

1. Publishing WASM wheels to PyPI for use with Pyodide

Source: Simon Willison's Weblog | Published: 2026-06-13T23:55:18+00:00

Link: <https://simonwillison.net/2026/Jun/13/publishing-wasm-wheels/#atom-everything>

The Pyodide 314.0 release announcement (via Hacker News) includes news I've been looking forward to for a long time: You can now publish Python packages built for Pyodide (or any Python runtime compatible with the PyEmscripten platform defined in PEP 783) directly to PyPI and install them at runtime. Previously, the Pyodide maintainers had to maintain, build, and host over 300 packages ourselves. This created a significant burden on our maintainers and became a major bottleneck for the community, as every new package required manual review. Moving forward, package maintainers can simply build and publish Pyodide wheels to PyPI, just as they do for native wheels on Linux, macOS, or Windows. Here's the PR to PyPI itself supporting this , which landed on April 21st. I adore Pyodide , and have been frustrated in the past by this limitation. It's possible to compile C or Rust extensions to WASM in a wheel file, but before now there was no easy way to distribute them. Thanks to the efforts of a whole lot of people, that's now been fixed! Trying it out with luau-wasm I decided to celebrate by finding something I could package. I have quite a few experimental Pyodide projects lying arou...

2. luau-wasm 0.1a0

Source: Simon Willison's Weblog | Published: 2026-06-13T23:14:30+00:00

3. Mapping SQLite result columns back to their source 'table.column'

Source: Simon Willison's Weblog | Published: 2026-06-13T23:05:00+00:00

Link: <https://simonwillison.net/2026/Jun/13/sqlite-column-provenance/#atom-everything>

Research: Mapping SQLite result columns back to their source 'table.column' It would be neat if arbitrary SQL queries in Datasette could be rendered with additional information based on which columns from which tables were included in the results. To build that, we would need to be able to look at a SQL query like `select users.name, orders.total from users join orders on orders.user_id = users.id` and programmatically identify the `table.column` for each result - navigating not just joins but also more complex syntax like CTEs. I decided to set Claude Code (Opus 4.8, since Fable is currently banned by the US government) on the problem. It found several promising solutions - one using `apsw` , another that uses `ctypes` to access the SQLite `sqlite3_column_table_name()` C function (which is not otherwise exposed to Python), and one using clever interrogation of the output of `EXPLAIN` . 4. Trump's Name (Set in the Wrong Font, of Course) Has Been Removed From the Kennedy Center

Source: Daring Fireball | Published: 2026-06-13T17:34:15Z

Link: <https://apple.news/ANLNtQOeuSkiJ35tzkYw9oA>

Jonathan Edwards reporting for The Washington Post: President Donald Trump's name is off the Kennedy Center. Crews at the performing arts venue started removing it from the front of the building around 3 a.m., several hours after the center missed a federal judge's two-week deadline to do so. The judge had ruled that the decision by the center's board of trustees to rename it was illegal. A perfect metaphor for the work ahead of us. ?

5. Apple's Private Cloud Compute Is Severely Limited for Third-Party Developers

Source: Daring Fireball | Published: 2026-06-13T17:20:59Z

Link: <https://developer.apple.com/private-cloud-compute/>

From Apple's Developer site: To ensure getting started with a large cloud model is as

accessible as possible, developers in the App Store Small Business Program with fewer than two million first time App Store downloads will be able to use Apple Foundation Models running on Private Cloud Compute (PCC) with no cloud API cost. The model provides access to frontier level intelligence with unparalleled privacy protections. This makes it easy for small developers to get started building intelligent app experiences without upfront infrastructure costs.

Eligibility requirements Access to PCC is available to developers who meet the following criteria: Are enrolled in the App Store Small Business Program . Have fewer than 2 million first-time app downloads from any of their apps on the App Store. Have the Private Cloud Compute entitlement assigned to their account . Where Apple Intelligence is available, eligible developers can use PCC in their apps distributed on the App Store, and test PCC features via TestFlight or ad hoc distribution. Installs during testing are not counted as first-time app downloads. If any app subsequently exceeds the 2 million first-time downloads threshold, or the...

6. U.S. Government Directs Anthropic to Shut Down Fable 5 and Mythos 5 Models on National Security Grounds

Source: Daring Fireball | Published: 2026-06-13T17:02:29Z

Link: <https://www.anthropic.com/news/fable-mythos-access>

Anthropic: The US government, citing national security authorities, has issued an export control directive to suspend all access to Fable 5 and Mythos 5 by any foreign national, whether inside or outside the United States, including foreign national Anthropic employees. The net effect of this order is that we must abruptly disable Fable 5 and Mythos 5 for all our customers to ensure compliance. Access to all other Anthropic models will not be affected. We received the directive from the government today at 5:21pm (ET). The letter did not provide specific details of its national security concern. Our understanding is that the government believes it has become aware of a method of bypassing, or ?jailbreaking? Fable 5. We reviewed a demonstration of this specific technique being used to identify a small number of previously known, minor vulnerabilities. These vulnerabilities all appear relatively simple, and we have found that other publicly-available models are able to discover them as well without requiring a bypass. Fable 5 and Mythos 5 were announced on Tuesday ? that post has detailed comparisons, from Anthropic, on the models? capabilities. Having the access ban extend all the...

7. The adder at the heart of Intel's 8087 floating-point chip

Source: Ken Shirriff's blog | Published: 2026-06-13T08:56:00.314-07:00

Link: <http://www.righto.com/2026/06/intel-8087-adder-reverse-engineered.html>

In 1980, Intel released the Intel 8087 floating-point coprocessor, a chip that could make math up to 100 times faster. As well as arithmetic and square roots, the 8087 computed transcendental functions including tangent, exponentiation, and logarithms. But it all depended on a 69-bit adder: "The arithmetic heart of the floating-point execution unit is centered about a nanomachine comprised of the adder and its related registers, shifters and control circuitry," as the patent describes it. In this article, I explain the circuitry of this adder. The photo below shows the 8087 die under a microscope. Around the edges of the die, hair-thin bond wires connect the chip to its 40 external pins. The complex patterns on the die are formed by its metal wiring, as well as the polysilicon and silicon underneath. At the top of the chip, the Bus Interface Unit connects to the rest of the system: coordinating with the main 8086 processor and memory. The chip's instructions are defined by the large microcode ROM in the middle. Die of the Intel 8087 floating-point unit chip, with relevant functional blocks labeled. The die is 5mm×6mm. Click for a larger image. The bottom half of the die is the "da...

8. RSA munitions T-shirt

Source: John D. Cook | Published: Sat, 13 Jun 2026 20:10:20 +0000

Link: <https://www.johndcook.com/blog/2026/06/13/rsa-munitions-t-shirt/>

Back when the US government classified strong encryption as ?munitions,? RSA public key cryptography was illegal to export. In 1995, Adam Back protested this by creating a terse, obfuscated implementation of RSA in Perl code and used it as an email signature. The code was

also printed on T-shirts. The shirt was classified as munitions [?] The post RSA munitions T-shirt first appeared on John D. Cook .

9. Dangerous Technology For Americans Only

Source: Armin Ronacher's Thoughts and Writings | Published: 2026-06-13T00:00:00+00:00

Link: <https://lucumr.pocoo.org/2026/6/13/americans-only/>

There is a bit of schadenfreude on Twitter right now about Anthropic being hit by the US government's export control directive to suspend access to Fable and Mythos . Anthropic and their leadership have spent a lot of time and effort describing its own technology as dangerous and in need of strict controls and regulation. Now that the US government appears to have taken that framing seriously and told them to turn it off for foreign nationals I can see why people are making fun of that situation. I understand the reaction, but I urge you to not entertain it for too long because it is a giant distraction. The important part is not that Anthropic's safety language came back to bite them but the line the US government is drawing: this technology is apparently so powerful that only Americans should have it. We are on a clear path towards a world of division. One should think that if a model is too dangerous for everyone, then it is too dangerous for Americans too. Instead the US is treating these models like weapons that need to be controlled. It is not just about capabilities, it is about racism and nationalism. If you have the wrong passport, you are not to be trusted. This is a ver...

10. This Week in Package Management: 13 June 2026

Source: Andrew Nesbitt | Published: 2026-06-13T10:00:00+00:00

Link: <https://nesbitt.io/2026/06/13/this-week-in-package-management.html>

Week four of the roundup, built from the package manager OPML feed collection and whatever I've posted or boosted on Mastodon . Security GitHub announced the breaking changes coming in npm v12 , estimated for July. npm install will stop running dependency lifecycle scripts unless they're allowed via the allowScripts field that 11.16.0 introduced in advisory mode, covered in the install-script allowlists post I wrote last week. Implicit node-gyp builds are blocked too, so a package with a binding.gyp and no install script needs approval like any other. Git dependencies and remote URL tarballs also stop resolving by default, each behind a new --allow-git / --allow-remote flag. Everything ships behind warnings in npm 11.16.0+ today. uv audit is a new preview command that scans Python dependencies for known vulnerabilities and adverse project statuses like deprecation, a uv-native alternative to pip-audit. The same announcement covers an experimental malware check: uv add and uv sync can look up previously-resolved packages against OSV on every sync, behind UV_MALWARE_CHECK=1 . pnpm 11.5.3 , backported to 10.34.2 , hardens the packageManager bootstrap path. The registry and proxy sett...

On people who use AI to think.

13. Building an serial and VGA "everything console"

Source: Old Vintage Computing Research | Published: 2026-06-13T18:26:37.897-07:00

Link: <https://oldvcr.blogspot.com/2026/06/building-serial-and-vga-everything.html>

Some of our recent (and some upcoming) projects are oriented to systems with serial consoles, but it's been getting pretty old dragging around old CRT terminals or tying up Mac laptops with a serial port. I'd like something that's self-contained, a little more portable and a bit less

heavy. I'm sure there's any number of all-in-one setups you can buy to do this, but I'm cheap, so I'm going to DIY it. We'll start with this used, slightly abused IBM 1U console that I got for \$120 (shipped) from eBay, add a terminal emulator, and put all the fixin's on. Nearly every server company produces one of these. They slide into a regular 19" rack and provide a flip-up LCD screen and keyboard in 1U. This was an IBM 7316-TF3 with a 17" screen and a combo keyboard-mouse slimline keyboard. IBM apparently manufactured these from 2004 to 2014 , so it's almost on-topic for this blog, even. I chose it because it was a little banged up and the LCD had some areas of damage (probably improperly closed on something), and the seller had priced it accordingly, but the screen was still sufficiently legible and the keyboard looked fine. Naturally you can do mostly what we're doing here with any of the simila...

14. Pluralistic: Shareholder supremacy and the precog CEO (13 Jun 2026)

Source: Pluralistic: Daily links from Cory Doctorow | Published: Sat, 13 Jun 2026 17:49:56 +0000

Link: <https://pluralistic.net/2026/06/13/minority-shareholder-report/>

Today's links Shareholder supremacy and the precog CEO: A bright line test that's totally unfalsifiable. Hey look at this: Delights to delectate. Object permanence: Msft v Linux geeks; James Joyce scholars v Joyce estate; iPod sweatshops; Pratchett initiates assisted suicide; Lego-making machine made of Lego; Laid off workers v gag clauses; The ACCESS Act. Upcoming appearances: LA, Menlo Park, Toronto, NYC, Philadelphia, Chicago, Edinburgh, South Bend. Recent appearances: Where I've been. Latest books: You keep readin' em, I'll keep writin' 'em. Upcoming books: Like I said, I'll keep writin' 'em. Colophon: All the rest. Shareholder supremacy and the precog CEO (permalink) It's been 55 years since Milton Friedman ? cursed be his name ? published his NYT editorial, "The Social Responsibility of Business Is to Increase Its Profits," in which he invented the idea of shareholder supremacy out of whole cloth and declared it to be a universal, freestanding, inarguable truth: <https://www.nytimes.com/1970/09/13/archives/a-friedman-doctrine-the-social-responsibility-of-business-is-to.html> Friedman's editorial railed against the idea of "corporate social responsibility," arguing that corpora...
