3. Ilm-anthropic 0.29

Release: llm-anthropic 0.29 Adds support for Claude Opus 5.5 : llm -m claude-opus-5.5 "prompt goes here" Tags: llm , anthropic

Link: <https://dynamight.net/liver/>

[Epistemic Status: Speculative unifying theory of biology.] I don't know about you, but I greatly resent having to be a biological organism and subject to all the poor engineering and design decisions that entails. This has many manifestations. A recent one is often wondering, why is the entire body such garbage except for the liver? Take the kidneys. Once you reach adulthood, they start to slowly decay. You can damage them through not-obviously-dangerous stuff like taking too much vitamin D or taking ibuprofen while dehydrated . Significant damage typically leads to scarring and a permanent reduction in function. Or take the gums. If you brush too hard or don't floss enough, they may retreat down your teeth, never to return. Most of the body is like that. But the liver. My friends, the liver! If it's injured, it will usually heal without scars. As you age, it typically maintains near full strength. You can give half of your liver to someone else and it will regrow to full size and function in a few months. I'd like to find whoever designed the liver and have them make me a full body. Except here's a theory: It's good that most of the body is fragile crap. It would be better if s...

IUz1NiJ9.eyJpZCI6IkFIVU9GbXpuZFUlLCJwIjoiL2NvbHVtbi85OTk5OTkvb3B0aW1pemVYLW1ldGEtbXVzZS1haS1jdXRllwiZWhwIjoxNzkwNzAxNDAwLCJpYXQiOiJES3OTAYnJk0MDB9.chaHCz3wgil4jn9EzA11I7fHhQkEmn17aCiXtOBPEU

Victoria Song, in her Optimizer column/newsletter for The Verge: I've been aggressively avoiding Muse since it launched a few weeks ago. Sure, some of that is because I was busy testing other devices. But the number-one reason why is that I am horribly vulnerable when faced with extreme cuteness. Alas, at Meta Connect, I couldn't escape this pink-cheeked fella

with his plush ivory fur, and so I finally downloaded the app once I returned to my hotel room. He was plastered on every screen during the keynote. My eye twitched with maximum cute aggression when Meta CTO Andrew Bosworth showed us his Muse agent Cooper. The duderino was dressed in a lil pilot outfit because he's Boz's test pilot. My face scrunched with rage when Cooper picked up his pudgy round arms to wave. It's the cutest thing I've ever seen at a tech keynote. The tiny demon in my head thought to itself, ?I WANT TO SQUISH ITS LITTLE FACE.? [...] Most people I know would say that Meta stuffing an AI agent into everything and anything feels sinister. Now look at Jolly's little smile. Tell me it doesn't make the corners of your mouth twitch slightly upward. If you honestly say no, you're stronger than I am. What attracted...

7. Joanna Stern Interviews Mark Zuckerberg

Source: Daring Fireball | Published: 2026-09-24T20:53:03Z

Link: <https://thenewthings.com/p/exclusive-mark-zuckerberg-interview>

Great interview from Stern, as usual, seemingly conducted on the old set of Three's Company . She opened by asking if AI is going to wipe out humanity, and I think Zuck whiffed by not simply laughing and saying no. She also directly asked his thoughts on people calling Meta Glasses ?pervert glasses?. Regarding the shift from ?the metaverse? to AI, Zuckerberg likened it to Apple having started work on touchscreen tablets and then pivoting to turn the technology into the iPhone first. His point being that it's not that iPads weren't a big successful idea, but they're not as big as phones. There are four big players in consumer AI: Google, Meta, OpenAI, and Anthropic. I don't think Zuckerberg mentioned any of the others by name ? neither in his Meta Connect keynote , nor in this interview with Stern. But much of what he unveiled and explained, in both, makes the case for Meta as the leader in this space. Compared to Google, Meta is highly focused and Google is seemingly utterly unfocused . Focus matters when you're trying to ship something new while exploring uncharted territory. Compared to OpenAI and Anthropic, Meta has consumer-product chops. If there's no moat around the AI model...

8. Meta Connect Keynote 2026

Source: Daring Fireball | Published: 2026-09-24T20:30:01Z

Link: <https://www.youtube.com/watch?v=SdKFDIAGF24>

Meta's annual keynote yesterday was a tight 55-minute live event held on their campus in Menlo Park. I watched the whole thing this morning, before recording tomorrow's episode of Dithering . (Which you should subscribe to.) It was a good keynote. Consumer products announced: Third-generation Meta Glasses with cameras. A new glasses product: Ray-Ban Meta Audio . These are audio-only smart glasses, with microphones and speakers, but no camera. Zuckerberg pitched them as being less expensive, having longer battery life, and looking much more like regular glasses. All of those things are true, but he deftly avoided the privacy backlash against glasses with cameras. They're not that much less expensive than the camera models, starting at \$350. Meta VR Glasses . Slogan: ?The weight is over.? Some similarities to Vision Pro: use cases include immersive movies and sports, virtual displays for computing, and gaming; the computer is a thick phone-sized puck connected to the glasses via a cable. Some significant differences from Vision Pro: Meta VR Glasses only weigh 100g; Vision Pro weighs 750-800g. It's almost an order of magnitude difference by weight. Also: these are only going to cost...

9. Some thoughts on HTML's proposed previewsrc attribute

Source: Terence Eden's Blog | Published: Thu, 24 Sep 2026 11:34:54 +0000

Link: <https://shkspr.mobi/blog/2026/09/some-thoughts-on-htmls-proposed-previewsrc-attribute/>

One of the great things about modern HTML is that it tries to standardise stuff that developers are already doing. If there are a myriad ways of, for example, loading video onto a page - then browsers and other interested parties should work out how to make a standard element. An interesting new proposal has been brought forth by Microsoft. There are a dozen ways to show a preview of an?

10. Package Manager Sandboxing

Source: Andrew Nesbitt | Published: 2026-09-24T09:00:00+00:00

Link: <https://nesbitt.io/2026/09/24/package-manager-sandboxing.html>

Homebrew 7.0.0 shipped on September 13th with ?stronger sandboxing? in the opening line of the release notes. Installation is being split into a fetch phase that has network access and writable caches, and an install phase that runs offline with read-only caches. Sandboxed builds are blocked from reading your home directory by default. Cask install hooks run confined, and a cask sandbox escape via LaunchServices was closed in the same release by denying app launching, Mach services, and Unix socket connections. Formula post_install and cask flight blocks, which are arbitrary Ruby today, are deprecated in favour of declarative *_steps delivered as signed data, with a removal deadline of December 2027. Homebrew, which I help maintain, has run macOS formula builds under sandbox-exec since 2015 . The last four months turned that from a build-hygiene measure into a stated security programme. 6.0.0 in June brought a Linux build sandbox based on Bubblewrap and made third-party taps require explicit trust before their Ruby is evaluated. By July the Bubblewrap implementation had been replaced with Landlock , which is built into the kernel and works inside unprivileged Docker, and by August...

11. Shrinking a Fedora virtual disk

Source: Entropic Thoughts | Published: Thu, 24 Sep 2026 00:00:00 +0200

Link: <https://entropicthoughts.com/shrinking-fedora-virtual-disk>

I have a weird setup for my laptop. In summary, I have been irrationally scared of running Fedora on bare, dual-GPU metal, so I run it in a virtual machine with Hyper-V on Windows as a hypervisor. The idea was to let Windows manage GPUs and power management stuff like hibernation, and then use Fedora as my main UI to the computer. This has worked surprisingly well, but that?s only because my expectations were low to begin with. The VM can barely access the hardware of the underlying machine: it can?t use the GPU, it can?t use the front-facing camera, Linux starts thrashing weirdly when the VM runs out of memory, among other quirks I?ve learned to work around. Thus, I?ve wanted to re-install on bare metal for a while, but! problem! Come on a journey with me. It?s got a hero with hubris, mistakes, tension, and a cliffhanger. (Continue reading the full article on the web.)

12. So yeah it was written using AI

Source: Bert Hubert's writings | Published: Thu, 24 Sep 2026 17:45:00 +0200

Link: <https://berthub.eu/articles/posts/so-yeah-it-is-written-using-ai/>

As of this week, I?m suddenly seeing people dismiss points made in otherwise readable articles because Pangram says these were (partially) AI authored. I hate the origins and consequences of GenAI more than almost anyone. I can?t wait for the bubble to burst also. I presented in Amsterdam on how AI has killed my professional field. AND YET. If you discover that an opinion piece was authored with or by GenAI, by all means feel free not to engage with it.
