### 2. LLM clich  highlighter

Source: Simon Willison's Weblog | Published: 2026-07-17T12:11:11+00:00

Link: <https://simonwillison.net/2026/Jul/17/llm-cliche-highlighter/#atom-everything>

Tool: LLM clich  highlighter I got frustrated reading yet another article that was crammed with the clich s of LLM-generated writing - "no fluff, no filler, no jargon" type stuff - so I had Fable 5 vibe code up this app for highlighting ten common patterns that show up in that sort of writing. On file deletions. We've investigated a handful of reports where GPT-5.6 unexpectedly deleted files. What we have found is that this most commonly occurs when: Full access mode is enabled and codex is run without sandboxing protections, including without auto review being enabled The model attempts to override the \$HOME env var to define a temporary directory. The model makes an honest mistake and mistakenly deletes \$HOME instead. ? Thibault Sottiaux , describing a pretty gnarly Codex bug Tags: codex , coding-agents , generative-ai , ai , llms

### 4. Overtraining as the path to human-like AI

Source: seangoedecke.com RSS feed | Published: Sat, 18 Jul 2026 00:00:00 GMT

Link: <https://seangoedecke.com/overtraining-as-the-path-to-human-like-ai/>

The anonymous blogger Gwern recently completed a thirteen thousand word post called Human-like Neural Nets by Catapulting , in which he offers a theory about why LLMs don't possess truly flexible human-like intelligence, and how we might train LLMs that do. Theories like this are entirely unremarkable: every crank researcher on the internet has a theory about how to crack AI. But Gwern is remarkable. Outside of OpenAI itself, Gwern is the earliest person to anticipate the potential of large language models, and the scaling arms-race involved in making them larger and more powerful still. I often cite Leopold Aschenbrenner's Situational Awareness as an example of someone correctly predicting the future of AI. Written in 2024, just after the release of GPT-4, Aschenbrenner gets a lot of things right: the rush to build billion or trillion-dollar GPU clusters, the importance of the code around the LLM (what he calls ?unhobbling?) 1 , and the fact that scaling would continue through the decade. Gwern's essay The Scaling Hypothesis anticipated the broad strokes in 2020 , immediately on the release of GPT-3 (two years before the release of ChatGPT and the beginning of the AI boom). And y...

### 5. Apple Books and Amazon Are Lousy With AI-Generated Books Ripping Off Legitimate Authors

Source: Daring Fireball | Published: 2026-07-18T00:33:15Z

Link: <https://thenewthings.com/p/apple-big-ai-book-slop-problem>

Joanna Stern at New Things, last month : Last month, just days after my book went on sale, AI knockoffs of the ebook version flooded Apple Books. There was Joanna Stern On I Am Not A Robot by Sophie Mercer. I AM NOT A ROBOT by Finn Tech. I AM NOT A ROBOT by Joana Stern ? with one ?n.? ( Watch our latest video showing all these titles and more.) In total, I found ten AI-generated ebooks clearly riding on mine, with AI-generated covers mimicking the style of my real one ? the same blue, yellow and red color palette. Most were priced at \$9.99, but some have gone as high as \$20.99. [...] After I contacted Apple about my own book's clones back in May, the knockoffs quickly disappeared. [...] But now, a month after that first Apple cleanup,

the problem is back. At the start of this week, there were at least three other I AM NOT A ROBOT counterfeits on Apple Books. (They seem to have since been removed.) And I'm not alone. Lena Dunham's Famesick has multiple lookalikes on the platform. Haley Sacks's Future Rich Person has copycats that even use AI generated images of women on the cover that resemble the real author. Kashmir Hill at The New York Times today (gift link): Recently, I receiv...

#### 6. Google Runs Out of Appeals, Must Pay Record \$4.7 Billion EU Antitrust Fine

Source: Daring Fireball | Published: 2026-07-17T23:47:16Z

Link: <https://www.cnbc.com/2026/07/02/alphabet-google-android-eu-antitrust-fine-4-1-billion-euro-appeal.html>

Arjun Kharpal, reporting for CNBC, back on July 2: Europe's top court on Thursday upheld Google's fine of around 4.1 billion euros (\$4.67 billion) over alleged anti-competitive practices. In 2018, the European Commission slapped Google with the record-breaking penalty on the grounds that it abused Android's mobile dominance to give unfair advantage to its own apps via pre-installation deals with smartphone makers. Google has been appealing the ruling through the EU court system. But the European Court of Justice (ECJ), Europe's top court, dismissed Google's appeal. Google has no further right to appeal. Google last year booked \$132 billion in profit ; this fine is about 3 percent of that. But in 2018, when the fine was initially assessed, Google booked just \$31 billion in profit - this fine, if they'd paid it then, would have been about 15 percent of their annual profit. (And they booked only \$13B, \$19B, \$16B, and \$14B in profit going back from 2017 to 2014.) There's never a reason not to string the appeal process out, but it's especially true when your profits are growing at an exceptional rate. By growing their profits around 5x they've reduced the relative pain of this fine...

#### 7. Roblox Set to Introduce AI Game-Building Feature, Including on iOS

Source: Daring Fireball | Published: 2026-07-17T21:20:04Z

Link: <https://about.roblox.com/newsroom/2026/07/build-without-limits-on-roblox>

Roblox executives Nick Tornow and Vlad Loktev, on the Roblox blog: Twenty years ago, Roblox launched with a simple idea: "You make the game." At the time, that was a radical proposition - most games were made by studios and professionals, and the idea that anyone could be a creator was far from obvious. But we believed it. And the millions of creators who built on Roblox proved it. As we look to a future where any one of Roblox's 132 million daily active users could come up with the next hit game, we're taking that original idea further than we ever have. Over the coming months, we'll share a series of announcements that will give every creator a clear runway to go further and fulfill the promise of "You make the game" for more people than ever before. Today, we're announcing Build, a new mobile-first creation tab within the Roblox app, and a new suite of AI-powered tools within Studio for creators of every level. On July 28, we'll begin testing these new agentic tools. With Build and Studio, creators can delegate the parts of development that don't require their full attention. This sounds really cool and fun. But you know what else was really cool and fun? AI coding apps that ra...

#### 8. Why has the display control panel pointer truncation bug gone unfixed for so long?

Source: The Old New Thing | Published: Fri, 17 Jul 2026 14:00:00 +0000

Here's the treemap for HCPCS codes. And here's the treemap for ICD-10 codes. The sizes of the squares are proportional to the number of [?] The post Visualizing Medical Code Hierarchy first appeared on John D. Cook .

## 10. Regular expressions for HCPCS codes

Source: John D. Cook | Published: Fri, 17 Jul 2026 14:02:52 +0000

Link: <https://www.johndcook.com/blog/2026/07/17/regular-expressions-for-hcpcs-codes/>

Since I revisited my old post on ICD code matching, I thought I'd revisit by post on HCPCS codes too. HCPCS stands for Healthcare Common Procedure Coding System, and is pronounced "hick picks". When most people say HCPCS, they technically mean HCPCS Level II, and that's what I mean here. The format of a HCPCS [?] The post Regular expressions for HCPCS codes first appeared on John D. Cook .

## 11. Regular expression speed and error rates

Source: John D. Cook | Published: Fri, 17 Jul 2026 11:26:19 +0000

Link: <https://www.johndcook.com/blog/2026/07/17/regex-speed-error/>

Seven years ago I wrote a post about regular expressions to match diagnosis codes. I wanted to revisit that post looking at speed and error rates. Regular expressions usually do not exactly match what you're looking for and nothing else. They have error false positives and false negatives. But they also have advantages, and context [?] The post Regular expression speed and error rates first appeared on John D. Cook .

## 12. Regressive JPEGs:

Source: Maurycy's Blog | Published: Fri, 17 Jul 2026 00:00:00 +0000

Link: [https://maurycyz.com/projects/bad\\_jpeg/](https://maurycyz.com/projects/bad_jpeg/)

One of the cool features of JPEG files is that there's the option to save low frequency components first. This means that a partially downloaded image will be displayed at low resolution instead of being cut off. In the file, this works by breaking up the compressed data into multiple "scans", each prefixed with a header. Here's the first scan of a representative image: FF DA - "start of scan" marker 00 0C - Big endian length field (12 bytes) Includes itself 03 - Number of channels in scan (3) 01 - Global id of first included channel 00 - Huffman table index #1 (DC: 0, AC: 0) 02 - Global id of second included channel 10 - Huffman table index #2 (DC: 1, AC: 0) 03 - Global id of third included channel 10 - Huffman table index #2 (DC: 0, AC: 0) 00 - Starting DCT bin (DC) 00 - Ending DCT bin (also DC) 01 - Precision: half, no pre-existing data. f8ad 512d d3f1 cd96 - Huffman coded DCT coefficients bcb0 58df 53d5 5d97 [...and a lot more] ... this one includes the lowest (DC) Fourier bin for all three color channels. The three color channels are YCbCr instead of the usual RGB. The luminance (Y) separated because it must be high quality, but the color can be fudged quite a bit while looking...

## 13. Plumbing Homebrew into the vulnerability ecosystem

Source: Andrew Nesbitt | Published: 2026-07-17T10:00:00+00:00

Link: <https://nesbitt.io/2026/07/17/plumbing-homebrew-into-the-vulnerability-ecosystem.html>

Back in January I released brew-vulns , a gem that added CVE scanning to Homebrew. It shelled out to brew info --json=v2 , derived a source repository URL and version tag for each installed formula, and queried osv.dev for anything known against that repo at that version. As of Homebrew 6.0.11 that command is built in and the gem is deprecated. Getting useful answers out of brew vulns in between meant changing what data Homebrew publishes about its own packages, registering Homebrew with the specs that vulnerability tooling is built on, standing up an advisory database, and porting Homebrew's version comparison to Python so osv.dev can order our releases. \$ brew vulns Checking 142 packages for vulnerabilities... (18 packages skipped - no supported source URL) openssl@3 (3.4.1) CVE-2024-13176 (medium) - Timing side-channel in ECDSA signature... Fixed in: 3.4.2 Found 1 vulnerability in 1 package 10 resolved by formula patches (not counted; pass --no-ignore-patches to include): glibc: CVE-2024-2961, CVE-2024-33599, CVE-2024-33600, CVE-2025-0395, ... About a month after the first release Mike McQuaid invited me to transfer the repo into the Homebrew org, and from then on it was being...

## 14. The Terminus

Source: Tedium: The Dull Side of the Internet. | Published: 2026-07-17T20:41:40Z

Link: <https://feed.tedium.co/link/15204/17382177/terminus-road-ending-history>

When a really long road ends, why don't we do more to celebrate the staggering amount of collective work that went into it? The ancient Romans really outclassed the federal highway system on this front.

#### 15. Podcast Notes: Iain McGilchrist on 'The Great Simplification'

Source: Jim Nielsen's Blog | Published: Thu, 16 Jul 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/podcast-notes-ian-mcgilchrist/>

I wish I could remember how this podcast came across my radar so I could give credit where it's due. But alas, I cannot. It's episode 217 with Dr. Iain McGilchrist. At one point, he shares his perspective about how science and reason can only take you so far: [science and reason] have their limitations. Most scientists and most philosophers are very well aware of that. Some people who are not terribly aware of [this] think that [science and reason] can answer all our questions. The fact that they can answer very many questions and be extraordinary servants doesn't make them the arbiters of everything that we know. Replace 'science and reason' there with 'AI' and you have a pretty good assessment. I like the word 'servant' there too. AI can be a good servant, but it's a terrible master. [AI] has no body, so it cannot suffer, it cannot love, it doesn't know that it's going to die, none of the things that humans deal with, so it is a very, very poor guide to how we should think [of consciousness] Ok, enough AI. Back to science and reason. There's a lot to be said for the scientific method, but not everything can be understood by analysis: What most people don't understand is that mo...

#### 16. The Life and Times of Maxis, Part 2: SimWorld

Source: The Digital Antiquarian | Published: Fri, 17 Jul 2026 15:59:19 +0000

Link: <https://www.filfre.net/2026/07/the-life-and-times-of-maxis-part-2-simworld/>

This article tells part of the story of Maxis Software. Maxis came into 1994 riding high on the wings of SimCity 2000, the hit of the previous holiday season. They followed up that success with SimHealth: The National Health Care Simulation. This may sound like satire, but it was all too real. To be clear, SimHealth was [?]

#### 17. Art Doesn't Scale

Source: matduggan.com | Published: Fri, 17 Jul 2026 10:34:04 GMT

Link: <https://matduggan.com/art-doesnt-scale/>

Listening to two acquaintances argue about if AI art is "art" is not a new experience for me, the now eternal debate between Doomer and Boomer. In this particular context, I'm listening to it as I wait for my surprisingly expensive iced latte in downtown Copenhagen.
