

1. sqlite AGENTS.md

Source: Simon Willison's Weblog | Published: 2026-05-27T23:44:37+00:00

Link: <https://simonwillison.net/2026/May/27/sqlite-agents/#atom-everything>

sqlite AGENTS.md SQLite gained an AGENTS.md file five days ago - but it's not intended for their own development, it's presumably aimed at people who are pointing agents at the SQLite codebase. It includes: SQLite does not accept pull requests without prior agreement and/or accompanying legal paperwork that places the pull request in the public domain. However, the human SQLite developers will review a concise and well-written pull request as a proof-of-concept prior to reimplementing the changes themselves. SQLite does not accept agentic code. However the project will accept agentic bug reports that include a reproducible test case. Patches or pull requests demonstrating a possible fix, for documentation purposes, are welcomed. The most recent commit to that file removed the word "(currently)" from "SQLite does not accept agentic code, with the commit message "Strengthen the statement about not accepting agentic code". Meanwhile the SQLite forum was being flooded with so many AI-generated bug reports - of varying quality - that they've now split those off into a new SQLite Bug Forum . D. Richard Hipp is resolving issues on there with a flurry of commits to the codebase. Via Alex...

2. I think Anthropic and OpenAI have found product-market fit

Source: Simon Willison's Weblog | Published: 2026-05-27T16:38:35+00:00

Link: <https://simonwillison.net/2026/May/27/product-market-fit/#atom-everything>

Anthropic are strongly rumored to be about to have their first profitable quarter. Stories are circulating of companies surprised at how expensive their LLM bills are becoming from usage by their staff. I think this is because OpenAI and Anthropic have both found product-market fit. Enterprise customers are now paying API prices I think they've found product-market fit And they're ramping up The AI-failure stories around this are pretty thin We also know the labs are spending a lot API revenue is becoming less important April is a new inflection point Enterprise customers are now paying API prices I currently subscribe to the \$100/month Max plan from Anthropic and the \$100/month Pro plan from OpenAI. If you are a heavy user of coding agents these plans are a fantastic deal. I just ran the ccusage tool on my laptop to get an estimate of how much I would have spent if I were to pay for API tokens in the past 30 days and got: \$1,199.79 for Anthropic Claude Code \$980.37 for OpenAI Codex That's \$2,180.16 worth of tokens for \$200 - not bad at all! I'm a moderately heavy user of these tools, but I'm certainly not running agents every hour of the day and night. I had assumed that companie...

4. ?AI, ?Humanity?, and Dr. Manhattan Syndrome?

Source: Daring Fireball | Published: 2026-05-18T16:21:35Z

Link: <https://www.personfamiliar.com/p/ai-humanity-and-dr-manhattan-syndrome>

Jim Prosser, back in February: Let me be clear about causation, because the AI parallel only works if we're honest about it. The communications failures didn't kill nuclear power. The disasters did. But two decades of talking over the public meant the industry had built precisely zero reservoir of human-scale trust to draw on when the real crises hit. Nuclear pioneer Alvin Weinberg admitted in 1976 (three years before Three Mile Island) that ?the public perception and acceptance of nuclear energy appears to be the question that we missed rather

badly.? After TMI and Chernobyl confirmed the public?s worst suspicions, over a hundred planned U.S. reactors were cancelled. The entire essay is very good, quite thought provoking. But it really shines in drawing the parallels to nuclear power a generation ago, and the need to communicate the benefits to ordinary people in ways that they actually care about. Regarding OpenAI co-founder Greg Brockman: But think about what the people behind those numbers are actually worried about. They?re not anxious about AI in the abstract, per se , but its implications. They?re anxious about their job, their kid?s homework, their creative work getting sc...

5. The Alaska Permanent Fund as Loose Precedent for AI Data Center ?UBI? Payments

Source: Daring Fireball | Published: 2026-05-18T15:34:47Z

Link: https://en.wikipedia.org/wiki/Alaska_Permanent_Fund

Wikipedia: The Alaska Permanent Fund (APF) is a constitutionally established permanent fund and sovereign wealth fund managed by a state-owned corporation, the Alaska Permanent Fund Corporation (APFC). It was established in Alaska in 1976 by Article 9, Section 15 of the Alaska State Constitution under Governor Jay Hammond and Attorney General Avrum Gross. [...] As of 2019, the fund was worth approximately \$64 billion that has been funded by oil and mining revenues and has paid out an average of approximately \$1,600 annually per resident (adjusted to 2019 dollars). The main use for the fund?s revenue has been to pay out the Permanent Fund Dividend (PFD), which many authors portray as the only example of a basic income in practice. [...] The PFD is a Basic Income in the form of a resource dividend. Some researchers argue, ?It has helped Alaska attain the highest economic equality of any state in the United States...

And, seemingly unnoticed, it has provided unconditional cash assistance to needy Alaskans at a time when most states have scaled back aid and increased conditionality.? Alaska is not exactly a left-wing state. Again , money talks. ?

6. AI Data Centers Are Deeply Unpopular, Across the Political Spectrum

Source: Daring Fireball | Published: 2026-05-18T14:59:59Z

Link: <https://news.gallup.com/poll/709772/americans-oppose-data-centers-area.aspx>

Jeffrey M. Jones, Gallup: Seven in 10 Americans oppose constructing data centers for artificial intelligence in their local area, including nearly half, 48%, who are strongly opposed. Barely a quarter favor these projects, with 7% strongly in favor. [...] The data center question parallels the wording Gallup uses to ask about local nuclear power plant construction . In the same March survey, 53% of Americans say they oppose building a nuclear energy plant in their area, far less than the 71% opposed to data center construction. Since Gallup first asked the nuclear power plant question in 2001, the high point in opposition has been 63%. It?s hard to overstate how unpopular this polling paints AI data centers. It?s just an absolute messaging and marketing disaster for the entire tech industry. Tellingly, the anti-AI-data-center sentiment is bipartisan: There are partisan differences, but only in slight degree. A savvy politician or party could grab this issue and carve out a broadly bipartisan anti-data-center, anti-AI message. US politics is so polarized in today?s era that the salience of this issue will not go unnoticed. The only thing the hyperscalers have on their side is money...

AI is great when it extends your brain. It gets dangerous when it quietly replaces the part that was supposed to think.

11. CHAOSS Metrics in 2026

Source: Andrew Nesbitt | Published: 2026-05-27T10:00:00+00:00

Link: <https://nesbitt.io/2026/05/27/chaoss-metrics-in-2026.html>

The CHAOSS project has spent the last eight years writing down careful, implementation-agnostic definitions for the things people measure about open source projects: how many issues get opened, how long they take to close, how many distinct people commit, how stale the dependencies are. The point of writing them down is that two dashboards computing ?issue response time? should at least be computing the same thing, and the released metric set has become the closest thing the field has to a shared vocabulary. Most of those definitions were drafted between roughly 2018 and 2023, against a background where contributions were produced at human speed, security advisories arrived a few times a year per ecosystem, and a maintainer who stopped maintaining usually stopped committing too. All three of those conditions are changing, and a lot of the metric definitions encode them without saying so. The common thread is that most of the catalogue counts repository events, and event counts were informative because producing an event used to cost a person something. An issue cost someone ten minutes to write up, a PR cost someone an afternoon. That cost is being removed from one side of the int...

12. My views on some Python LSP servers in GNU Emacs (as of mid 2026)

Source: Chris's Wiki :: blog | Published: 2026-05-27T02:07:26Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/python/PythonLSPServersInEmacs-2026>

Some languages have to make do with one LSP server. By contrast, Python has an embarrassment of riches; I know of at least five modern LSP servers for it. I've recently been experimenting with some of them in GNU Emacs, specifically Eglot , so before I forget I want to note down my views. The five Python things with LSP servers that I believe are modern and current are python-lsp-server ('pylsp'), Facebook's pyrefly , Astral's ty , Microsoft's pyright, and technically Astral's ruff . The easiest to talk about is ruff , because it's not intended as a

full-featured LSP server that does everything; instead it only does code diagnostics and formatting, and you need another LSP server for code navigation. Currently Eglot doesn't easily support multiple LSP servers and code navigation is a lot of what I care about, so direct use of ruff is off the table for me. Also off the table is pyright, since I don't have any interest in touching a Microsoft Python project or finding out how badly it works with anything other than VS Code (although there's basedpyright as a less-Microsofted pyright option). Python-lsp-server is my default choice and is a solid basic LSP server with the code navigat...

13. Gadget Review: Chuwi Minibook X N150 + Linux ?????

Source: Terence Eden's Blog | Published: Wed, 27 May 2026 11:34:36 +0000

Link: <https://shkspr.mobi/blog/2026/05/gadget-review-chuwi-minibook-x-n150-linux/>

At FedMart, the discount chain Sol Price built in 1950s San Diego, you could buy a can of WD-40 in one size, the big one, and that was the end of the conversation. Anyone who wanted the small can went without. Price called it the intelligent loss of sales: carry

15. Resurfacing posts

Source: Herman's blog | Published: 2026-05-27T06:50:30.820218+00:00

Link: <https://herman.bearblog.dev/resurfacing-posts/>

One of the things I like best about blogs is that posts stick around (or at least they should). I enjoy scrolling through historic posts of bloggers and reading about what they were thinking about 1, 5, or even 10 years ago?if I'm lucky. I've noticed that my most recent posts get the more attention than the rest of my blog. This makes sense, as I have the most recent 5 posts on my homepage, alongside the fact that newer posts go out to my email subscribers and are more likely to find themselves on link aggregators, Twitter feeds, and RSS readers. I'd like to take this opportunity to resurface some posts you may have missed, or may enjoy revisiting. I also encourage you, if you happen to be a blogger, to do the same. There's so much great writing buried by more recent posts that could do with some additional attention. This is also the reason I've added a Random tab to the discovery feed. I recently got back from a month-long trip to Japan where Emma and I visited some of the big cities, but spent most of our time in rural Japan and hiked a well-preserved portion of the Nakasendo trail. While in Japan, I had the privilege of meeting up with some bloggers: Seio for some tea in a lov...

16. SQLAlchemy 2 In Practice - Solutions to the Exercises

17. Het Solvinty besluit in detail, en de mogelijke gevolgen

Source: Bert Hubert's writings | Published: Wed, 27 May 2026 10:00:00 +0200

Link: <https://berthub.eu/articles/posts/het-solvinty-besluit-gevolgen/>

Gisteren verscheen de brief waarmee de staatssecretaris van Economische Zaken en Klimaat liet weten dat ze de overname van Solvinty door Kyndryl ging verbieden. Een forse cast mensen, waaronder 200.000 ondertekenaars van een petitie, hebben geholpen de zorgen over deze overname

bovenop de stapel te krijgen. Ook heeft de nieuwe stichting The Firewall juridisch van zich laten horen. Ik schreef ook wat stukjes en mocht er in de Tweede Kamer over komen vertellen (en toen kwamen er zoveel mensen dat er vier overflowzalen nodig waren!

18. The July Galileo Outage: What happened and why

Source: Bert Hubert's writings | Published: Thu, 07 Nov 2019 09:48:53 +0100

Link: <https://berthub.eu/articles/posts/galileo-accident/>

By bert hubert / bert@hubertnet.nl This post is an excerpt of a far longer post on Galileo, its structures and the cause of the outage. Here we'll only focus on the outage - the potential underlying reasons behind it are described in the full article. Since the week-long outage in July I've been fascinated by Galileo and, together with a wonderful crew of developers, experts and receiver operators, have learned so much about what I now know are called 'Global Navigation Satellite Systems' or GNSS.

19. The State of Galileo as seen by an outsider

Source: Bert Hubert's writings | Published: Thu, 07 Nov 2019 09:47:53 +0100

Link: <https://berthub.eu/articles/posts/state-of-galileo-and-accident/>

By bert hubert / bert@hubertnet.nl In this post I want to document some mostly non-technical aspects of the EU's Galileo Satellite Navigation Network. I will also share some observations on how things are going, and perhaps how they could be improved. NOTE: A shorter version of this article, focusing only on the July outage, can be found here. Since the week-long outage in July I've been fascinated by Galileo and, together with a wonderful crew of developers, experts and receiver operators, have learned so much about what I now know are called 'Global Navigation Satellite Systems' or GNSS.
