1. How We Took Over ChatGPT Accounts
Source: Simon Willison’s Weblog | Published: 2026-10-31T23:15:22+00:00
Link: https://simonwillison.net/2026/Oct/31/how-we-took-over-chatgpt-accounts/
How We Took Over ChatGPT Accounts Parameter Labs describe an exploit they found against ChatGPT’s implementation of the artifacts pattern (OpenAI used to call this "Canvas" but it looks like the latest revision is called HTML previews ), where interactive custom HTML apps are displayed in a sandboxed iframe. It’s important that HTML in these stays tightly sandboxed to avoid untrusted code interacting with OpenAI APIs and accessing private data. Parameter found quite a complex attack chain. OpenAI use the MathLive JavaScript library as part of their graph support, and that library includes its own virtual keyboard , which can be triggered in the parent page via postMessage() from the sandboxed iframe. That message receiving code uses innerHTML , so anything that sends a message can add custom HTML to the parent - and there was no mechanism to prevent other sandboxed frames, including HTML preview frames, from calling that method. This meant untrusted code in an iframe could insert HTML, and while innerHTML doesn’t directly execute script elements it could be used to inject a new iframe without sandbox restrictions. OpenAI?s CSP rules blocked inline scripts entirely, and only allowe...

2. datasette-llm 0.1a9
Source: Simon Willison’s Weblog | Published: 2026-10-31T22:10:01+00:00
Link: https://simonwillison.net/2026/Oct/31/datasette-llm/
Release: datasette-llm 0.1a9 I have some big upgrades to Datasette Agent in the pipeline, but in the meantime here’s a tiny user experience improvement to the underlying datasette-llm plugin. It now picks up the default model used by LLM , which means you can start using Datasette Agent without needing to explicitly configure a default model: uvx --with datasette-agent datasette content.db --internal internal.db Previously you would also need to specify a model with -s plugins.datasette-agent.default_model gpt-6-astra . Tags: datasette , llm , datasette-agent

3. GM to Pay $220 Million After Betraying Their Own Drivers? Privacy
Source: Daring Fireball | Published: 2026-10-30T17:18:56Z
Link: https://www.reuters.com/business/autos-transportation/gm-pay-220-million-settle-allegatio ns-it-violated-consumers-privacy-2026-10-29/
Jonathan Stempel, reporting for Reuters: General Motors will pay $220 million to settle ?allegations that it illegally sold drivers? private behavior and location data to brokers, who then sold the information to insurers that used it to set and sometimes increase rates. The settlement, announced on Thursday, resolves claims by the attorneys general of 35 US states and the District ?of Columbia over the automaker?s Smart Driver program, which enrolled millions of drivers ?between 2016 and its discontinuation in 2024. Other regulators have also reviewed GM?s handling of driver data. GM was accused of pitching Smart Driver to help ?people improve their personal driving safety, only to violate drivers? privacy by reneging on its ?promise not to sell their data without permission. Many people who signed up were also enrolled in GM?s OnStar safety, navigation and diagnostic service. Reuters?s milquetoast headline was ?GM to Pay $220 Million to Settle Allegations It Violated Drivers? Privacy?. They?re not mere allegations. They did it. They just betrayed their customers? privacy to make a few quick bucks. I?ve driven a few GM rentals in recent years, and I?d almost certainly never buy o...

4. Patrick Stewart Dies at 86
Source: Daring Fireball | Published: 2026-10-30T16:53:09Z
Link: https://www.hollywoodreporter.com/movies/movie-news/patrick-stewart-dead-star-trek-x-men-1236742932/
Aaron Couch, The Hollywood Reporter: Patrick Stewart, the sophisticated actor who brought a Shakespearean touch to Star Trek and X-Men as he made an otherworldly transformation from

British stage veteran to sci-fi icon, has died. He was 86. Stewart died Wednesday at his home in Los Angeles following ?a brief and poignant journey with Alzheimer?s disease and Lewy body dementia,? longtime spokesperson Kelly Bush Novak announced. There?s an old adage that everyone?s favorite SNL cast is the one from their teenage years. It?s probably true for Star Trek too. My favorite is The Next Generation and it?s not even close. Stewart?s Jean-Luc Picard was just so fucking cool. Smart, wise, firm, curious, empathetic, and just fucking cool. Those same adjectives seemingly all apply to Stewart himself. See Kottke for a bunch more links . ?

5. The Space Shuttle Discovery?s Starboard Side ?s? Is Upside Down

How Jason Snell beat me to linking to this, I don?t know. But like I said back in February , when it comes to signage, ?Mind your P?s and Q?s? ought to be ?Mind your H?s and S?s?. ?

6. Fast and slow ways to improve your reputation

Link: https://seangoedecke.com/how-to-get-assigned-interesting-work/
To get a good reputation in tech companies, you need to work on important projects. However, you need a good reputation first in order to get assigned important projects. Doesn?t that make it impossible to get started? I get a lot of emails from engineers who are struggling with this problem. They go like this: I work with a strong senior engineer. I feel like my manager structures work so that strong engineer always gets the visible work, and the more they do, the more opportunities they get, while I sit on the sidelines. My manager agrees with me that it?s time for me to start leading work myself, but every time a new project appears it always goes to the strong engineer. What do I do? This is a good case study for what I think of as ?tech company theory of mind?: understanding the actual incentives that motivate decisions in tech companies, instead of the formal process. According to the formal process, projects should probably be assigned round-robin to whoever has capacity and isn?t currently working on one. But (as my emails complain) this is almost never how it works in practice. A vicious cycle Managers care about giving their employees chances to build a reputation, but t...

7. Notes from October 2026
Source: Evan Hahn (dot com) | Published: Sat, 31 Oct 2026 06:00:00 +0000
Link: https://evanhahn.com/notes-from-october-2026/
Happy Halloween! Here?s a little of what I got up to in this spooky month. Things I did in October I moved this site from an Apache-powered VPS to CDN-frontend object storage. This means I pay less money, I do less maintenance, and my site loads faster in most parts of the world. Hopefully nobody noticed this change, except that things should be a little snappier! (Also, my old site had a small amount of PHP, which I?m happy to have removed given PHP?s remote code execution vulnerabilities this month.) In an effort to fill in the gaps of the internet , I published a short list of Vim forks . At Ghost, my team shipped two additions to our automations feature: analytics and more granular triggers . Both of these should help our independent publishers grow. More automations stuff on the way! Like every month, I wrote a few articles at Zelda Dungeon , including a debate over, perhaps, the most trivial disagreement possible . Tech links I clicked on The surveillance state takes another step: pinpointing addresses based on interior photos . Thanks, AI! ?How Technology Empowers?and Imperils?Dictators? is a reminder that technologists have a social duty. Two lists of tech fascists: ?Fashw...

8. Gig Review: The Witcher in Concert ?????
Source: Terence Eden?s Blog | Published: Sat, 31 Oct 2026 12:34:18 +0000

The most common way people experience classical style music these days is via movies and video-games. After seeing The Force Awakens - live in concert, I’ve become rather a fan of

watching movies performed with a live soundtrack. But what about watching a video game with orchestral accompaniment? We travelled up to Wolverhampton to see "The Witcher": A one-of-a-kind live event that transforms?

10. This Week in Package Management: 31 October 2026
Source: Andrew Nesbitt | Published: 2026-10-31T10:00:00+00:00
Link: https://nesbitt.io/2026/10/31/this-week-in-package-management.html
This week?s package management news, gathered from the package manager OPML feed collection , my posts and boosts on Mastodon , and anything people sent me. Security The Go blog?s eMudhra post-incident writeup covers Go?s first URGENT-track security release: Mozilla added eight eMudhra intermediates to OneCRL on 17 October, the Go security team was alerted on 19 October, and Go 1.27.3 and 1.26.10 shipped under seven and a half hours later with a patch that rejects any chain through those intermediates. The post also says Go plans to add revocation checking on Linux. A test page shows the git, curl and python3 that Apple ships with macOS still trusted the eMudhra intermediates on 28 October, and macOS 27.2 undid the workaround users had applied by hand. sbt 1.13.1 and 2.0.12 fix a zip slip in IO.unzip and its variants ( GHSA-p8jf-532w-4p65 ) that an earlier fix missed. pipx 1.18.7 now requires pip 26.2.2 or later in its shared libraries and replaces an older shared pip on the next pipx command instead of waiting for the 30-day refresh. Releases Composer 2.11 adds a cooldown dependency policy that withholds newly published versions for a configured period during update and require ,...
