1. U.K. Sanctions Cryptomus for RU Money Laundering
Source: Krebs on Security | Published: Wed, 14 Oct 2026 14:22:49 +0000
Link: https://krebsonsecurity.com/2026/10/u-k-sanctions-cryptomus-for-ru-money-laundering/
The United Kingdom has issued economic sanctions against Cryptomus, a chameleonic cryptocurrency platform that experts say serves as a major conduit for payments related to ransomware, narcotics, darknet markets, fraud and cybercrime services that are helping Russia circumvent existing financial restrictions.

2. Tree Appreciator
Source: Simon Willison’s Weblog | Published: 2026-10-14T21:23:01+00:00
Link: https://simonwillison.net/2026/Oct/14/tree-appreciator/
Tool: Tree Appreciator Another game experiment with Claude. This one used the default Claude iPhone app (chat mode, not Claude Code mode), where I prompted Claude Opus 5.5 Max with: Build a three js game called "Tree appreciator" - it shows you two algorithmically generated trees and the game mechanics is about appreciating the differences between them. Think hard about how to make sure it is both fun and beautiful. Somewhat embarrassingly given my recent talk , I’ve found that telling Opus 5.5 "make sure it is fun" works uncomfortably well. In this case Claude crunched for 3 hours and 7 minutes before retuning a cosy little spot-the-difference game with music and animation and achievements that’s quite compelling to play. 3. AI is mass decompiling games. That’s both awesome and scary.
Source: Simon Willison’s Weblog | Published: 2026-10-14T16:26:53+00:00
Link: https://simonwillison.net/2026/Oct/14/ai-is-mass-decompiling-games/
AI is mass decompiling games. That’s both awesome and scary. Indie game developer Popcar talks about the recent wave of AI-powered decompilation of existing games, enabling weird mashups between existing games, and producing a boom in game preservation projects to get old games working on new hardware (often in a browser using WebAssembly). I like how this piece captures both the positives and the negatives of this new development: Most people already realized the scary part by now. If AI can decompile games and software, then the entire tech industry is about to explode. Anybody can decompile other software and use it any way they’d like, and nobody can stop them. Companies can steal from competitors. Your paid game or app can be open-sourced against your will. This isn’t exclusive to old video games, we can apply this to any software. [...] This is also a big win for preservation. Old games can be ported, modified, enhanced, and made much more easily accessible than before. [...[With console makers going all in on digital and games becoming entirely unplayable due to servers shutting down, this is fantastic news. We could own software we bought regardless of what the company th...

4. web-edit 0.1a1
Source: Simon Willison’s Weblog | Published: 2026-10-13T01:40:05+00:00
Link: https://simonwillison.net/2026/Oct/13/web-edit/
Release: web-edit 0.1a1 Includes performance optimizations written by Claude Opus 5.5 after I fed it this Python 3.15 profiling report generated by GPT-6 Astra. Tags: profiling , projects

5. Formlabs dropped the Raspberry Pi on the way to a $699 SLA printer
Source: Jeff Geerling | Published: Wed, 14 Oct 2026 08:00:00 -0500
Link: https://www.jeffgeerling.com/blog/2026/formlabs-form-studio-1-resin-printer/
Formlabs sent me a Form Studio 1 resin 3D printer to test after years of back-and-forth about their Form 4 printer. Like the Form 4, it’s an SLA (stereolithography) printer, but unlike the Form 4 (which starts at $2,600), it’s affordable for a hobbyist. It’s not cheap , coming in at $699 (or $749 with a flex build platform, which I highly recommend), but it is affordable. I can’t say as much about this printer as people who are well-versed in resin printing and use

other SLA printers (all my experience until now is with FDM, or Fused Deposition Modeling 1 , printers). But I can convey my first-time experience using this printer and with the entire SLA experience.

6. [Sponsor] WorkOS AuthKit: Auth for Your App, Free Up to 1M Monthly Active Users
Source: Daring Fireball | Published: 2026-10-14T21:03:43Z

Login looks simple until you?re building password resets, email verification, MFA, social providers, session management, and the enterprise SSO your first big customer asked for last week. AuthKit lets you: Offer SSO, MFA, passkeys, passwords, email codes, and social sign-in Add and remove users automatically with SCIM provisioning Track who did what with audit logs Try AuthKit ? ?

7. The FBI Arrested a Saudi National OpenAI Employee for Planting a Recording Device in the Company?s Executive Conference Room
Source: Daring Fireball | Published: 2026-10-14T20:58:01Z
Link: https://www.justice.gov/opa/pr/saudi-national-arrested-installing-surreptitious-audio-recording-device-openai
The Department of Justice, yesterday: An employee of OpenAI has been arrested for and charged with using or endeavoring to use an electronic, mechanical, or other device to intercept oral communications. Abdulrahman Alfozan, 35, a national of the Kingdom of Saudi Arabia, was arrested on Oct. 9, and made his initial appearance in federal court today. ?This serious situation underscores why winning the global super intelligence race is a national security prerogative ? and why President Trump?s leadership in creating the Super Intelligence Force is so important,? said Director of National Intelligence Jay Clayton. ?I thank Director Patel and our FBI partners for their diligence and swift action. The intelligence community remains committed to safeguarding America?s cutting-edge intellectual property from foreign threats.? ?According to the complaint unsealed today, Abdulrahman Alfozan allegedly concealed a covert recording device inside his employer?s executive conference room to secretly capture sensitive communications about the company?s super intelligence technology,? said FBI Director Kash Patel. ?Protecting American SI innovation is essential to safeguarding our nation?s econo...

8. LaTeX package for Pascal-like triangles
Source: John D. Cook | Published: Wed, 14 Oct 2026 17:58:07 +0000
Link: https://www.johndcook.com/blog/2026/10/14/latex-package-for-pascal-like-triangles/
When I wrote about the harmonic triangle yesterday, I displayed the triangle left-aligned using fixed-width text because that was easier than producing the format you usually see for Pascal?s triangle and related triangles. 1 1/2 1/2 1/3 1/6 1/3 1/4 1/12 1/12 1/4 1/5 1/20 1/30 1/20 1/5 ? I asked Claude to write a [?] The post LaTeX package for Pascal-like triangles first appeared on John D. Cook .

9. A generalization of the Pythagorean theorem
Source: John D. Cook | Published: Wed, 14 Oct 2026 11:11:11 +0000
Link: https://www.johndcook.com/blog/2026/10/14/pythagorean-variation/
G. D. Chakerian [1] discovered the following generalization of the Pythagorean theorem. Take any triangle and attach squares to each side. From each triangle vertex, extend a line perpendicular to the opposite side and extend the line through the square, as shown in the figure below. Then the areas of the rectangles with the same [?] The post A generalization of the Pythagorean theorem first appeared on John D. Cook .

10. Poe, Bessel, and Drones
Source: John D. Cook | Published: Wed, 14 Oct 2026 10:00:22 +0000
Link: https://www.johndcook.com/blog/2026/10/14/poe-bessel-and-drones/
What?s a connection between Edgar Allan Poe and Friedrich Wilhelm Bessel? Poe?s story The Pit and the Pendulum describes a pendulum with a semicircular blade being lowered on a cable. This

is an interesting variation on the usual harmonic oscillator because the length L of the pendulum is not constant but rather an increasing function [?] The post Poe, Bessel, and Drones first appeared on John D. Cook .

11. "No way to prevent this" say users of only language where this regularly happens
Source: Xe Iaso's blog | Published: Wed, 14 Oct 2026 00:00:00 GMT
Link: https://xeiaso.net/shitposts/no-way-to-prevent-this/memory-safety/CVE-2026-92392/
In the hours following the release of CVE-2026-92392 for the project curl , site reliability workers and systems administrators scrambled to desperately rebuild and patch all their systems to fix a use-after-free in HTTP/2 upload retries where cleanup turns leftover upload data into a new request and leaves a pointer to a freed Curl_easy handle (apparently freeing it was only a suggestion), allowing a malicious server to achieve remote code execution under specific conditions . This is due to the affected components being written in C, the only programming language where these vulnerabilities regularly happen. "This was a terrible tragedy, but sometimes these things just happen and there's nothing anyone can do to stop them," said programmer Ms. Odie Leuschke, echoing statements expressed by hundreds of thousands of programmers who use the only language where 90% of the world's memory safety vulnerabilities have occurred in the last 50 years, and whose projects are 20 times more likely to have security vulnerabilities. "It's a shame, but what can we do? There really isn't anything we can do to prevent memory safety vulnerabilities from happening if the programmer doesn't want to w...

12. The Internet of Very Cheap Things
Source: Terence Eden?s Blog | Published: Wed, 14 Oct 2026 11:34:08 +0000
Link: https://shkspr.mobi/blog/2026/10/the-internet-of-very-cheap-things/
Twelve years ago, I was complaining that IoT devices were too expensive. Last week I bought a colour changing Zigbee lighbulb for £4. Not a typo - less than a fiver. While the aipocalypse is devouring RAM with its insatiable appetite, Moore's Law appears to be keeping up its end of the bargain when it comes to domestic gadgetry. This blog posts compares today's prices with those from a little ?

13. The still unregulated solar power clouds: notes from 9th E.DSO ? EE-ISAC - ENCS ? ENISA Cybersecurity Forum
Source: Bert Hubert's writings | Published: Wed, 14 Oct 2026 15:30:00 +0200
Link: https://berthub.eu/articles/posts/solar-nightmare-at-the-conference/
Last week I attended the 9th E.DSO ? EE-ISAC - ENCS ? ENISA Cybersecurity Forum in Brussels. And as I had nothing to present, I tried to make myself useful by writing up an apparently well read live-blog (better version below!). At this conference, hashtag #CyberGrids26, all relevant people were present. Regulators, European Commission, electricity generators, the organizations that transmit and distribute the power, vendors, researchers, standardization bodies: basically everyone.
