

1. It's hard to justify buying a Framework 12

Source: Jeff Geerling | Published: Fri, 29 May 2026 09:00:00 -0500

Link: <https://www.jeffgeerling.com/blog/2026/its-hard-to-justify-framework-12/>

My nephew just graduated high school, and wants a laptop. When he decides what computer to buy, price (or more precisely, value) is the most important attribute. Apple's MacBook Neo upended the 'value laptop' equation? Apple's not supposed to be both the cheapest option and the best value... but it seems like that's squarely where the Neo landed for the good-but-cheap laptop category. My nephew is also my godson, and to kick off his computing journey, I thought I'd let him choose from a Framework 12 I bought to test, or the MacBook Neo I bought a couple months ago to use around the studio.

2. datasette 1.0a31

Source: Simon Willison's Weblog | Published: 2026-05-29T03:32:02+00:00

Link: <https://simonwillison.net/2026/May/29/datasette/#atom-everything>

Release: datasette 1.0a31 Another significant alpha release, with two new headline features.

Datasette now offers users with the necessary permissions the ability to both execute write queries against their database and to save stored queries (renamed from "canned queries") both privately and for use by other members of their Datasette instance. There's more detail in SQL write queries and stored queries in Datasette 1.0a31 on the Datasette blog, which now has three posts introducing new features since the blog launched two weeks ago. Here's an animated demo from the blog post showing how the new execute query interface lets people get started with templated insert/update/delete queries from tables they have permission to edit: Tags: projects , sql , sqlite , datasette , annotated-release-notes

3. markdown-svg-renderer

Source: Simon Willison's Weblog | Published: 2026-05-28T19:45:14+00:00

Link: <https://simonwillison.net/2026/May/28/markdown-svg-renderer/#atom-everything>

Tool: markdown-svg-renderer A slightly customized Markdown rendering tool with special treatment for fenced code SVG blocks - it both renders the image and provides a tab for switching to the code view. You can paste in Markdown or give it a URL to a CORS-enabled Markdown file or Gist. Here's an example where it loads a Markdown file full of LLM pelican logs for Opus 4.8 . 5. ? What Is a Dickover?

Source: Daring Fireball | Published: 2026-05-29T20:58:56Z

Link: https://daringfireball.net/2026/05/what_is_a_dickover

dickover ? a modal panel, popover, or curtain presented by a website or app, deliberately obscuring its own content to frustrate the user with an unwanted, unnecessary, mandatory interaction; e.g. asking the user to accept ?cookies?, subscribe to a newsletter, install the website?s mobile app, agree to terms of service, or anything else that the user couldn?t give two shits about.

6. One Group, Clearly, Is Deranged

Source: Daring Fireball | Published: 2026-05-29T16:22:10Z

Link: <https://paulkrugman.substack.com/p/whos-deranged-exactly>

Paul Krugman, describing a few striking data visualizations: YouGov's surveys subdivide Republicans into those who do and those who don't support MAGA ? and the economic views of these two groups are very different. A remarkable 65 percent of non-MAGA Republicans say that the economy is getting worse, while only 11 percent say that it is getting better. [...] Aside from MAGA Republicans, Americans are bunched at the upper left, with few people seeing the economy getting better and the vast majority seeing it as getting worse. Non-MAGA Republicans are much more similar in their views to independents, and even to Democrats, than they are to MAGA. So how big is the group that believes that we have a good economy? Only 19 percent of Americans. The MAGA/non-MAGA split amongst self-identifying Republicans is striking. Non-MAGA Republicans have views on the economy that almost exactly mirror those of independents ? neither of which are that far from those of Democrats. And let's face it, ?MAGA? is a euphemism for the Donald Trump cult of personality. These are the people who think it's fine, just fine for him to be putting his name on buildings , his signature (and perhaps face) on curr...

7. The Go language server can do some impressive code navigation

Source: Chris's Wiki :: blog | Published: 2026-05-29T01:38:37Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/programming/GoLSPImpressiveCodeNavigation>

For reasons outside the scope of this entry, I recently dug into how the Go runtime did (Unix) signal handling on 64-bit x86 Linux . When I undertook this quest, I decided that the easiest way to navigate through the code of the Go runtime was to use the code navigation features exposed by the standard Go language server, gopls . In the process I was surprised by just how good its code navigation was, even in the Go runtime. On Linux, Go's signal handling talks directly to the Linux kernel rather than going through the C library. As you can imagine, this is relatively architecture and Linux specific, as well as being relatively specific to Unix. The result is a tangle of OS and architecture specific code in a variety of signal related files in src/runtime . The first challenge for code navigation is picking out the right ones that apply to the environment you're interested with; in Go this is handled through build tags, which gopls understand. So gopls had no problem navigating from general Unix signal handling to setsig() in Linux-specific code and the 64-bit x86 Linux definition of the struct involved . But that was only half the puzzle, because I was looking into how the Go run...

8. Online (one-pass) algorithms

Canonical example The sample variance of a set of numbers is defined in terms of the sum of the squared distances from each point to the mean. So it would seem that you first need to calculate the mean, then go back and compute the squared differences from the mean. And yet sample variance can [?] The post Online (one-pass) algorithms first appeared on John D. Cook .

9. The UK Government's Low Value Purchase System is a Waste of Time

Source: Terence Eden's Blog | Published: Fri, 29 May 2026 11:34:54 +0000

Link: <https://shkspr.mobi/blog/2026/05/the-uk-governments-low-value-purchase-system-is-a-waste-of-time/>

It can be hard running a small business. If you want to sell to a large organisation like the UK Government, there are forms to fill in, checks to comply with, tenders to bid on, and a hundred other things. Luckily, there's the RM6237 Low Value Purchase System to make everything better. If a department wants to buy something below a certain threshold, they can contact any of the registered?

10. Composer's dependency policies

Source: Andrew Nesbitt | Published: 2026-05-29T10:00:00+00:00

Link: <https://nesbitt.io/2026/05/29/composer-dependency-policies.html>

Composer 2.10 ships a new config.policy block that puts security advisories, malware reports, abandoned packages, and arbitrary custom blocklists under a single configuration object. Each

list has the same three knobs: block (remove matching versions from the resolver pool), audit (ignore / report / fail), and ignore (per-package exemptions with optional version constraints). The model is the one uBlock Origin and other ad blockers use for their filter lists: named lists published at URLs by whoever maintains them, with a default set enabled and a config slot to subscribe to more or drop any. The malware list is on by default and, unlike the others, also blocks during composer install from a lockfile. A version that was clean when you locked it and has been flagged since is blocked at install, which is a stronger guarantee than composer audit reporting it after the fact. A Composer repository advertises support by setting filter.metadata: true in its packages.json alongside the names of the lists it serves, and Packagist.org currently advertises one, malware , fed by Aikido's feed via composer/packagist#1681 . The per-package metadata files that Composer already fetches during r...

11. Premium: What If...We're In An AI Bubble? (Part 3)

Source: Ed Zitron's Where's Your Ed At | Published: Fri, 29 May 2026 16:58:10 GMT

Link: https://martinalderson.com/posts/whats-going-on-with-gemini/?utm_source=rss&utm_medium=rss&utm_campaign=feed

Google's Gemini 3.5 Flash was the headline model at I/O - fast, but expensive and middling at coding. Why it makes more sense as a model built for Google itself, the TPU advantage, and Google's real weakness in coding agents.

14. Economist Job: my sample articles

Source: Bert Hubert's writings | Published: Sat, 05 Oct 2019 12:52:08 +0200

Link: <https://berthub.eu/articles/posts/economist-job/>

Over the holiday, I ran into this job advertisement from The Economist: The Economist is looking for a new Science and Technology correspondent. Knowledge of the field, an ability to write informatively, succinctly and wittily, and an insatiable curiosity are more important attributes than prior journalistic experience. Please send a CV, a brief letter introducing yourself, and an article of 600 words suitable for publication to xxxx@economist.com. The closing date for applications is August 23rd.

15. GPS, Galileo & More: How do they work & what happened during the big outage?

Source: Bert Hubert's writings | Published: Mon, 30 Sep 2019 20:05:33 +0200

Link: <https://berthub.eu/articles/posts/gps-gnss-how-do-they-work/>

By bert hubert bert@hubernet.nl / @bert_hu_bert / <https://galmon.eu/> Late July 2019, Galileo, the European GPS, suffered from a week long outage. I'm a proud European, and I think we should have our own well-functioning navigation system, so I tried to figure out what was going on. Surely someone was monitoring this stuff in public? I come from the internet where we monitor all the things, if someone asked for it or not.

16. Beidou Satellites Misclassification

Source: Bert Hubert's writings | Published: Mon, 02 Sep 2019 08:37:13 +0200

Link: <https://berthub.eu/articles/posts/beidou-satellites/>

Hi everyone, As noted previously I've gone all in on GNSS monitoring. GNSS is the generic term for GPS, Galileo, GLONASS and BeiDou satellites. Eventually a big blog post will come out, but meanwhile you can see the results on galmon.eu. A few days ago, an unknown GLONASS satellite started transmitting signals on slot R26 and I tried to figure out which one it was. By definition, GNSS satellites broadcast their own very precise location & speed, which makes it possible to match up their orbit to published TLEs, which document where objects in space are.
