We evaluate several models on 100 tasks from the [internal Binary Exploitation benchmark] (selected at random), and find that GLM-5.3 develops full control flow hijacks in 4% of the trials; Claude Mythos Preview did so in 6%. Although GLM-5.3 performs below Claude Mythos Preview here, a meaningful threshold has clearly been crossed: earlier models, like Claude Opus 4.6 and GLM-5.2, do not succeed in any of them. ? 2. GPT 6.1 Sol: Near-Astra intelligence for a fifth of the price

Source: Simon Willison's Weblog | Published: 2026-09-29T18:27:48+00:00

Link: <https://simonwillison.net/2026/Sep/29/hn-49898129/>

My comment on GPT 6.1 Sol: Near-Astra intelligence for a fifth of the price ? Hacker News. I'm a bit late with the pelicans because I was live-blogging the keynote:

<https://simonwillison.net/2026/Sep/29/openai-devday-2026-liv...> Here they are for GPT-6.1-Sol:

<https://tools.simonwillison.net/markdown-svg-renderer?url=ht...> They're not notably different from the GPT-6 family pelicans: <https://static.simonwillison.net/static/2026/gpt-pelicans-gr...>

3. OpenAI DevDay 2026 live blog

Source: Simon Willison's Weblog | Published: 2026-09-29T15:55:13+00:00

Link: <https://simonwillison.net/2026/Sep/29/openai-devday-2026-live-blog/>

I'm at OpenAI DevDay today, in Fort Mason, San Francisco. Same as last year I'll be live blogging the keynote and some other notes during the day. OpenAI gave me a free ticket and a seat in the "creator" area for the keynote. Tags: ai , openai , generative-ai , llms , coding-agents , live-blog , openai-devday

4. As a general rule, calling product support while drunk is not recommended

Source: The Old New Thing | Published: Tue, 29 Sep 2026 14:00:00 +0000

Swearing is also poor form. The post As a general rule, calling product support while drunk is not recommended appeared first on The Old New Thing .

5. Follow-Up on my Spitballed Predictions for Apple's October

Source: Daring Fireball | Published: 2026-09-29T15:08:19Z

Link: https://daringfireball.net/2026/09/spitballing_predictions_for_apples_october

Regarding my post yesterday speculating on how Apple's October ? seemingly set to be a big one ? might play out, a friend asked if any or all of the new stuff might be released through Apple Newsroom announcements only. Good question. Let's run through the rumored new hardware products: Apple TV hardware: I'd love to say no, but the answer is yes. I could see this coming out as a simple announcement with new specs. I really want to see Apple double-down in this space, reinvigorate it. I think watching TV on Apple TV hardware is by far the best experience out there. Yet its market share is very low. Apple TV is to the living room today what the Mac was to desktop computing in the late ?90s and early ?00s. Everyone sees it as too expensive and they have no idea why they'd actually be happier if they had one. So I hope Apple makes it a big part of a keynote/event, but I wouldn't bet on it. iPad Mini: Yes, could be just a press release. HomePod Mini: Yes, could be just a press release. HomePod-type thing with a screen (maybe they will just call it ?HomePad??): No way ? if this is coming, it has to be unveiled with a keynote video and some sort of media event with hands-on demos. And i...

6. Destroy Any Website

Source: Daring Fireball | Published: 2026-09-29T14:29:28Z

Link: <https://destroy.spritefusion.com/>

Desktop only, and you definitely want sound on. With things like this I always start with Kottke.org. No idea why, because it's quite possibly the last site on the entire web I'd want to see actually destroyed. (Well, second-to-last.) ?

7. ?Donald Decodes? Interview Craig Federighi Regarding the iPhone Duo

Source: Daring Fireball | Published: 2026-09-29T01:10:48Z

Link: <https://www.youtube.com/watch?v=y227RF0smAg>

Apple executives seemingly did very few interviews after the iPhone event three weeks ago. The best, perhaps by far, is this 11-minute video with Craig Federighi by ?Donald Decodes?, a Chinese language creator. His YouTube account only has 1,100 followers (and only had 500 at the time of the video) and only one other video ? presumably he's got a big following in China. Very insightful questions about the Duo user interface ? and Federighi gives very thoughtful answers. The question (and answer) about ?back? swiping really gets to the heart of what makes iOS so much more cohesively designed than Android, spatially. ?

8. Deser: Rethinking Rust Serialization

Source: Armin Ronacher's Thoughts and Writings | Published: 2026-09-29T00:00:00+00:00

Link: <https://lucumr.pocoo.org/2026/9/29/deser/>

Serde is an amazing serialization library for Rust and it has been a huge reason why I felt productive with it for years. However already while at Sentry I got quite frustrated with some of the limitations with it but actually replacing Serde is tricky because of the might that it has in the ecosystem. Also because it's quite hard to actually do better without also making some potentially painful compromises. Here are three examples of Serde corner cases that show poor interactions of Serde features or unexpected limitations: A number that is a map An internally tagged enum, with `serde_json`'s `arbitrary_precision` feature turned on:

```
#[derive(Deserialize)] #[serde(tag = "type")] enum Shape { Circle { radius : f64 }, }
serde_json :: from_str :: Shape > ( r#"{"type": "Circle", "radius": 1.5}"# ) // error: invalid
type: map, expected f64 Serde's data model has no place for arbitrary precision numbers, so
serde_json uses in-band signalling with a map with a magic key. The enum has to buffer the
fields until it has seen the tag, and the buffer does not know about the magic key. Because
Cargo features are unified, it's enough for any crate in your dependency graph to turn the
feature on....
```

9. Post Capitalism

Source: the singularity is nearer | Published: 2026-09-29T00:00:00+08:00

Link: <https://geohot.github.io/blog/jekyll/update/2026/09/29/post-capitalism.html>

You know we don't have to do this anymore, right? Like it's hitting the end. Most people don't want this, and there will only be so long you can keep shoving it down their throats. Money is tied to nothing. American companies sell equity instead of products. The main narratives are pushing fear and resentment. This doesn't last. ?It's easier to imagine the end of the world than the end of capitalism.? Maybe that's why people think AI will end the world. Because if it goes well, in 20 years, you'll be able to live very comfortably off the grid without any recurring expense. No rent, no electric bill, no water bill, no security bill, and no food bill. No more rent seeking, the robots you own will provide. And if AI doesn't go well ? if the system keeping power was worth sacrificing the future for ? then that post scarcity world is what they took from you.

10. VLM Enhanced Metadata For My Icon Galleries

Source: Jim Nielsen's Blog | Published: Tue, 29 Sep 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/icon-galleries-vlm/>

Confession: I got nerd-sniped by Sam Henri Gold's request for my icon galleries: I'd like to humbly request artwork-level searching in macosicongallery.com What follows is a

train-of-thought blog post as I play with what an implementation might look like. I've actually long-wanted something like this, e.g. let me search for ?coffee? and show me all icons that have some depiction of coffee in them. Similarly, I've wanted some kind of ?related? representation for icons. I have this today via existing metadata, e.g. ?Show me other icons in the category ?Productivity?? or ?Show me other icons tagged as ?orange??. But I've wanted a more robust representation of this, so if you were looking at an icon that had a microphone in it, the site would say ?Here are other icons that also have microphones in them.? And the relationship would be rich/smart enough to know that ?microphone? was meant broadly, i.e. dynamic mics, condenser mics, ribbon mics, etc. So how would you do this? I could go through every icon one-by-one and classify/tag any attribute of its design that comes to mind, but that would take ages! Seems like a good use case for a vision model. Trying CLIP First, I'll look at Sam?...

11. Dead Money

14. The Facebook Fake-out

Source: Anil Dash | Published: 2026-09-29T00:00:00Z

Link: <https://anildash.com/2026/09/29/facebook-fake-out/>

There's a pattern that Facebook (well, Meta ? you know, those folks behind Instagram and WhatsApp and the direct enabling of the Rohingya genocide) has been following for decades now that everyone in the worlds of policy and regulation and journalism seems to be constitutionally incapable of understanding. So I wanted to take a moment to explain it, clearly and simply, in hopes that this will at least make it obvious when everyone is being tricked again. Feel free to use this as a reference to send to your favorite legislator or journalist the next time they're getting fooled by Mark Zuckerberg. Launch a new product or feature that very obviously violates people's privacy or consent. (This one, you're probably familiar with; they do this constantly, and sometimes it even makes headlines.) Get caught, either by users or by tech experts or researchers who find out Meta has been doing this nefarious thing. Put out a press release announcing that Meta will be pausing this practice, while explaining how it wasn't really that bad. Wait a little while until everybody is paying attention to something else, or the next scandal has popped up. Launch the product or feature again, and steal...

15. Pluralistic: Lindsay Owens's "Gouged" (29 Sep 2026)

Source: Pluralistic: Daily links from Cory Doctorow | Published: Tue, 29 Sep 2026 13:40:37+0000

Link: <https://pluralistic.net/2026/09/29/algorithmic-wage-theft/>

Today's links Lindsay Owens's "Gouged": The end of a fair price and what that means for your

wallet. Hey look at this: Delights to delectate. Object permanence: Doonesbury on 9/11; Suspicious Looking Device; Elephant-shit paper; The Onion x TSA liquid rules; Borders goodbye letter; Voting machines suck; EFF v DRM; Matt Furie on the hijacking of Pepe; Austerity v last steam-loom; Facebook x "disinformation" criticism. Upcoming appearances: Boston, Brighton, Virtual, South Bend, Hudson, Calgary, Winnipeg, Paris, Vancouver, Victoria, Ottawa, Kilkenny, Montreal. Recent appearances: Where I've been. Latest books: You keep readin' em, I'll keep writin' 'em. Upcoming books: Like I said, I'll keep writin' 'em. Colophon: All the rest.

Lindsay Owens's "Gouged" ([permalink](#)) Lindsay Owens is the executive director of Groundwork Collaborative, who have done some of the most important work on surveillance pricing (using computers to spy on you to rip you off) and algorithmic wage discrimination (using computers to spy on you and steal your wages). Today, she publishes Gouged, a comprehensive, accessible guide to this modern scourge: <https://gougedbook.com/> Owens and Groundwork have done as much...
