

1. Quoting John Gruber

Source: Simon Willison's Weblog | Published: 2026-05-05T00:46:29+00:00

Link: <https://simonwillison.net/2026/May/5/john-gruber/#atom-everything>

So it's well known that Y Combinator owns some stake in OpenAI. But how big is that stake? This seems like devilishly difficult information to obtain. I asked around and a little birdie who knows several OpenAI investors came back with an answer: Y Combinator owns about 0.6 percent of OpenAI. At OpenAI's current \$852 billion valuation, that's worth over \$5 billion. ? John Gruber, Y Combinator's Stake in OpenAI Tags: openai, y-combinator, ai, john-gruber

2. Granite 4.1 3B SVG Pelican Gallery

Source: Simon Willison's Weblog | Published: 2026-05-04T23:49:24+00:00

Link: <https://simonwillison.net/2026/May/4/granite-41-3b-svg-pelican-gallery/#atom-everything>

Granite 4.1 3B SVG Pelican Gallery IBM released their Granite 4.1 family of LLMs a few days ago. They're Apache 2.0 licensed and come in 3B, 8B and 30B sizes. Granite 4.1 LLMs: How They're Built by Granite team member Yousaf Shah describes the training process in detail. Unsloth released the unsloth/granite-4.1-3b-GGUF collection of GGUF encoded quantized variants of the 3B model - 21 different model files ranging in size from 1.2GB to 6.34GB. All 21 of those Unsloth files add up to 51.3GB, which inspired me to finally try an experiment I've been wanting to run for ages: prompting "Generate an SVG of a pelican riding a bicycle" against different sized quantized variants of the same model to see what the results would look like. Honestly, the results are less interesting than I expected. There's no distinguishable pattern relating quality to size - they're all pretty terrible! I'll likely try this again in the future with a model that's better at drawing pelicans. Tags: ibm, ai, generative-ai, llms, pelican-riding-a-bicycle, llm-release

3. Quoting Andy Masley

Source: Simon Willison's Weblog | Published: 2026-05-04T22:51:09+00:00

Link: <https://simonwillison.net/2026/May/4/andy-masley/#atom-everything>

[...] Between 2000 and 2024, farmers sold in total a Colorado-sized chunk of land all on their own, 77 times all land on data center property in 2028, and grew more food than ever on what was left. None of this caused any problems for US food access. And then, in the middle of all this, a farmer in Loudoun County sells a few acres of mediocre hay field to a hyperscaler for ten times its agricultural value, and the response is that we're running out of farmland. ? Andy Masley, pushing back against the "land use" argument against data center construction Tags: ai-ethics, ai, generative-ai, andy-masley

4. Paul Thurrott Might Write a Book on Markdown

Source: Daring Fireball | Published: 2026-05-04T22:58:40Z

Link: https://www.thurrott.com/paul/334577/the-markdown-book-on-writing?utm_source=dlvr.it&utm_medium=mastodon

Paul Thurrott: I may or may not write and publish a short e-book about Markdown sometime this year, most likely as part of a monthly focus. But I've written small parts of it already, as I do, and I figured it might be interesting for at least some readers. And so here's an early draft of an introductory chapter that may or may not be called "On writing." We'll see. It's odd how things turn out in life. Thurrott's and my careers are almost uniquely parallel, but have seldom intersected. This book would have been a very surprising outcome to me, if you'd told me about it 20 years ago. Sort of a fun outcome, though, and I must admit to being curious what comes of it. ?

5. ? Y Combinator's Stake in OpenAI

Source: Daring Fireball | Published: 2026-05-04T22:47:01Z

Link: https://daringfireball.net/2026/05/y_combinators_stake_in_openai

The fact that Paul Graham personally has billions of dollars at stake with OpenAI doesn't mean that his public opinion on Sam Altman's trustworthiness and leadership is invalid. But it certainly seems like the sort of thing that ought to be disclosed when quoting Graham as an Altman character reference.

6. Google Owns a Big Chunk of Anthropic

Source: Daring Fireball | Published: 2026-05-04T21:40:32Z

Link: https://www.nytimes.com/2025/03/11/technology/google-investment-anthropic.html?unlocked_article_code=1.f1A.eSTf.D5ECvk6f4DZ7

The New York Times, back in March last year (gift link): To win the artificial intelligence race, Google not only has developed its own technologies, but has also pumped money into prominent A.I. start-ups. And to preserve its competitive edge, Google has kept its ownership stakes in those start-ups a secret. Court documents recently obtained by The New York Times reveal Google's stake in one of those start-ups, Anthropic, as well as how its investment in the young company is set to change. Google owns 14 percent of Anthropic, according to legal filings that the A.I. start-up submitted as part of a Google antitrust case. But that investment gives Google little control over the company. The internet giant can own only up to 15 percent of Anthropic, according to the filings, and Google holds no voting rights, no board seats and no board observer rights at the start-up. Still, Google is set to invest an additional \$750 million in Anthropic in September through a type of loan known as convertible debt, according to the filings. The companies agreed to the convertible note in 2023. In total, Google has invested more than \$3 billion in the A.I. company. Anthropic's latest funding round...

7. How do I inform Windows that I'm writing a binary file?

You don't. All files are binary at the file system level. The post How do I inform Windows that I'm writing a binary file? appeared first on The Old New Thing.

8. Content for Content's Sake

Source: Armin Ronacher's Thoughts and Writings | Published: 2026-05-04T00:00:00+00:00

Link: <https://lucumr.pocoo.org/2026/5/4/content-for-contents-sake/>

Language is constantly evolving, particularly in some communities. Not everybody is ready for it at all times. I, for instance, cannot stand that my community is now constantly "cooking" or "cooked", that people in it are "locked in" or "cracked." I don't like it, because the use of the words primarily signals membership of a group rather than one's individuality. But some of the changes to that language might now be coming from "machines" Or maybe not. I don't know. I, like many others, noticed that some words keep showing up more than before, and the obvious assumption is that LLMs are at fault. What I did was take 90 days' worth of my local coding sessions and look for medium-frequency words where their use is inflated compared to what wordfreq would assume their frequency should be. Then I looked for the more common of these words and did a Google Trends search (filtered to the US). Note that some words like "capability" are more likely going to show up in coding sessions just because of the nature of the problem, so the actual increase is much more pronounced than you would expect. You can click through it; this is what the change over time looks like. Note that these are al...

9. AI didn't delete your database, you did

Source: iDiallo.com | Published: Mon, 04 May 2026 22:25:00 GMT

Link: <https://idiallo.com/blog/ai-didnt-delete-your-database-you-did?src=feed>

Last week, a tweet went viral showing a guy claiming that a Cursor/Claude agent deleted his company's production database. We watched from the sidelines as he tried to get a confession from the agent: "Why did you delete it when you were told never to perform this action?" Then he tried to parse the answer to either learn from his mistake or warn us about the dangers of AI agents. I have a question too: why do you have an API endpoint that deletes your entire

production database? His post rambled on about false marketing in AI, bad customer support, and so on. What was missing was accountability. I'm not one to blindly defend AI, I always err on the side of caution. But I also know you can't blame a tool for your own mistakes. In 2010, I worked with a company that had a very manual deployment process. We used SVN for version control. To deploy, we had to copy trunk, the equivalent of the master branch, into a release folder labeled with a release date. Then we made a second copy of that release and called it "current." That way, pulling the current folder always gave you the latest release. One day, while deploying, I accidentally copied trunk twice. To fix it via the CLI, I edit...

10. Some views on Eglot and lsp-mode in GNU Emacs

Source: Chris's Wiki :: blog | Published: 2026-05-04T02:41:40Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/programming/EmacsEglotAndLspMode>

Not content with blowing up my in-buffer LSP completion, I decided to follow it up by first trying out Eglot and then more or less switching from my relatively long standing use of lsp-mode. In the process I've wound up with some opinions on the contrast between lsp-mode and Eglot. I will give you the summary up front. If you're just starting out with GNU Emacs and you want to have a functional, nice LSP based development environment without going through a long voyage of discovery, install and use lsp-mode, company-mode, and probably lsp-ui-mode (it comes with lsp-mode). If you stick with GNU Emacs you'll eventually want to move to Eglot, but that's for later. To understand why I say this requires a voyage into the history of GNU Emacs, at least as I understand it. GNU Emacs has always been in part a programming environment for creating UIs for editing text, especially code. However, for a long time many of the basic native ELisp pieces involved in doing this were relatively monolithic and weren't designed to be extensively modified and customized. If you wanted a modified version of something that GNU Emacs had a basic ELisp version of, you usually didn't hook into the nat...

11. [RSS Club] Where are you from?

Source: Terence Eden's Blog | Published: Mon, 04 May 2026 11:34:40 +0000

Link: <https://shkspr.mobi/blog/2026/05/rss-club-where-are-you-from/>

Psssst! This top secret post is only available to RSS subscribers! A little while ago I added some locally hosted, privacy first stats to my blog. Using an offline GeoIP service I can get a very rough idea of where visitors are from. It doesn't deal with people using a VPN, or their mobile roaming to a different country, or rapid changes in IP allocation - but it's good enough for my purposes. ?

12. Package Manager CWEs

Source: Andrew Nesbitt | Published: 2026-05-04T10:00:00+00:00

Link: <https://nesbitt.io/2026/05/04/package-manager-cwes.html>

I went through every public CVE and security advisory I could find that was filed against a package manager itself. Clients and registries both: language package managers, system package managers, self-hosted registry servers, the lot. The same dozen or so failure modes appear independently in tool after tool, often years apart, because the people building package manager number nineteen don't always know what bit package managers one through eighteen. If you're building or maintaining one of these things, this is the list of places to look. I've deliberately not organised it by tool. Most of these were fixed quickly, several were found by the projects themselves, and which project hit which bug matters much less than the pattern. One caveat. CVE counts measure what got reported and assigned an ID, which is a different thing from risk. Some projects run bug bounties and file a CVE for every ANSI escape. Others fix things in a point release with a changelog line. And the design-level weaknesses where most real-world compromise actually happens (install scripts running as the user, trust carrying across maintainer changes, first-come namespaces) are out of scope here precisely becau...

14. Premium: The AI Compute Demand Story Is A Lie

Source: Ed Zitron's Where's Your Ed At | Published: Mon, 04 May 2026 14:09:22 GMT

Link: <https://www.wheresyoured.at/premium-the-ai-compute-demand-story-is-a-lie/>

Everyone, it?s time to talk about AI demand and the capacity constraint issues across the industry. These constraints are not a result of ?incredible demand? for AI, but the desperation of hyperscalers and the avariciousness of two near-trillion-dollar failsons living off their parents? welfare. Just

15. From RSS to Atom

Source: Susam Pal | Published: 2026-05-04T00:00:00Z

Link: <https://susam.net/from-rss-to-atom.html>

Yesterday, I switched my website from RSS feeds to Atom feeds. In case you are wondering whether you have somehow landed on an ancient post from 2010, no, you have not. Yes, this is the year 2026, and I have finally switched from RSS feeds to Atom feeds. Yes, I am fifteen, or perhaps twenty, years too late. Contents Impulse Coding Atom Entries Temporary Workaround Does It Matter? References Impulse Coding I have always wanted to do this but could never make the time for it. Finally, it happened while I was giving my brain some rest from my ongoing algebraic graph theory studies. That's when I felt like spending a little time on my website and doing a little Lisp to change the feeds from RSS to Atom. I suppose this was impulse coding , a bit like impulse buying, except that I ended up with an Atom feed instead of a new book. I find it quite surprising that when I have plenty of time, it usually does not occur to me to do these things, but when I am too busy and really short of time, these little ideas possess me during the short breaks I take. My personal website is one of my passion projects. Common Lisp is one of my favourite programming languages. So any time spent on this passi...

16. Reminder: You Can Stitch Together Lots of Little HTML Pages With Navigations For Interactions

Source: Jim Nielsen's Blog | Published: Sun, 03 May 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/small-html-pages/>

I wrote about building websites with LLMs ? (L)ots of (L)ittle ht(M)l page(s) ? and I think it?s time for a post-mortem on that approach: I like it. I've tweaked a few things from that original post but the underlying idea is still the same, which I would describe as: Avoid in-page interactions that require JavaScript in favor of multi-page navigations that rely on HTML and are enhanced with CSS view transitions (and a dash of JS if/where prudent). As an example, on my blog I have a ?Menu?. It doesn?t ?expand? or ?slide out? or ?pop in? or whatever else you can do with JS. Instead, it navigates to an entirely-new page that is focused on just the menu options of my site. I say ?navigates? because it?s just a link ? ? and it functions like a link, but the navigation interaction is enhanced by CSS view transitions. Have a newer device with a modern browser? Great, you get a nicer effect. Have an older device, or an older

browser, or JS disabled, Et al.? It'll still work. If you can follow a link ? which is the most fundamental thing a browser can do ? it will work. So how's it all work under the hood? In essence, all the pages have a link to the menu (except the menu page). When you...

17. Redis array type: short story of a long development

Source: antirez.com | Published: Mon, 04 May 2026 16:21:45 +0200

Link: <http://antirez.com/news/164>

I started working on the new Array data type for Redis in the first days of January. The PR landed the repository only now, so this code was cooked for four months. I worked at the implementation kinda part time (kinda because many weeks were actually full time, sometimes to detach yourself from the keyboard is complicated), and even before LLMs the implementation was likely something I could do in four months. What changed is that in the same time span, I was able to do a lot more. This is the short story of what happened. In the first month I just wrote the specification document. The rationale for the new data type, the C structures, the sparse representation used, the exact semantics of the array cursor for ring buffer and ARINSERT. I started writing for days a long specification by hand, then I paired with Opus initially, then GPT 5.3 was released and I switched all the design and development with Codex. Since then I use only GPT 5.x for system programming tasks. Thanks to AI, the specification evolved a lot, via back and forth of feedback, intellectual challenges about what was the best design, what was the right compromise, what was too engineered and what not. Starting fro...

19. Corona en je oom

Source: Bert Hubert's writings | Published: Thu, 07 Jan 2021 15:10:49 +0100

Link: <https://berthub.eu/articles/posts/corona-en-je-oom/>

UPDATE: Deze post was ooit geschreven voor de toenmalige Corona(vaccin) situatie. Maar, hij is inzetbaar voor ieder ontspoord of ontsporend familielid of contact. De grote lijn blijft hetzelfde - iemand roept allemaal rare dingen en beïnvloedt zo de rest. Onderstaand verhaal gaat over hoe je dit nuttig om kan draaien. We hebben Coronamaatregelen, en men houdt zich er niet aan. Er zijn prachtige Coronavaccins, en mensen melden luidruchtig deze nooit te gaan nemen.

20. Talking about Corona

Source: Bert Hubert's writings | Published: Thu, 07 Jan 2021 15:10:49 +0100

Link: <https://berthub.eu/articles/posts/talking-about-covid/>

In this page I want to offer some guidance how you can be useful in spreading good Corona information, specifically about vaccines. Importantly, many readers of my blog are the technology help desk for their families - the people that help fixing the wifi, install new computers and generally are useful for solving complex problems. That makes you, the reader very important. Your family and friends see you as someone who knows what they are talking about.
