

1. HTML table extractor

Source: Simon Willison's Weblog | Published: 2026-06-29T23:38:21+00:00

Link: <https://simonwillison.net/2026/Jun/29/html-table-extractor/#atom-everything>

Tool: HTML table extractor Yet another in my growing collection of paste-conversion tools. This one accepts pasted rich text from browsers (with embedded HTML tables) and converts every detected table into HTML, Markdown, CSV, TSV, or JSON. Try it out by selecting everything on the Wikipedia List of cities and towns in the San Francisco Bay Area page and pasting it directly into the tool: On a similar note, I recently rebuilt my Rich text to markdown tool to add support for tables and generally improve the UI. Tiniest TIL, using AppleScript to count the number of open browser tabs in Safari: `osascript -e 'tell application "Safari" to count tabs of every window'` Tags: safari , til , applescript

3. Ornith-1.0: Self-Scaffolding LLMs for Agentic Coding

Source: Simon Willison's Weblog | Published: 2026-06-29T16:17:59+00:00

Link: <https://simonwillison.net/2026/Jun/29/ornith/#atom-everything>

Ornith-1.0: Self-Scaffolding LLMs for Agentic Coding This is an interesting new open weights (MIT licensed) model, the first model release from DeepReinforce. [...] with variants including 9B Dense, 31B Dense, 35B MoE, and 397B MoE. Built on top of pretrained Gemma 4 and Qwen 3.5, it achieves state-of-the-art performance among open-source models of comparable size on coding benchmarks. As far as I can tell the licenses of those underlying models is compatible with being used in this way - Gemma 4 is Apache 2.0 licensed (and not bound by the janky additional Gemma Terms of Use that afflicted the previous Gemma models) and Qwen 3.5 is Apache 2.0 licensed as well. I've been running the model using LM Studio and the `ornith-1.0-35b-Q4_K_M.gguf` (20GB) GGUF, hooked up to Pi . Initial impressions are very good - it seems to be able to run the agent harness over many tool calls in a proficient way. Here's a terminal session where I asked it to "find the code that decodes the actor cookie" and then "find the code that opens the insert dialog when thebutton is clicked" against a Datasette checkout, which it handled with ease. I also had it draw this pelican , which came out at 103 tokens/sec...

4. I turned my prologue into a short video

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Mon, 29 Jun 2026 02:12:56 GMT

Link: <https://idiallo.com/byte-size/my-prologue-to-short-video>

It's hard to write a whole book. So for now at least, I've turned the prologue of my book into a short video. I hope you enjoy it.

5. Data Breach at Indian Supplier Tata Electronics Exposes iPhone 18 Pro Details and Photos

Source: Daring Fireball | Published: 2026-06-30T00:59:08Z

Link: <https://www.reuters.com/business/media-telecom/apple-iphone-18-pro-supplier-list-parts-photos-exposed-tata-data-leak-2026-06-29/>

Munsif Vengattil, Aditya Kalra, and Stephen Nellis, reporting for Reuters: Sensitive lists of components and suppliers, and photos of Apple's upcoming iPhone 18 Pro models are part of files posted on the dark web by the ransomware group that stole data from the U.S. firm's Indian supplier Tata Electronics, according to documents and a source. The exposure threatens the carefully negotiated business of building the iPhone, which Apple assembles from a thicket of suppliers worldwide. It could also upset Apple and its relationship with Tata given most of

the supplier arrangements are fiercely protected by Apple, and could also hand rivals, counterfeiters and its own vendors a view of who makes what. [...] Apple considers this detail sensitive and is concerned about the documents being shared on the dark web as they relate to unreleased models, according to the person familiar with the matter. The data maps suppliers to iPhone parts, which Apple does not disclose in its public database of suppliers, the person added. In all, the documents detail hundreds of parts to be on the upcoming iPhone 18 Pro models. The records also show where Apple draws a part from several suppliers and wh...

6. [Sponsor] Day One Journal

Source: Daring Fireball | Published: 2026-06-29T23:17:38Z

Link: <https://dayoneapp.com/blog/introducing-daily-chat/>

Day One recognizes that many people struggle with journaling not because they can't write, but because they don't know how to begin or what a 'good' journal entry about their day looks like. That's why we built Daily Chat, a guided reflection experience that helps you talk through your day, organize your thoughts, and shape them into a journal entry. Early testers commented: 'Day One's new Daily Chat is a true game changer for my daily journaling. The AI-powered chat makes capturing thoughts effortless and inspires creativity like never before. Writing my diary has never been this intuitive and fun!' Try it for yourself, it will change the way you think about journaling. '

7. The New York Times: 'Om Malik, Whose Blog Shaped How Silicon Valley Saw Itself, Dies at 59'

Source: Daring Fireball | Published: 2026-06-29T00:25:37Z

Link: https://www.nytimes.com/2026/06/26/technology/om-malik-dead.html?unlocked_article_code=1.t1A.AyPT.p7GhDrDcJSfa

Clay Risen, writing for The New York Times (gift link): Mr. Malik started his blog just as the dot-com bubble burst, leading to a recession that also took down many of the journalism start-ups that wrote about tech, like The Industry Standard and Inside.com. He was among the most prominent of the writers who quickly filled the gap, covering Silicon Valley with a mixture of hot scoops and sharp opinions that quickly made Gigaom a must-read. 'The Android OS leaves me feeling like one feels three hours after having Chinese food: a tad empty,' he wrote in a 2010 post that neatly summarized Google's struggles to move beyond its roots as a search platform. 'Google has to learn the art of engagement - something particularly challenging.' Lovely, warm, accurate and fair obituary. This pulled snippet is a great one. Early Android as Chinese takeout is such a deft analogy, and the piece really isn't about Android specifically but Google institutionally. Not speeds and feeds, but can they make products with a soul? With heart? Om's pessimism was obvious, and I'd say, prescient. He had a rare ability to see around corners, and to pick out from the horde of new companies the ones that were goi...

8. Derivative equals inverse

Source: John D. Cook | Published: Tue, 30 Jun 2026 01:06:12 +0000

Link: <https://www.johndcook.com/blog/2026/06/29/derivative-equals-inverse/>

Here's kind of a strange problem with an interesting solution: find a function f such that the derivative of f equals the inverse of f for all positive x . $f'(x) = f^{-1}(x)$ This is a differential equation, but a very unusual one, one that cannot be solved using any of the techniques taught in a class on differential equations. [?] The post Derivative equals inverse first appeared on John D. Cook .

9. Who you gonna believe: Grok or the docs?

The calculator utility bc has a minimal math library. For example, there's no tangent function because you're expected take the ratio of sine and cosine. (The Gnu version of bc does have a function for tangent, but the POSIX version does not.) And yet bc includes support for Bessel functions $J(x)$. The bc function j [?] The post Who you gonna believe: Grok or the docs? first

10. There's a plague of Googlebot impersonation going on (in June 2026)

Source: Chris's Wiki :: blog | Published: 2026-06-29T03:19:28Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/web/GooglebotImpersonatorPlague>

A while back I wrote about how claiming to be Googlebot is now a bad idea , where I noted that there were (reports of) malicious crawlers out there impersonating Googlebot and other legitimate big crawlers and at the same time, Google and other crawler operators published the IP address ranges their crawlers used. You could put these two together to block these impersonators: Anything claiming to be Googlebot that is not from a listed Google IP is extremely suspicious and in this day and age of increasing anti-crawler defenses, blocking all 'Googlebot' activity that isn't from one of their listed IP ranges is an obvious thing to do. After I wrote that entry, I quietly went and added support for blocking crawler impersonators to DWiki , the wiki-engine that powers Wandering Thoughts , and set it up for a few big crawlers with published IP address ranges. When I did this, I didn't expect to block very much, and for months that was indeed what happened; I'd get a few attempts once in a while. Then, this June, the floodgates opened. For weeks, I've been seeing hundreds of requests a day claiming to be Googlebot (on a few days, thousands of requests). The requests come from a variety o...

11. Unbundling the standard library

Source: Andrew Nesbitt | Published: 2026-06-29T10:00:00+00:00

Link: <https://nesbitt.io/2026/06/29/unbundling-the-standard-library.html>

I got sent a link to a pull request against Dan Burton 's composition , a tiny Haskell package whose whole gimmick is that it depends on nothing, not even base . The upcoming GHC 10.2 breaks it: built-in names resolve through a real module, GHC.Essentials , which is in base , so from 10.2 every package picks up an implicit base dependency whether the cabal file declares one or not. The PR added a flag to opt out of that. Dan closed it and shipped a 2.0 that depends on base like everything else, on the grounds that the zero-dependency claim had always been a polite fiction about where the compiler's wired-in identifiers came from. The zero-dependency claim was always a question of where the line falls between the compiler and its standard library, and in GHC 10.2 that line moved by one module. That sent me off cataloguing the same boundary in other ecosystems, but the part I didn't expect was how much the answer changes what a vulnerability advisory looks like. Advisory format The clearest case I found is Ruby Bug #20516 : Ruby 3.3.2 shipped weeks after the fix for CVE-2024-35176 still bundling the vulnerable rexml 3.2.6, because the fix had gone out as a gem release and the copy i...

12. Notes from Bryan Cantrill's 'Intelligence is not Enough'

Source: Jim Nielsen's Blog | Published: Sun, 28 Jun 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/intelligence-isnt-enough/>

I quite enjoyed this talk from Bryan Cantrill where he discusses the difficult engineering problems they overcame while working on their company Oxide . Some of the problems they ran into were bugs. But these weren't any ordinary bugs, they were company-destroying bugs: bugs that, if they couldn't be fixed, would sink the entire company. And the difficulty in solving these bugs was that they had no precedent. Any documentation or knowledge they could find around the symptoms of the problem was actively incorrect. In fact, Bryan says that the team's breakthroughs on these bugs were solutions that an artificial super intelligence would've never suggested because they ran against all known and available reasoning, documentation, and knowledge. His point being: intelligence isn't everything. Human values are still incredibly important. Intelligence alone does not solve problems like [the ones we encountered]. Our ability to solve these problems had nothing to do with our collective intelligence as a team. We've got a terrific team, but it's a lot more than just intelligence. And in particular for these [kinds of] problems, and many like them, we had to summon the elements of our chara...
