

1. K?k?p? Party

Source: Simon Willison's Weblog | Published: 2026-09-26T23:39:06+00:00

Link: <https://simonwillison.net/2026/Sep/26/kakapo-party/>

Tool: K?k?p? Party I presented a closing keynote for the WeAreDevelopers World Congress North America yesterday. As a STAR moment I decided to weave in references to the record breaking k?k?p? breeding season we had in 2026. For my closing slide I wanted to celebrate, and I had seen some buzz around how good Claude Opus 5.5 was at creating pixel art animations. So I rounded up three Kakapo photos from Google image search and dropped them into Claude with this prompt: Here are some photos of kakapo parrots just to remind you what they look like I need you to make an animation in animated pixel art on HTML 5 canvas of obviously pixel art kakapo jumping up and down having a party with confetti and suchlike - there should be at least 20 of them Here's the transcript , and this is the resulting page . It's pretty great! I wanted to embed it in a Keynote presentation file, so I downloaded the HTML and told a local Claude Code session: Make me a video of file:///Users/simon/Downloads/kakapo-party.html - you need to load it in a browser and click on it a few times to get the confetti effect, the video should be 15s long don't start clicking until 3s in make sure several clicks are spread...

2. llm-typesafe 0.1a0

Source: Simon Willison's Weblog | Published: 2026-09-22T15:54:16+00:00

Link: <https://simonwillison.net/2026/Sep/22/llm-typesafe/>

Release: llm-typesafe 0.1a0 I built this new plugin for LLM to add support for TypeSafe AI's new Jev model . Install it like this: llm install llm-typesafe Then set an API key (get one here , the waitlist seems to move pretty fast): llm keys set typesafe # Paste key And now you can ask yes/no "noul" questions like this: llm -m jev 'Please refund my last payment.' \ -s 'Does this message explicitly request a refund?' Output: {"type": "noul", "noul": 0.99} Or choice questions like this: cat message.txt | llm -m jev \ -s ' Which team should handle this message? If billing and technical issues both occur, choose billing. ' \ -o answer_type choice \ -o criteria ' { "billing": "Charges, invoices, payments, or refunds", "technical": "Problems installing or using the product", "other": "Neither category fits" } ' Or scoring questions like this: cat report.txt | llm -m jev \ -s ' How reproducible is the problem described in this report? ' \ -o answer_type score \ -o criteria ' ["No reproduction instructions", "Some instructions, but important steps are missing", "Complete steps with expected and actual results"] ' See the README for more details. Tags: projects , llm , jev

3. Bonsai 2 27B: Near-Lossless Compression in a 9x Smaller Footprint

Source: Simon Willison's Weblog | Published: 2026-09-17T22:13:05+00:00

Link: <https://simonwillison.net/2026/Sep/17/hn-49747390/>

My comment on Bonsai 2 27B: Near-Lossless Compression in a 9x Smaller Footprint ? Hacker News. If you want to try out the GGUFs from

<https://huggingface.co/prism-ml/Ternary-Bonsai-2-27B-gguf#th...> be aware that you need Prism's llama.cpp fork to get them to work, from

<https://github.com/PrismML-Eng/llama.cpp/releases/tag/prism-...> This should work: cd /tmp # Get the Prism macOS runtime curl -fL <https://github.com/PrismML-Eng/llama.cpp/releases/download/prism-b10685-7dff15/llama-prism-b10685-7dff15-bin-macos-arm64.tar.gz> -o bonsai-runtime.tar.gz tar -xzf bonsai-runtime.tar.gz # Get the ~5.95 GB GGUF model: curl -fL https://huggingface.co/prism-ml/Ternary-Bonsai-2-27B-gguf/resolve/main/Ternary-Bonsai-2-27B-PTQ1_0.gguf -o Ternary-Bonsai-2-27B-PTQ1_0.gguf # Run the server, I used port 8331

./llama-prism-b10685-7dff15/llama-server \ -m Ternary-Bonsai-2-27B-PTQ1_0.gguf \ --port 8331 -ngl 99 -fa on -c 32768 Then open <http://localhost:8331> for the (very good) baked in llama-server web UI... or run a prompt via the API like this: uvx llm openai endpoint <http://127.0.0.1:8331/v1> \ --model bonsai-2-27b --responses hi That's running at ~20 token/second for me on an M5 Pro (after a serv...

4. Reelizer Returns

Source: Daring Fireball | Published: 2026-09-26T21:08:08Z

Link: <https://www.reelizer.com/>

Back in 2011 I linked to Reelizer, a splendid archive of movie posters curated by Roger Erik Tinch . Reelizer went away for a few years, but Tinch has brought it back, seemingly better than ever. Huzzah. ?

5. Alexandr Wang: ?Why I?m Building Muse?

Source: Daring Fireball | Published: 2026-09-26T20:34:54Z

Link: https://x.com/alexandr_wang/status/2103551714536439951

Alexandr Wang, blogging on X: Now imagine every person on earth with a second mind beyond their own. A general manager whose whole job is to find out what you want and make sure it happens. Someone that hears the half-sentence, ?I feel like there?s something more I could be doing,? and helps fill in the blanks. This might not be a genie in a bottle, but it can be someone that says, ?This is the thing you?ve been dreaming of your whole life. Let?s go get it. Here?s how.? And then builds a plan. Sends the email. Makes the phone call. Finds the funding. Keeps you on schedule. Clears the way and solves all the problems it can until the human part, the wanting and the dreaming, is all that?s left. Via Manton Reece , who writes: This is a mission statement. It?s ambitious and clear. Compared to Meta?s usual ?connecting people? pitch ? which we just translate to ?scale to everyone and serve ads? ? this new statement from Alexandr feels almost shockingly personal and new. ?

6. Apple?s Other Recent ?Duo?

Source: Daring Fireball | Published: 2026-09-26T19:41:39Z

Link: <https://support.apple.com/en-us/111812>

I keep mentioning Apple?s 1992 groundbreaking PowerBook Duo series as a precedent of the iPhone Duo?s name. But of course in 2020, Apple released the MagSafe Duo Charger, a wonderful Lightning peripheral for charging an iPhone and Apple Watch at the same time. It even folded. A brief note on the PowerBook Duo, while I?m at it. I got an email this month from a now-retired former Apple employee who helped spearhead that project, and he emphasized that the internal motto was always ?Best of Both Worlds?, abbreviated internally to just ?BOBW?. At the time, laptops were just profoundly less powerful than desktop computers, but desktop computers of course were the opposite of ?portable?. The Macintosh Duo was a terrific success, because it really did achieve that ?best of both worlds? experience. Here?s a 2015 retrospective on the PowerBook Duo by Christopher Phin that captures and illustrates just how groundbreaking it was. BOBW is exactly what the iPhone Duo needs to be. It needs to be a great iPhone on the outside, and a great mini tablet on the inside. ?

7. Reverse-engineering the vintage Intel 8087?s tangent algorithm: more than CORDIC

Source: Ken Shirriff?s blog | Published: 2026-09-26T09:20:56.564-07:00

Link: <http://www.righto.com/2026/09/8087-tangent-cordic.html>

I hope you?re not tired of the 8087, because I have another article about Intel?s floating-point chip. 1 In 1980, Intel introduced the 8087, making floating-point operations much faster in the IBM PC and other systems. In this article, I look at the algorithm behind the chip?s tangent instruction. One popular approach for trigonometric functions is an algorithm called CORDIC. Another approach is a polynomial approximation. The 8087 combined the two to obtain both high accuracy and high performance. The 8087 provided an enormous speedup over the 8086 microprocessor, computing a tangent in 90 microseconds rather than 13,000 microseconds. 2 By examining the circuitry and microcode of the 8087, I can explain the algorithm behind the tangent instruction, called FPTAN . To explore the 8087?s circuitry, I popped the lid off a chip with a chisel and created a high-resolution image with a microscope. The microcode ROM is the large rectangular region in the center of the die, holding the 1648 micro-instructions that control the chip. The bottom half of the chip (red box) is the datapath, the circuitry that performs floating-point calculations on 80-bit values. 3 A

8. This Week in Package Management: 26 September 2026

Source: Andrew Nesbitt | Published: 2026-09-26T10:00:00+00:00

Link: <https://nesbitt.io/2026/09/26/this-week-in-package-management.html>

Week nineteen of the roundup, built from the package manager OPML feed collection and whatever I've posted or boosted on Mastodon . Releases pnpm 12.6 adds an autoDedupe setting that resolves compatible dependency versions to a single one during install, and pnpm add --save-types for the matching @types/* package. 12.7 has the global node shim read .nvmrc and .node-version when devEngines.runtime is unset, and adds pnpm publish --publish-wait-timeout to block until a published package is available before dependents publish. RubyGems 4.1.0.beta1 adds content-addressable gems, an opt-in OS credential store for gem and Bundler credentials, ML-DSA post-quantum signatures for the signed-gem workflow, and a --cooldown flag on gem install , update and outdated . npm 12.1.0 supports read-write-stage-only granular access tokens for staged publishing, and npm stage reports the status of packages held in staging. A --provenance-file argument now takes precedence over OIDC-generated provenance. Poetry 2.5.0 adds an installer.builtin-uninstall setting that removes packages itself instead of calling pip, supports Python 3.15, and stops sending credentials configured for an HTTPS repository over...

9. No errors, no warnings, no gods, no masters - HTML Purity is a Fetish

Source: Terence Eden's Blog | Published: Sat, 26 Sep 2026 11:34:02 +0000

11. Rusty thoughts on "Parse, don't validate"

Source: Eli Bendersky's website | Published: 2026-09-26T08:25:00-07:00

Link: <https://eli.thegreenplace.net/2026/rusty-thoughts-on-parse-dont-validate/>

Like many programmers, I find Alexis King's Parse, don't validate article fascinating, because it gives a name to an idiom that seems familiar and important - one I've observed and used in the past without naming it explicitly. This post is a review of the "Parse, don't validate" pattern applied to ?
