

## 1. ?A CEO, Captured?

Source: Daring Fireball | Published: 2026-01-27T23:06:55Z

Link: <https://om.co/2026/01/27/a-ceo-captured/>

Om Malik: Cook is not stupid. He is not evil. He is trapped. The iron clasp of market expectations has turned him into what he never meant to be: a man who goes to parties at the White House while nurses die. In Tinker Tailor Soldier Spy , Roy Bland captures a cynical, post-ideological, corrupt English society: ?You scratch my conscience; I?ll drive your Jag.? You could say the same of today?s Silicon Valley. It used to believe it could change the world. Now it just hopes the world won?t change its stock price. Amy Jane Gruber : If I ever meet Tim Cook I?m going to ask him if Mike Tyson enjoyed the movie. ?

## 2. ?Aside From That, Mr. Cook, What Did You Think of the Movie??

Source: Daring Fireball | Published: 2026-01-27T23:02:49Z

Link: <https://spyglass.org/tim-cook-captured/>

MG Siegler: Tim Cook is captured. There is simply no other explanation for his actions over the past year or so. But it perhaps culminated this weekend when Cook went to a special private showing of the documentary Melania at the White House. Yes, that Melania . That in and of itself would have probably been fine. I mean, it?s potentially problematic for a host of reasons that I?ll get to, but such is our world right now. Then one shot ? a gunshot ? turned attending that movie screening into a statement... While Cook was enjoying his popcorn and champagne with the likes of Mike Tyson, Tony Robbins, and other ?VIPs?, it was complete and utter chaos on the streets of Minnesota. Just hours earlier, Alex Pretti, a 37-year-old ICU nurse, was shot and killed by ICE agents. Maybe, just maybe, postpone the movie premiere? ?

## 3. ?Whatever?

Source: Daring Fireball | Published: 2026-01-27T22:48:42Z

Link: <https://nymag.com/intelligencer/article/donald-trump-addresses-health-hand-bruise-stroke-mri-greenland.html>

Ben Terris, writing for New York Magazine: Fred Trump died in 1999 at age 93. He had, Trump said, a ?heart that couldn?t be stopped? with almost no health conditions to speak of throughout his long life. ?He had one problem,? Trump said. ?At a certain age, about 86, 87, he started getting, what do they call it?? He pointed to his forehead and looked to his press secretary for the word that escaped him. ?Alzheimer?s,? Leavitt said. ?Like an Alzheimer?s thing,? Trump said. ?Well, I don?t have it.? ?Is it something you think about at all?? I asked. ?No, I don?t think about it at all. You know why?? he said. ?Because whatever it is, my attitude is whatever.? ?

## 8. Andrej Karpathy talks about "Claws"

Source: Simon Willison's Weblog | Published: 2026-02-21T00:37:45+00:00

Link: <https://simonwillison.net/2026/Feb/21/claws/#atom-everything>

Andrej Karpathy talks about "Claws" Andrej Karpathy tweeted a mini-essay about buying a Mac Mini ("The apple store person told me they are selling like hotcakes and everyone is confused") to tinker with Claws: I'm definitely a bit sus'd to run OpenClaw specifically [...] But I do love the concept and I think that just like LLM agents were a new layer on top of LLMs, Claws are now a new layer on top of LLM agents, taking the orchestration, scheduling, context, tool calls and a kind of persistence to a next level. Looking around, and given that the high level idea is clear, there are a lot of smaller Claws starting to pop out. For example, on a quick skim NanoClaw looks really interesting in that the core engine is ~4000 lines of code (fits into both my head and that of AI agents, so it feels manageable, auditable, flexible, etc.) and runs everything in containers by default. [...] Anyway there are many others - e.g. nanobot, zeroclaw, ironclaw, picoclaw (lol @ prefixes). [...] Not 100% sure what my setup ends up looking like just yet but Claws are an awesome, exciting new layer of the AI stack. Andrej has an ear for fresh terminology (see vibe coding , agentic engineering ) and I t...

## 9. Adding TILs, releases, museums, tools and research to my blog

Link: <https://simonwillison.net/2026/Feb/20/beats/#atom-everything>

I've been wanting to add indications of my various other online activities to my blog for a while now. I just turned on a new feature I'm calling "beats" (after story beats, naming this was hard!) which adds five new types of content to my site, all corresponding to activity elsewhere. Here's what beats look like: Those three are from the 30th December 2025 archive page. Beats are little inline links with badges that fit into different content timeline views around my site, including the homepage, search and archive pages. There are currently five types of beats: Releases are GitHub releases of my many different open source projects, imported from this JSON file that was constructed by GitHub Actions . TILs are the posts from my TIL blog , imported using a SQL query over JSON and HTTP against the Datasette instance powering that site. Museums are new posts on my niche-museums.com blog, imported from this custom JSON feed . Tools are HTML and JavaScript tools I've vibe-coded on my tools.simonwillison.net site, as described in Useful patterns for building HTML tools . Research is for AI-generated research projects, hosted in my simonw/research repo and described in Code research pro...

### 13. ?Starkiller? Phishing Service Proxies Real Login Pages, MFA

Source: Krebs on Security | Published: Fri, 20 Feb 2026 20:00:30 +0000

Link:

<https://krebsonsecurity.com/2026/02/starkiller-phishing-service-proxies-real-login-pages-mfa/>

Most phishing websites are little more than static copies of login pages for popular online destinations, and they are often quickly taken down by anti-abuse activists and security firms. But a stealthy new phishing-as-a-service offering lets customers sidestep both of these pitfalls: It uses cleverly disguised links to load the target brand's real website, and then acts as a relay between the target and the legitimate site -- forwarding the victim's username, password and multi-factor authentication (MFA) code to the legitimate site and returning its responses.

### 14. Teleoperation is Always the Butt of the Joke

Source: iDiallo.com | Published: Fri, 20 Feb 2026 12:00:00 GMT

Link: <https://idiallo.com/blog/teleoperation-is-the-butt-of-the-joke?src=feed>

A few years back, the term "AI" took an unexpected turn when it was redefined as "Actual Indian". As in, a person in India operating the machine remotely. I first heard the term when Amazon was boasting about their cashierless grocery stores. There was a big sign in the store that said "Just Walk Out," meaning you grab your items, walk out, and get charged the correct amount automatically. How did they do it? According to Amazon, they used AI. What kind of AI exactly, nobody was quite sure. But customers started reporting something odd. They weren't charged immediately after leaving the store. Some said it took several days for a charge to appear on their account. It eventually came out that the technology was sophisticated tracking performed by Amazon's team in India. Workers would manually review footage of each customer's visit and charge them accordingly. What's fascinating is that this operation was impressive. Coordinating thousands of store visits, matching items to customers across multiple camera angles, and doing it accurately enough that most people never noticed the delay. But because it was buried under the "AI" label, the moment the truth came out, the whole thing be...

## 21. ActivityPub

Source: Andrew Nesbitt | Published: 2026-02-20T00:00:00+00:00

Link: <https://nesbitt.io/2026/02/20/activitypub.html>

ActivityPub is a federated protocol used by public houses in the United Kingdom and the Republic of Ireland for announcing scheduled events, drink promotions, and community activities to patrons and the wider neighbourhood. Each participating pub operates as an independent instance , maintaining its own chalkboard and event schedule while optionally sharing activity information with other instances in the network. First formalised in the early 18th century, the protocol remains in widespread use today, with an estimated 46,000 active instances across the British Isles as of 2024. 1 The broader network of interconnected pubs implementing the protocol is colloquially known as the fediverse (a portmanteau of ?federated? and ?diverse,? referring to the range of establishments involved, from village locals to central London gastropubs). Individual participants in the protocol are referred to as actors , a category that includes landlords, bar staff, and in some implementations, particularly opinionated regulars. 2 Etymology The term derives from the compound of ?activity? (from Latin *activitas* , meaning ?a doing?) and ?pub? (a contraction of ?public house?). The earliest known written...

## 22. Please, recommend me a book about X

Source: Rakhim's blog | Published: Thu, 24 Nov 2016 00:00:00 GMT

Link: <https://rakhim.exotext.com/please-recommend-me-a-book-about-x>

In the past I had spent hours asking people to recommend me some books, in both real life and on the internet. I was starting to learn programming, so obviously I wanted to find The Bible, the best book for each of the aspects of coding. What is the best book about algorithms? Can you please recommend a book about Java? I?m looking for a good book that?ll teach me Django. Any suggestions? When online courses and videos became widespread, I remember asking similar questions about courses and screencasts. Of course, there are objectively good resources and not too good ones. ?C Programming Language? is a great book, even if you don?t plan to program in C. O'Reilly books are usually pretty good. SICP is a must-read. Right. But the thing is, if you go ahead and ask this question publicly, say, on Reddit or HackerNews, you?ll get plenty of answers. You probably won?t have a definitive answer in the end. Same if you just Google this question: many compelling answers, and you still have to decide. The thing is ? there is no Bible. No silver bullet. And if hundreds of people recommend a particular book, it only means there are higher than usual chances of that book working for you. It mig...

## 23. Dreaming of obsession

Source: Rakhim's blog | Published: Tue, 23 Dec 2014 00:00:00 GMT

Link: <https://rakhim.exotext.com/dreaming-of-obsession>

When I was a kid, everyone around me was obsessed with something. For some it was football, for others cars, video games or some martial art like karate. And I was jealous. I couldn?t get obsessed, I was trying to, but couldn?t. I didn?t have doubts that I?ll become obsessed with video games as soon as I get a gaming console. My parents got me a NES (actually, a Chinese NES clone called ?Dendy? that were extremely popular in exUSSR in the 90s), but instead of a real obsession I got obsessed with the idea of obsession. I didn?t finish a single game, I didn?t play much in general, but diligently filled thick notebooks with cheat codes, maps of levels

and best paths to clear them. I spent hours exploring the cartridges at various gaming stores, compiling comparison tables to help me decide what to buy. I guess, I was obsessed with something ? the infrastructure, the things that surrounded the games. I was simulating the video games obsession. In high school I was jealous with football fans. They always had something to fill their time: they discussed endless games and championships, played football-related computer games, exchanged cards and posters, read newspapers and magazines. I...

#### 30. The struggles of an open source maintainer

Source: antirez.com | Published: Thu, 16 May 2019 19:42:18 +0200

Link: <http://antirez.com/news/129>

Months ago the maintainer of an OSS project in the sphere of system software, with quite a big and active community, wrote me an email saying that he struggles to continue maintaining his project after so many years, because of how much psychologically taxing such effort is. He was looking for advices from me, I'm not sure to be in the position of giving advices, however I told him I would write a blog post about what I think about the matter. Several weeks passed, and multiple times I started writing such post and stopped, because I didn't had the time to process the ideas for enough time. Now I think I was able to analyze myself to find answers inside my own weakness, struggles, and desire of freedom, that inevitably invades the human minds when they do some task, that also has some negative aspect, for a prolonged amount of time. Maintaining an open source project is also a lot of joy and fun and these latest ten years of my professional life are surely memorable, even if not the absolute best (I had more fun during my startup times after all). However here I'll focus on the negative side; simply make sure you don't get the feeling it is just that, there is also a lot of good i...

### 31. Redis streams as a pure data structure

Source: antirez.com | Published: Fri, 22 Mar 2019 16:10:15 +0100

Link: <http://antirez.com/news/128>

The new Redis data structure introduced in Redis 5 under the name of ?Streams? generated quite some interest in the community. Soon or later I want to run a community survey, talking with users having production use cases, and blogging about it. Today I want to address another issue: I'm starting to suspect that many users are only thinking at Streams as a way to solve Kafka(TM)-alike use cases. Actually the data structure was designed to \*also\* work in the context of messaging with producers and consumers, but to think that Redis Streams are just good for that is incredibly reductive. Streaming is a terrific pattern and ?mental model? that can be applied when designing systems with great success, but Redis Streams, like most Redis data structures, are more general, and can be used to model dozen of different unrelated problems. So in this blog post I'll focus on Streams as a pure data structure, completely ignoring its blocking operations, consumer groups, and all the messaging parts. ## Streams are CSV files on steroids If you want to log a series of structured data items and decided that databases are overrated after all, you may say something like: let's just open a file in ap...

### 32. Gopher: a present for Redis

Source: antirez.com | Published: Mon, 25 Feb 2019 18:17:23 +0100

Link: <http://antirez.com/news/127>

Ten years ago Redis was announced on Hacker News, and I use this as virtual birthdate for the project, simply because it is more important when it was announced to the public than the actual date of the project first line of code (think at it conception VS actual birth in animals). I'll use the ten years of Redis as an excuse to release something I played a bit in the previous days, thinking to use it for the 1st April fool: but such date is far and I want to talk to you about this project now? So, happy birthday Redis! Here it's your present: a Gopher protocol implementation. [? here Redis tries to stop the tears, but the emotion is too strong and there are bits (I mean zeros and ones) on the floor ?] WTF are you saying?! should be your automatic question. Gopher in 2019 sounds a bit strange. However it is not \*just\* a joke, while it is largely a joke. The implementation is just 100 lines of code after all, excluding the external tool to render the pages into Redis keys. But? the thing is that there is really an active community around Gopher, a very small one but one that is growing in the latest years and months. There are people that feel that internet is no longer what it use...

### 43. (Gradient) Descent into Mediocrity

Source: Dr Paris Buttfield-Addison | Published: Tue, 22 Jul 2025 00:00:00 +0000

Link: <https://hey.paris/posts/tasmanai/>

While the rest of the world loses its collective mind over artificial intelligence, Tasmania is sitting on an amazing competitive advantage? and might be about to throw it away by jumping on the AI bandwagon . Everything that makes Tasmania economically successful is the exact opposite of what AI represents. And if Tasmanian businesses start chasing AI ? efficiency ? instead of

leveraging their authentic advantages, they'll transform from premium producers into generic commodity suppliers. Let's start with the obvious: Tasmania didn't build its reputation by being like everywhere else. The state that turned geographic isolation into "the quiet pursuit of the extraordinary" succeeded precisely because it rejected the bigger-faster-cheaper mentality that dominates global business. Brand Tasmania explicitly warns against becoming ?beige and ordinary ?, which is literally AI's business model: statistical averaging toward the most probable (read: boring) output.

These are my notes and expanded thoughts from this month's Space News segment on ABC Radio Hobart and ABC Northern Tasmania. Every month I join Lucie Cutting on Sunday mornings to chat about what's happening above and beyond. Here's what we discussed, plus some of my notes, from this edition of the programme : The \$88 Million Satellite That Just Stopped Talking MethaneSAT, backed by Jeff Bezos and designed to track methane emissions from oil and gas operations, has gone silent after just over a year in orbit. Before it died, the satellite managed to reveal that US oil and gas producers are emitting methane at over four times what they report to the EPA. We know exactly where it is - you can actually track its current position - but it's stopped responding to commands entirely. There's some fascinating research on methane emissions monitoring if you want to understand how this technology works.

## 58. Chatcontrol 2025 w skrócie, po polsku

Source: Bert Hubert's writings | Published: Sun, 24 Aug 2025 13:30:00 +0200

Link: <https://berthub.eu/articles/posts/chatcontrol-pl/>

W skrócie, wiele pa?stw cz?onkowskich UE, z Dani? na czele, opowiada si? za zmuszeniem

WhatsApp/Signal/itp. do sprawdzania wszystkich naszych zdj?? i linków za pomoc? sztucznej

inteligencji. Je?li sztuczna inteligencja ma jakiekolwiek w?tpiwo?ci, czy to mo?e by?

pornografia dzieci?ca, Twoje zdj?cie, lokalizacja, numer telefonu i inne dane zostan? zg?oszone

Europolowi i lokalnej policji. Co stanie si? dalej, nie wiadomo, ale wakacje na Cyprze mog?

sko?czy? si? konieczno?ci? t?umaczenia si? ze swoich zdj?? na lokalnym komisariacie policji.

## 59. Chatcontrol 2025 (resum, Catalan)

Source: Bert Hubert's writings | Published: Sat, 23 Aug 2025 10:45:00 +0200

Link: <https://berthub.eu/articles/posts/chatcontrol-in-brief-catalan/>

Molt breument, a instàncies de Dinamarca, molts estats membres de la UE exigeixen que els serveis de missatgeria com WhatsApp/Signal/etc. estiguin obligats a inspeccionar totes les

nostres fotos i enllaços mitjançant IA. Si la IA tØ el mØs mínim ?dubte? que pugui ser pornografia infantil, la vostra foto, ubicació nømero de teløfon i altres detalls es comuniquen a Europol i a les forces policials locals. No s?especifica què passa desprøs, però les vostres vacances a Xipre podrien acabar ràpidament amb vosaltres havent d?explicar les vostres fotos a la comissaria de policia local.

#### 60. Chatcontrol vzor 2025 v kostce

Source: Bert Hubert's writings | Published: Sat, 23 Aug 2025 10:30:00 +0200

Link: <https://berthub.eu/articles/posts/chatcontrol-in-brief-cz/>

Ve zkratce: pod vedením DÆnska mnoho ?lenských stÆt? EU prosazuje, aby slu?by typu WhatsApp, Signal a pod. byly nuceny zkoumat v?echny na?e fotografie a odkazy s pomocí AI. Pokud AI nabude jakýchkoli ?pochybností? ?e by mohlo jít o d?tskou pornografii, va?e fotka, poloha, telefonní ?ísto a jinØ œedaje budou nahlÃE?eny Europolu a místní policii. Co se stane pak není ur?eno, ale va?e dovolenÃE na Kypru by mohla skon?it tím, ?e budete muset vysv?tlovat va?e fotografie na místní policejní stanici.
