1. Seam Cutter
Source: Simon Willison’s Weblog | Published: 2026-10-25T15:10:19+00:00
Link: https://simonwillison.net/2026/Oct/25/seam-cutter/
Tool: Seam Cutter I built this weird and very specific cropping tool - it lets you create a horizontal or vertical cut across an image, then slide the two sides relative to each other. Effectively it lets you crop out a section in the middle of an image. I wanted this because I often use Tailor on my iPhone to stitch several screenshots together into lot long image, but sometimes I find myself wanting to crop out a section in the middle - to redact an irrelevant prompt from a transcript, for example. 2. Sunnny
Source: Daring Fireball | Published: 2026-10-25T21:50:00Z
Link: https://sunnny.com/
My thanks to Sunnny for sponsoring last week at DF. Sunnny?s pitch to B2B companies is simple: you store valuable customer information across a myriad of systems, making it hard to get a simple overview. Sunnny consolidates your customer data, cleans it, resolves identities, identifies relationships, and presents it neatly for you, your team, and your AI model. Early access is open now. ?

3. Duo Users Are Registering the Base of Their Index Finger as a Touch ID Coping Strategy
Source: Daring Fireball | Published: 2026-10-25T21:47:57Z
Link: https://www.reddit.com/r/iPhoneDuo/comments/1xehtcj/best_fingerprint_method/
Some guy on Reddit (with an illustration video): Saw this online, tried it, and it works beautifully. Basically, I registered the lowest part of my right index finger. That part of the finger sits naturally when you go to swipe up at the phone. This resolves a major issue I had where I couldn?t easily just look at my phone to glance through notifications on the lock screen. Now, it?s never been easier (shown at the end of the video). This is arguably better than Face ID. The speed is up there, and the phone doesn?t need to be facing directly at you to unlock, this motion can be done as soon as you pick up the phone. Tim Hardwick at MacRumors quotes the ?arguably better than Face ID? line. This idea is clever, and it does seem to work if you grip the Duo just right, but the idea that this is better than Face ID is a joke. Copium is a strong drug but it wears off quickly. ?

5. Gadget Review: LiberNovo Omni - the USB-C powered office chair ?????
Source: Terence Eden?s Blog | Published: Sun, 25 Oct 2026 12:34:01 +0000
Link: https://shkspr.mobi/blog/2026/10/gadget-review-libernovo-omni-chair/
Whenever a company asks me to review their gadgets, I always ask if it is USB-C powered. If not, I’m not interested. So, welcome to the future where your chair is USC-C rechargeable! WHAT?! The LiberNovo Omni looks like a standard office chair - but has two secret features. First, is that it is exceedingly comfortable. Full foam cushions, lovely headrest, and a recline which almost gets you?

6. Poles and polars

The previous two posts have been about polar triangles. The first used a polar triangle to derive a theorem, and the second showed how to compute polars using linear algebra. But what exactly is a polar triangle and why is it called that? Poles and polars on a sphere Let?s start with a sphere S and a [?] The post Poles and polars first appeared on John D. Cook .

8. Why My Dad Didn?t Have a Cell Phone
Source: Jim Nielsen?s Blog | Published: Sun, 25 Oct 2026 19:00:00 GMT
Link: https://blog.jim-nielsen.com/2026/why-dad-didnt-have-cellphone/
Here?s Dave Rupert writing about all those emails, texts, phone calls, etc. we?re getting these days: Once upon a time it had utility, now it?s all noise and grifter slop demanding our attention and giving us to-dos That last part really hit: ?giving us to-dos?. I feel this. So many of the messenger apps on my phone are other people laying claim to my time and attention. It reminds me of an interaction I had with my Dad years ago. This was back when cell phones were starting to become ubiquitous. Not smartphones , mind you. Cell phones, i.e. telephones that were mobile. Texting wasn?t really a thing yet. These were devices for making voice calls wherever you went. As a teen, it seemed like everyone had one: my teachers, my friends, even my friends? parents. But not my parents. They were ?behind the times?. (Everyone was getting cell phones and we didn?t even have caller ID on our landline!) One night at family dinner I asked, ?Dad, why don?t you have a cell phone?? His response? ?Why would I want to allow other people to contact me whenever they want?? I still think about that. Reply via: Email • Mastodon • Bluesky

Someone stated in the early days of the war, a feeling that was reciprocated by the soldier in khaki and the sailor in blue, that a mechanical device would be the determining factor in ending the world conflict, favorably, of course, for the United States and her allies. 1 One of my common topics is the history of nuclear weapons . The "atom bomb" is a rich vein of history because its impact has been as much cultural as technical. Dramatic depictions like Christopher Nolan's Oppenheimer have recently enforced, perhaps even revived, the perception of nuclear weapons as an innovation that forever changed warfare. More quietly, historians and strategists tend to wonder if that is still true today, or if it was ever as true as was supposed?the conventional firebombing of Tokyo probably claimed as many victims as the nuclear attacks on Hiroshima and Nagasaki, for example. Besides, it's not unusual to hear people overstate the significance of nuclear weapons to WWII in a way that is obvious with a brief inspection of the timeline. The technology became available only very late in the war, and for that reason if no other, it must have had less of an impact on the outcome than other revol...
