

1. Who Runs the Ransomware Group ?The Gentlemen??

Source: Krebs on Security | Published: Wed, 10 Jun 2026 14:03:44 +0000

Link: <https://krebsonsecurity.com/2026/06/who-runs-the-ransomware-group-the-gentlemen/>

A cybercrime group known as The Gentlemen has emerged as the second most active ransomware gang by victim count, rapidly attracting a talented pool of hackers through an aggressive recruitment strategy that promises affiliates 90 percent of any ransom paid by victims. This post examines clues pointing to a real life identity for the administrator of The Gentlemen ransomware group.

2. Craig Federighi Details Apple?s Collaboration With Google for Siri AI ? Live, on Stage

Source: Daring Fireball | Published: 2026-06-11T00:48:52Z

Link: <https://9to5mac.com/2026/06/08/craig-federighi-details-apples-collaboration-with-google-f-or-siri-ai-in-ios-27/>

Chance Miller, at 9to5Mac on Monday: Apple?s Siri team, led by Craig Federighi, held a post-WWDC keynote tech talk with members of the press this afternoon to talk through iOS 27 and the new Siri AI. During the talk, Federighi shared more details about Apple?s collaboration with Google. Federighi was joined by Amar Subramanya (vice president of AI), Mike Rockwell (Siri lead), and Sebastien Marineau-Mes (software VP). On the Google collaboration, Federighi explained: Of course, we don?t have the Gemini app as our app. In fact, none of that client code is part of how we run on iOS. For these models, we use none of the models that Google deploys to their customers, nor do we use the infrastructure and means by which they deploy models to their customers. And then, when it comes to the knowledge base, we of course don?t use Google Search or anything like that as the foundation of our system. So I hope that?s clear. The amount of the Google Assistant we use is none. So let?s talk about what we do use, or how our system is built. This ?Tech Talk? was good. It was detailed and technical, and there were live on-stage demos of Siri AI in action from Mike Rockwell. I don?t think Apple is ev...

3. ? Sweet Jeebus, MacOS 27 Golden Gate Removes the Dumb Icons From Menu Items

Source: Daring Fireball | Published: 2026-06-11T00:09:01Z

Link:

https://daringfireball.net/2026/06/macOS_27_golden_gate_removes_the_dumb_icons_from_menu_items

This is my favorite news from all of WWDC this week. I mean that. In a small way I mean it because I so loathe this aspect of MacOS Tahoe. But in a large way I mean it because it?s proof that the rot has been rooted out of Apple?s software design team.

4. Apple?s WWDC AI Demos Were Real and in Real Time

Source: Daring Fireball | Published: 2026-06-09T17:38:21Z

Link: <https://techcrunch.com/2026/06/08/apples-wwdc-ai-demos-looked-more-real-after-250m-false-ad-settlement/>

Julie Bort, TechCrunch: But the most telling detail wasn?t what Apple announced. It was how it chose to show some things off. Many of the Apple Intelligence demos featured someone standing, phone in hand, pressing buttons or using voice commands in real time, while another camera showed off the phone?s response. These weren?t live onstage, anything-could-go wrong demos; they were pre-taped. But they looked far more like proof of working features than what Apple showed at WWDC 2024, when the company unveiled Apple Intelligence and a new Siri to the world through slickly produced videos that turned out to be more promise than product. The demos were all shot in single takes, with no editing. In fact, I think most of them were single takes of multiple demos back-to-back. That?s the way it should be, even when they feel a little slow. When a demo feels slow, the solution isn?t to edit the video ? it?s to make the feature work faster. ?

5. datasette-agent 0.2a0

Source: Simon Willison's Weblog | Published: 2026-06-10T23:57:27+00:00

Link: <https://simonwillison.net/2026/Jun/10/datasette-agent/#atom-everything>

Release: datasette-agent 0.2a0 Highlights from the release notes: Tools can now ask the user questions mid-execution. Tools that declare a context parameter receive a ToolContext object, and await context.ask_user(...) can ask a yes/no, multiple-choice (options=[...]) or free-text (free_text=True) question. While a question is unanswered the agent turn suspends: the question renders as a form in the chat UI and persists to the internal database, so suspended conversations survive a server restart. Once answered, the tool re-executes from the top with stored answers replayed, so call ask_user() before performing side effects. #20 New built-in save_query tool: the agent can save SQL it has written as a Datasette stored query . Saving always requires human approval - the agent shows the full SQL plus the proposed name, database and visibility, and nothing is stored until you click Yes. #20 The ask_user() feature was enabled by the new LLM alpha I built yesterday with the help of Claude Fable 5. 6. DiffusionGemma

Source: Simon Willison's Weblog | Published: 2026-06-10T20:00:54+00:00

Link: <https://simonwillison.net/2026/Jun/10/diffusiongemma/#atom-everything>

DiffusionGemma Last May Google briefly released an experimental Gemini Diffusion model. I tried the preview at the time and recorded it running at 857 tokens/second. It was an exciting model, but Google made no further announcements about it. That research has returned in the best possible way: as a new open weight (Apache 2 licensed) Gemma model, google/diffusiongemma-26B-A4B-it . NVIDIA are currently hosting the model for free on their NIM cloud API. I used that API to generate this pelican , which took 4.4s (according to time uv run generate.py) to return 2,409 tokens - so at least 500 tokens/second. Easy solution to slow down recursive AI self improvement: The lab with the top-ranked model must agree THEY must not use it for working on frontier AI But everyone else should have access to it. By definition, this means the frontier doesn't advance. It also has the critical benefit of avoiding a dangerous power imbalance. Anthropic has chosen the opposite of the safe path: they are allowing themselves, the current top lab, to use their top model for frontier AI research. They've said they'll sabotage others who try. This means the AI frontier advances, & power imbalance increases. (To be clear, I don't think we should try to slow down recursive AI self improvement - I think we should open it up and democratize it as much as possible. My point is: if you claim we should slow down, and you have the best model, you should ensure your org can't use it.) ? 8. Please, use a link!

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Wed, 10 Jun 2026 20:30:00 GMT

Link: <https://idiallo.com/blog/use-a-link-please>

This is a rant. It didn't start today, but I think I've reached the end of the line. The straw that broke the camel's back, so to say. I used an internal tool for the first time. I logged in and navigated through the web app, making some updates here and there. All was well. But then I made the mistake of wanting to go back to the initial dashboard. I clicked the back button, and instead of returning to the previous page, I saw Chrome's default tab page staring right back at me. How is it possible? I had navigated through at least a dozen pages, yet one back button click and the web app was completely gone. If you've ever experienced something similar, it's probably because you were using a single-page app. Nothing wrong with single-page apps, of

course, but over the years I've concluded that people who only know how to build single-page apps don't know what a link is. So let's start with examples of what a link isn't. Home Not a link. It's a div with an onclick event handler. You can style it all you want, but it's not a link. Home This may be a button, but it is not a link. With the advent of React, this has become so common. Because it's called a button, learners naturally grav...

9. Gaslighting Openness

Source: Armin Ronacher's Thoughts and Writings | Published: 2026-06-10T00:00:00+00:00

Link: <https://lucumr.pocoo.org/2026/6/10/gaslighting/>

I have been a staunch supporter of Open Source for a long time, including experiments in funding it. I'm a true believer in the idea that Open Source always wins in the long run, but not automatically and not quickly. Right now it is being stressed by AI slop, shifting contributor dynamics, the falling cost of producing code, and large companies learning to close doors behind them. A lot of that battle today is manipulation of the narrative. Opinion makers on social media and in business circles increasingly frame access as irresponsibility. That is why the EU's DMA matters, even if many people (including myself) reflexively hate EU regulation. Apple's fight over delayed AI features in Europe is not about Brussels being annoying: it is about whether users can access their own devices and data. The phone is yours, the data is yours, yet Apple decides who may reach it and takes the agency away from you and then tries to make that sound like it is in your interest (supposedly it's for your safety and security). The closer you get to the core of AI, the more this shows up. Anthropic has every financial incentive to restrict what people can do with Mythos and Fable, and they wrap tho...

10. Formally proving a calculation with Claude and Lean

Source: John D. Cook | Published: Wed, 10 Jun 2026 23:11:01 +0000

Link: <https://www.johndcook.com/blog/2026/06/10/claude-and-lean/>

I ran an experiment today to see whether Claude could generate Lean code to prove a calculation at the bottom of this post, six lines of calculus. I started with this prompt This page contains a mathematical proof that a Fourier coefficient, a_n , is given in terms of a Bessel function. The LaTeX source for [?] The post Formally proving a calculation with Claude and Lean first appeared on John D. Cook.

Often there's a thread running through a sequence of my posts. Sometimes I make this explicit and sometimes I don't. The latest thread started with this post commenting on a tweet that observed that $\exp(xt) \approx (1 + \cos(\sin(x) + x))/2$. Some people said online that that the approximation is simply due to the first [?] The post Pulling on a thread first appeared on John D. Cook.

12. My Firefox addons as of Firefox 151 (and the current development version)

Source: Chris's Wiki :: blog | Published: 2026-06-10T22:11:54Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/web/Firefox151Addons>

Back in 2022 I said that my Firefox addons hadn't changed in a while, and while that's still mostly true there's been some minor changes that I want to write down. Addons are central to my Firefox experience, but I don't change them very often partly because of that and partly because I'm much more conservative with Firefox than I am with things like Emacs packages. I'm generally happy with my Firefox environment and most of what I do with it is stop irritating changes and fix things that get turned off. Of my old addons in my main Firefox setup, I still use Foxy Gestures, uBlock Origin, uMatrix (which is still not quite dead), Cookie AutoDelete, Stylus, Textern, Certainly Something, HTTP/2 Indicator, ClearURLs (although that may be ineffective these days), and Open in Browser, although I'm not sure that's doing anything for me. I no longer use HTTPS Everywhere. Because I switched from Firefox's default "storage partitioning" for cookies to the stricter "first party isolation", I had to switch from Cookie

Quick Manager , which I don't think works with either of them, to Cookie Manager , which does work with first party isolation as far as I can tell. In my main Firefo...

13. Making extensions work on file: URLs in Firefox 153

Source: Chris's Wiki :: blog | Published: 2026-06-10T02:38:48Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/web/Firefox153AddonsOnFileUrls>

So today I had a learning experience : Firefox Nightly apparently has decided to not allow extensions/addons to run for file:/// URLs and I am sorry, this completely breaks my environment (my startup page is a file:/// URL) and I find it infuriating. Maybe I can find some hidden toggle for this somewhere. This is relevant to me because my start page is a local HTML file and I'm a long time user of Foxy Gestures (cf), which I expect to work on my home page. When it doesn't, I get upset. This turns out to be bug 2034168, Add explicit permission for file:-access and implement extension.isAllowedFileSchemeAccess() , the components of which landed in Firefox Nightly on May 29th. Fortunately there's a way to allow extensions to still work on file: pages , but it's a bit annoying. Extensions can have per-extension additional permissions, and this change adds a new such permission, "Access local files on your computer" . But since this is a per-extension setting, you have to go through each of your extensions (at least the ones this is relevant for) and turn it on, and this permission landed only with the change, so the first time you start Firefox all your extensions will be broken. (O...

14. Book Review: The Husbands by Holly Gramazio ?????

Source: Terence Eden's Blog | Published: Wed, 10 Jun 2026 11:34:55 +0000

Link: <https://shkspr.mobi/blog/2026/06/book-review-the-husbands-by-holly-gramazio/>

Ooooh! This is a lovely treat of a book. Every time Lauren sends her husband into the loft, a different man comes down. Her past is rewritten and she has now been married to Dave/Gary/Bob/Whoever for a year, a month, a decade, a minute. This isn't like how Groundhog Day became On The Calculation of Volume or Sliding Doors became The Names, instead this is a new and twisty concept rendered?

15. Nontrailing separators do not spark joy

Source: Computer Things | Published: Wed, 10 Jun 2026 12:22:04 +0000

Link: <https://buttondown.com/hillelwayne/archive/nontrailing-separators-do-not-spark-joy/>

This is valid JSON: { "a" : 1 , "b" : 2 , "c" : 3 } This is invalid JSON: { "a" : 1 , "b" : 2 , "c" : 3 , } The difference is the last comma. The JSON grammar specifies that a comma can separate two members of an object but not postcede ("trail") a member. I think this was a design mistake. Say we want to add two new keys to the struct, one before the "a" member and one after the "c" member. Here's what it would look like if trailing commas were permitted: { + "x": 0, "a": 1, "b": 2, "c": 3, + "y": 4, } It's the exact same text transformation regardless of where we add the key. In the current model, we instead have this: { + "x": 0, "a": 1, "b": 2, - "c": 3 + "c": 3, + "y": 4 } Those are different transformations! Similarly if you want to remove an element, you can't just delete the corresponding line 1 , you have to delete the line and then check that the last line doesn't have a trailing comma. Don't even get me started on all the special cases involved in swapping two lines. JSON isn't the only language with this problem. Haskell writes record types like this: -- from <https://play.haskell.org/> data Drone = Drone { xPos :: Int , yPos :: Int , zPos :: Int } This "partial bullet p...

16. Being ?Good? at Things

Source: Jim Nielsen's Blog | Published: Wed, 10 Jun 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/good-at-things/>

Golf content on social media is my online junk food and the other day I came across a video interviewing professional golfers that asks: ?What does an amateur golfer have to shoot to be considered good?? It?s a leading question because the phrasing implicitly frames a number as the answer for a qualitative measurement , but I digress. All the pros give their answers. Some say you gotta shoot a number in 90?s. Others say the 80?s. Some even say the 70?s. Then along comes Collin Morikawa: I don?t think there?s a number, but I think you have to be able to

finish out every hole without, like, picking up a two-footer. Love it! I don't want to go too deep on a social media golf interview clip, but? I love how he breaks out of the question's implicit framing and really strikes at the heart of the qualitative question: "What does it mean to be good at golf?" Being "good", in his eyes, is not shooting a specific number. Numbers are standardized proxies for measurement across a wide variety of players, skill levels, and ? to be quite frank ? degrees of honesty. Anyone who has played golf knows that scores can be easily manipulated. On a casual outing amongst friends, my "82" may be very dif...

17. Weekly Update 507

Source: Troy Hunt | Published: Wed, 10 Jun 2026 05:31:56 GMT
