

1. Raspberry Pi Connect may control Windows soon

Source: Jeff Geerling | Published: Wed, 29 Apr 2026 12:00:00 -0500

Link: <https://www.jeffgeerling.com/blog/2026/raspberry-pi-connect-may-control-windows-soon/>

Support for remote controlling Windows PCs may be added to Raspberry Pi Connect , Raspberry Pi's free remote access service. When they announced Pi Connect in 2024 , I speculated the service was launched in response to RealVNC's sluggish adoption of Wayland, leading to Pi users lacking a solid remote access solution after Pi OS 12 'Bookworm' was launched. The service was helpful for those who had one or more Raspberry Pis to access, but the Pi Connect daemon didn't run on Windows or macOS at the time, so a true competitor to RealVNC (at least for basic use cases) it was not.

2. The Zig project's rationale for their firm anti-AI contribution policy

Source: Simon Willison's Weblog | Published: 2026-04-30T01:24:23+00:00

Link: <https://simonwillison.net/2026/Apr/30/zig-anti-ai/#atom-everything>

Zig has one of the most stringent anti-LLM policies of any major open source project: No LLMs for issues. No LLMs for pull requests. No LLMs for comments on the bug tracker, including translation. English is encouraged, but not required. You are welcome to post in your native language and rely on others to have their own translation tools of choice to interpret your words. The most prominent project written in Zig may be the Bun JavaScript runtime, which was acquired by Anthropic in December 2025 and, unsurprisingly, makes heavy use of AI assistance. Bun operates its own fork of Zig, and recently achieved a 4x performance improvement on Bun compile after adding "parallel semantic analysis and multiple codegen units to the llvm backend". Here's that code . But @bunjavascript says : We do not currently plan to upstream this, as Zig has a strict ban on LLM-authored contributions. In Contributor Poker and Zig's AI Ban (via Lobste.rs) Zig Software Foundation VP of Community Loris Cro explains the rationale for this strict ban. It's the best articulation I've seen yet for a blanket ban on LLM-assisted contributions: In successful open source projects you eventually reach a point where...

3. llm 0.32a1

Source: Simon Willison's Weblog | Published: 2026-04-29T23:52:50+00:00

Link: <https://simonwillison.net/2026/Apr/29/llm-3/#atom-everything>

Release: llm 0.32a1 Fixed a bug in 0.32a0 where tool-calling conversations were not correctly reinflated from SQLite. #1426 Tags: llm

4. LLM 0.32a0 is a major backwards-compatible refactor

Source: Simon Willison's Weblog | Published: 2026-04-29T19:01:47+00:00

Link: <https://simonwillison.net/2026/Apr/29/llm/#atom-everything>

I just released LLM 0.32a0 , an alpha release of my LLM Python library and CLI tool for accessing LLMs, with some consequential changes that I've been working towards for quite a while. Previous versions of LLM modeled the world in terms of prompts and responses. Send the model a text prompt, get back a text response. `import llm model = llm . get_model ( "gpt-5.5" ) response = model . prompt ( "Capital of France?" ) print ( response . text () )` This made sense when I started working on the library back in April 2023. A lot has changed since then! LLM provides an abstraction over thousands of different models via its plugin system . The original abstraction - of text input that returns text output - was no longer able to represent everything I needed it to. Over time LLM itself has grown attachments to handle image, audio, and video input, then schemas for outputting structured JSON, then tools for executing tool calls. Meanwhile LLMs kept evolving, adding reasoning support and the ability to return images and all kinds of other interesting capabilities. LLM needs to evolve to better handle the diversity of input and output types that can be processed by today's frontier models. The...

5. Oakland's Airport Is Now Officially ?Oakland San Francisco Bay Airport?

Source: Daring Fireball | Published: 2026-04-29T21:24:06Z

Link: <https://sfstandard.com/2026/04/28/oak-sfo-reach-naming-settlement/>

Max Harrison-Caldwell, reporting for The San Francisco Standard: In 2024, the port ? which manages the Oakland airport ? changed the name from Oakland International Airport to San Francisco Bay Oakland International Airport, hoping to entice travelers by emphasizing the hub?s proximity to SF. At the time, the number of people flying into Oakland was declining after a brief post-pandemic rebound, and the airport was losing routes. The effort largely failed , while having the secondary impact of annoying San Francisco leaders, who swiftly sued, arguing that the name would confuse travelers. In 2025, the port swapped the two cities within the name to produce ?Oakland San Francisco Bay Airport.? San Francisco didn?t like that either, but the parties entered mediation in December and have now settled. The new name is fine, as long as ?Oakland? always appears before ?San Francisco? in all materials and the airport does not add the letters SF to its code, OAK. The Standard ran this under the cheeky headline ?Little-Known Bay Area City Will Keep San Francisco in Its Airport?s Name?, which is a little funny, but I don?t see the need to punch down like this. Nobody calls the city ?San Franc...

6. ?Elon Musk Appeared More Petty Than Prepared?

Source: Daring Fireball | Published: 2026-04-29T15:15:29Z

Link: https://www.theverge.com/ai-artificial-intelligence/920191/elon-musk-sam-altman-trial-day-one?view_token=eyJhbGciOiJIUzI1NiJ9.eyJpZCI6InBrV1FGdGtlcEEiLCJwIjoilL2FpLWYdGlmaWNpYWwtaW50ZWxsaWdlbmNILzkyMDE5MS9lbG9uLW11c2stc2FtLWFSdG1hbi10cmIhbnC1kYXktb25liiwiZXhwIjoxNzc3OTA1NDgxLCJpYXQioiE3Nzc0NzM0ODF9.FkMZ8-YRv8q3d7n6p8q_scJaERWtNumD9pK7kONpTE4

Elizabeth Lopatto, reporting on Musk v. Altman from the courtroom in Oakland (gift link): Today the first witness was sworn in in *Musk v. Altman: *Elon Musk. I was surprised by how flat he seemed. This is not the first time I?ve seen Musk in court. During his defamation suit, he turned on the charm and the jury responded by finding him not guilty. Today he looked adrift and unprepared. The only times he showed real animation were when he was bragging about how much he?d done for OpenAI . [...] What did Musk do at OpenAI? ?I came up with the idea, the name, recruited the key people, taught them everything I know, provided all the initial funding. Besides that, nothing.? He paused for laughter, and one or two people obligingly chuckled. But most of the courtroom was silent. I thought he sounded petulant. ?I could have started it as a for-profit and I chose not to,? Musk said. Elon Musk petty, petulant, smug, awkward, and unprepared? Where?s my fainting couch? At another point, Musk was asked to explain who former OpenAI board member Shivon Zilis was. ?Shivon was the, um, my chief of staff and, uh, you know,? Musk said. One person in the gallery ? presumably familiar with the fact t...

7. ?Sordid and Small?

Source: Daring Fireball | Published: 2026-04-29T15:03:21Z

Link: https://www.theatlantic.com/technology/2026/04/openai-trial-elon-musk-sam-altman/686984/?gift=iWa_iB9lkW4UuiWblbrWGYJmg9p-llxzEAgykQekDFA

Matteo Wong, covering Musk v. Altman for The Atlantic (gift link): Musk is asking that Altman be removed from OpenAI?s board, that the company convert back to a nonprofit, and for the return of allegedly ?ill-gotten gains? ? some \$150 billion ? which Musk says would go to OpenAI?s charitable trust. Outside legal experts say that Musk is unlikely to win all or even much of this. His argument is confusing: OpenAI has certainly evolved from a nonprofit lab to a revenue-chasing, consumer behemoth, and a chorus of critics has alleged that it has deviated from its original mission of ensuring that AGI benefits humanity. But Musk himself appears to have insisted that OpenAI couldn?t keep up as a nonprofit ? for instance, in early 2018, he wrote an email to OpenAI leadership saying that merging the firm with Tesla ?is the only path that could even hope to hold a candle to Google.? And even before he sued, Musk launched a rival for-profit company, xAI. ?Mr. Musk?s lawsuit is a pageant of hypocrisy,? William Savitt, a lawyer for OpenAI, told the jury today, later adding that Musk had ?sour grapes.? [...] The trial makes the AI boom seem sordid and small. In his sworn deposition , Altman wro...

8. Have You Seen the New Excel?

Source: iDiallo.com | Published: Wed, 29 Apr 2026 23:40:00 GMT

Link: <https://idiallo.com/blog/have-you-seen-the-new-xl-ai-parody?src=feed>

Stop coding. Stop hiring. Stop building. While the tech world obsesses over large language models and neural networks, I discovered the real disruptor that has been hiding in plain sight. Mine was originally installed on my desktop in 1992. And now, it's about to change everything in the world. We are talking about Microsoft Excel, of course. If you haven't looked at a spreadsheet lately, you are missing the most significant leap in enterprise capability since the invention of the corporation itself. We are entering an era of No-Code where the code was never needed in the first place. My own job as a software engineer is not safe, and I'm looking forward to the future. Developers from every walk of life are afraid, and for good reasons. You hear the complaints constantly: "How can I ensure the code works? I can't possibly review a PR with a thousand files. It's unmaintainable." This is a crisis of confidence in the software engineering sector. This specific anxiety has never existed in the Excel ecosystem. Code is called code for a reason, it is meant for the machine to read, not people. In Excel, we don't worry about "reviewing pull requests." We worry about results. The spreadsh...

9. If it's in JSON, it's not really a configuration file

Source: Chris's Wiki :: blog | Published: 2026-04-29T02:15:22Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/programming/JSONNotConfigurationFile>

Over on the Fediverse, I said something : If your idea of a good configuration file format is JSON, you are not a daemon I will ever run voluntarily. This is not very much of a subtoot of ISC Kea. If we ever have to replace the traditional ISC DHCP server with anything, it will not be with Kea. If your program's configuration file format is JSON, you're openly advertising that you care far more about programming convenience in reading and loading your configuration file than you do about the people operating your software. "You can generate our JSON with software from something else", yeah, no. You've told me what your priorities are and I'm going to believe you. I would rather run software that actually cares about the people running it. JSON is a perfectly good format for your internal configuration data store, what you transform a configuration file into and then save for your software's future convenience. It's not a configuration file format, and if you use it as such, you're basically forcing people to write your compiled configuration storage format themselves. The result is a configuration file only in a narrow technical sense that it is a file you force people to supply t...

10. Let's Get Digging!

Source: Terence Eden?s Blog | Published: Wed, 29 Apr 2026 11:34:23 +0000

Link: <https://shkspr.mobi/blog/2026/04/lets-get-digging/>

As part of my quest to try new things I decided to dig for treasure in my local park. The wonderful folks at DigVentures allow members of the public to assist with archaeology projects in their local area. We arrived on a sunny Thursday to find a couple of areas of Lesnes Abbey cordoned off, with the turf taken up, and a set of tools waiting for us. After a suitable health-and-safety briefing ?

11. 10Gb/s Ethernet: what I actually did to get it working in my home

Source: Giles' blog | Published: Wed, 29 Apr 2026 14:15:00 +0000

Link: <https://www.gilesthomas.com/2026/04/10g-ethernet-what-i-did>

Having learned enough about 10Gb/s Ethernet to be comfortable about setting it up in my house, it was time to bite the bullet: order it from the ISP, buy some kit, and get started. I already had 2.5Gb/s working. The apartment has structured cabling -- each room has one or more RJ45 sockets in the wall, and there's a patch panel downstairs by our front door that has a matching patch socket for each wall socket. So when we moved in, I simply set things up so that there was a 2.5Gb/s switch down by the patch panel, and wired everything together there. Most of our stuff works over WiFi, of course, but I needed a wired backbone to connect the excessive number of computers in my study both to each other, and to the outside world. What did I need to do? Simplifying a bit, I had this 2.5Gb/s setup: The ISP connection came into the apartment in the living room. It went through a router/firewall machine I'd set up myself (more on that later),

then via a 2.5Gb/s switch to the main WiFi AP and also to a wall socket. Down at the patch panel, I had a 2.5Gb/s switch, which was connected to the patch socket corresponding to the router's wall socket. Another connection from that switch went to the...

12. On wintering.

Source: Westenberg. | Published: Wed, 29 Apr 2026 01:54:43 GMT

Link: <https://www.joanwestenberg.com/on-wintering/>

The winterer is out of the loop; they're not maintaining a position because they don't have a position to maintain. They can do work that takes longer than a quarter, longer than a year, longer than 5 years, because nobody is auditing the line item.

13. Multiple URLs in Git Remote

Source: Susam Pal | Published: Wed, 29 Apr 2026 00:00:00 +0000

Link: <https://susam.net/multiple-urls-in-git-remote.html>

Typically a Git remote contains a single URL. For example, when we clone a repository, a remote named origin is automatically created and its URL is set to the location of the upstream repository. For example: `$ git remote -v origin https://codeberg.org/spxy/spica.git (fetch) origin https://codeberg.org/spxy/spica.git (push)` `$ sed '/remote/, $!d' .git/config [remote "origin"] url = https://codeberg.org/spxy/spica.git fetch = +refs/heads/*:refs/remotes/origin/* [branch "main"] remote = origin merge = refs/heads/main` A perhaps less known detail is that we can set multiple URLs for a remote. For example: `$ git remote set-url origin --add https://github.com/spxy/spica.git $ git remote -v origin https://codeberg.org/spxy/spica.git (fetch) origin https://codeberg.org/spxy/spica.git (push) origin https://github.com/spxy/spica.git (push)` `$ sed '/remote/, $!d' .git/config [remote "origin"] url = https://codeberg.org/spxy/spica.git fetch = +refs/heads/*:refs/remotes/origin/* url = https://github.com/spxy/spica.git [branch "main"] remote = origin merge = refs/heads/main` As evident from the above output, with multiple URLs for the same remote, the first one becomes the fetch URL whereas all URL...

14. When The Bill Comes Due

Source: Tedium: The Dull Side of the Internet. | Published: 2026-04-29T03:30:00Z

Link:

<https://feed.tedium.co/link/15204/17327554/openai-anthropic-ai-tools-expensive-alternatives>

Be wary of the cool new AI tools Anthropic and OpenAI are throwing?because you?ll eventually get stuck with the bill. (By the way, did you know there are cheaper options?)

15. Reiner Pope ? The math behind how LLMs are trained and served

Source: Dwarkesh Podcast | Published: Wed, 29 Apr 2026 17:07:03 GMT

Link: <https://www.dwarkesh.com/p/reiner-pope>

It's shocking how much you can deduce about what the labs are doing from a handful of equations and a blackboard

16. Never Use the Confirm Dialog

Source: Daniel De Laney | Published: Tue, 08 Sep 2015 00:00:00 +0000

Link: <https://danieldelaney.net/confirm/>

It?s a standard function of all browsers, it?s everywhere, and it?s time to retire it. Here?s an example from JIRA . Trying to ?Cancel? a comment brings up the confirm dialog : Even if we assume confirmation is necessary, the standard confirm dialog is a bad way to get it: Most of what?s shown is junk . The browser logo, the URL of the page, the paragraph that nobody reads?none of it helps me cancel the comment. The buttons are what matter. ?OK? is ambiguous. Buttons should say what they do. If an action is important enough to need confirmation, it?s important enough to need a clear label. ?Cancel? is ambiguous. Clicking ?Cancel? doesn?t cancel my comment. It cancels cancelation. Whoops. Forcing my hand isn?t nice. This dialog hijacks the whole page. There?s a friendlier way to prevent errors. With little effort we can make the dialog better. Let?s do it. We?ll use more thoughtful labeling to make the behavior clearer.

For an added bonus, we can use color to highlight the riskier option: Already we've done better than the confirm dialog. But let's not open the champagne yet. We can do even better. We're still freezing the page every time the user clicks ?Cancel?. This interrupts t...

17. History of PowerDNS 2013-2020, part 3b: the business story

Source: Bert Hubert's writings | Published: Wed, 21 Apr 2021 18:07:06 +0200

Link: <https://berthub.eu/articles/posts/history-of-powerdns-2013-2020-business/>

This part of the history of PowerDNS is mostly about our business adventures & merger with Open-Xchange. The technical history of this period is described in part 3a. Business In 2013, PowerDNS was in a crucial phase. Existing business was going well, but we were receiving pointed signals there was trouble on the horizon. Some existing customers were close to deserting us, because we could not provide them with the top-down attention other vendors were lavishing on them.

18. Useful Spy Books

Source: Bert Hubert's writings | Published: Sun, 18 Apr 2021 13:11:21 +0100

Link: <https://berthub.eu/articles/posts/useful-spy-books/>

Reading a good book is a great joy. And recommending a good book is almost as enjoyable. I've long been fascinated by books on espionage, and this contributed in no small part to me eventually joining the Dutch intelligence world, and later, rejoining it in some fashion. If you have favorite books that should be on this page, please let me know on bert@hubertnet.nl! I'm especially looking for books written from different perspectives.

19. Het gaat om de kerncentrales

Source: Bert Hubert's writings | Published: Sun, 11 Apr 2021 10:44:49 +0200

Link: <https://berthub.eu/articles/posts/het-gaat-om-de-kerncentrales/>

Er is in Nederland een levendige discussie gaande of we in moeten zetten op kernenergie of niet. Afhankelijk van wie je spreekt is kernenergie een groene en noodzakelijke manier om onze CO₂-doelen te halen, of is het overbodige onzin. Ik ben een groot gelover in het idee van kernenergie. Maar onze auto's en huizen kunnen we niet aandrijven met ideeën. Die drijf je aan met kerncentrales. En daar hebben we het nooit over, de kernindustrie.
