

1. Quoting New York Times Editors? Note

Source: Simon Willison's Weblog | Published: 2026-05-10T23:58:49+00:00

Link: <https://simonwillison.net/2026/May/10/new-york-times-editors-note/#atom-everything>

This article was updated after The Times learned that a remark attributed to Pierre Poilievre, the Conservative leader, was in fact an A.I.-generated summary of his views about Canadian politics that A.I. rendered as a quotation. The reporter should have checked the accuracy of what the A.I. tool returned. The article now accurately quotes from a speech delivered by Mr. Poilievre in April. [...] He did not refer to politicians who changed allegiances as turncoats in that speech. ? New York Times Editors? 2. Quoting Andrew Quinn

Source: Simon Willison's Weblog | Published: 2026-05-10T14:59:17+00:00

Link: <https://simonwillison.net/2026/May/10/andrew-quinn/#atom-everything>

One could say in the first quarter-century of my life, that while I was always fascinated by programming, I could never overcome the guilt of not really knowing whether the tool I am building right now isn't already superceded by some much better implementation someone else has already written 30 or 40 years ago; I could write a TSV-aware search and replace, or I could find out about awk and solve that entire class of problems in one fell swoop, for example. My central conceit is that this is a trap . You need to reinvent a couple of wheels to get to the edge of what we know about wheel-making, not a thousand wheels, and not zero; probably four or five is sufficient in most domains, maybe closer to twenty or thirty in the most epistemically rigorous and developed fields like mathematics or computer science. Each wheel you reinvent, and every directed question you ask along the way, will propel you faster to the true frontier than that same amount of time spend in idle study, or even five times that amount. ? 3. Redis Array Playground

Source: Simon Willison's Weblog | Published: 2026-05-04T15:53:57+00:00

Link: <https://simonwillison.net/2026/May/4/redis-array/#atom-everything>

Tool: Redis Array Playground Salvatore Sanfilippo submitted a PR adding a new data type - arrays - to Redis. The new commands are ARCOUNT , ARDEL , ARDELRange , ARGET , ARGETRange , ARGREP , ARINFO , ARINSERT , ARLASTITEMS , ARLEN , ARMGET , ARMSET , ARNEXT , AROP , ARRANGE , ARSCAN , ARSEEK , ARSET . The implementation is currently available in a branch, so I had Claude Code for web build this interactive playground for trying out the new commands in a WASM-compiled build of a subset of Redis running in the browser. The most interesting new command is ARGREP which can run a server-side grep against a range of values in the array using the newly vendored TRE regex library . Salvatore wrote more about the AI-assisted development process for the array type in Redis array type: short story of a long development . 4. The left-wing case for AI

Source: seangoedecke.com RSS feed | Published: Sun, 10 May 2026 00:00:00 GMT

Link: <https://seangoedecke.com/the-left-wing-case-for-ai/>

In Many anti-AI arguments are conservative arguments I argued that left-wing anti-AI sentiment 1 is partly a backlash to two unrelated events around the rise of ChatGPT: the crypto mania of 2022 and the pro-Donald-Trump push many big tech CEOs made in 2024. If the timing had been different, we could have had a real pro-AI faction on the left. What would that look like? I'm not going to respond to any of the popular anti-AI arguments (I've already done that here). I think it's more interesting to outline some explicitly left-wing pro-AI arguments. Disability

The left wing has (correctly) taken a broad view on what can be an acceptable disability aid. When criticizing potentially-exploitative companies - for instance, food delivery apps like DoorDash - they often stop to acknowledge that some people have few alternatives to those services, and that they have meaningfully improved the lives of the disabled or chronically ill. I think it's obvious that LLMs are a powerful disability aid. Like any technology that makes it easier to interact with a computer, they're useful to people who are trying to overcome all kinds of barriers. Almost every video online is now automatically captioned...

5. WorkOS

Source: Daring Fireball | Published: 2026-05-10T14:05:00Z

Link: https://workos.com/?utm_source=daringfireball&utm_medium=newsletter&utm_campaign=q22026

My thanks for WorkOS for, once again, sponsoring Daring Fireball for the last week. If you're ready to sell to enterprise customers, your product may be ready ? but is your auth infrastructure? If you're building B2B SaaS, especially AI, you quickly need enterprise features like SSO, SCIM, and audit logs. Your developers shouldn't waste cycles rebuilding that infrastructure. Free them to focus on what sets you apart. WorkOS gives you production-ready APIs for auth and access control that integrate directly into your product. Trusted by over 2,000 companies, including OpenAI, Anthropic, Cursor, and Vercel. Build faster with WorkOS . ?

6. Meta to Start Capturing Employee Mouse Movements, Keystrokes for AI Training Data

Source: Daring Fireball | Published: 2026-05-10T14:04:19Z

Link: <https://www.reuters.com/sustainability/boards-policy-regulation/meta-start-capturing-employee-mouse-movements-keystrokes-ai-training-data-2026-04-21/>

Katie Paul and Jeff Horwitz, reporting for Reuters in late April: Meta is installing new tracking software on U.S.-based employees' computers to capture mouse movements, clicks and ?keystrokes for use in training its artificial intelligence models, part of a broad initiative to build AI agents that can perform work tasks autonomously, the company told staffers in internal memos seen by Reuters. The tool, called Model Capability Initiative (MCI), will run on work-related apps and websites and will also take occasional snapshots of the content on employees' screens, according to one of the memos, posted by a staff AI research scientist on Tuesday in a channel for the company's model-building Meta SuperIntelligence Labs team. I love this. Anyone who works at Meta knows who they're working for. I hope they're all as creeped out by this as I would be. What I'd really like to know is how far up the chain does this go? If they have any honor, every single employee at the company, right up to Zuckerberg, would get this MCI spyware. What's good for the goose is good for the gander. I presume that's not the case, and there's a two-class system where if you're high enough in the org chart, y...

7. Photoshop's ?Modern User Interface? Sucks (and Doesn't Feel Modern)

Source: Daring Fireball | Published: 2026-05-04T19:13:06Z

Link: <https://unsung.aresluna.org/photoshops-challenges-with-focus-pt-2/>

Marcin Wichary at Unsung: I'm angry. (Clearly.) We should all be angry in face of stuff like this. This is how people get fed up with software ? because it feels unstable and deteriorates on its own without needing to . I know I brought up that an existing power user base can be a huge pain in the ass, and I am a decades-old Photoshop power user. But this is different than other examples where the product needs or at least wants to evolve past its core audience or toward a different market. For Photoshop here, nothing I see indicates any change in course or clientele ? and yet all of these good moments in UI that used to help me out no longer exist. Plus, all those transgressions are solved problems. Those issues are not buried in pages of heavily litigated patents, or in seven collective brains of world-class interface designers whose driveways are presently occupied by cash-filled trucks sent over by frontier companies. This isn't some long lost art that requires archaeologists to decipher. This feels like carelessness and laziness in face of basic UI engineering; in a likely internally-motivated effort to refresh the interface, the team threw an entire nursery worth of babies w...

8. The linear algebra of bit twiddling

Source: John D. Cook | Published: Sun, 10 May 2026 18:51:40 +0000

Link: <https://www.johndcook.com/blog/2026/05/10/the-linear-algebra-of-bit-twiddling/>

The previous post looked at the tempering step of the Mersenne Twister, formulating a sequence of bit operations as multiplication by a matrix mod 2. This post will look at the components more closely. The theorems of linear algebra generally hold independent of the field of scalars. Typically the field is $\mathbb{F}_2$ or $\mathbb{F}_3$, but $\mathbb{F}_2$ The post The linear algebra of bit twiddling first appeared on John D. Cook .

9. Reverse engineering Mersenne Twister with Linear Algebra

Source: John D. Cook | Published: Sun, 10 May 2026 17:32:02 +0000

Link: <https://www.johndcook.com/blog/2026/05/10/reverse-mersenne-twister/>

The Mersenne Twister (MT) is a random number generator with good statistical properties but bad cryptographic properties. In buzzwords, it's a PRNG but not a CSPRNG. This post will show how the internal state of a MT generator can be recovered from its output. We'll do this using linear algebra. The bit twiddling approach is $\mathbb{F}_2$ The post Reverse engineering Mersenne Twister with Linear Algebra first appeared on John D. Cook .

10. Madame Semver Will See You Now

Source: Andrew Nesbitt | Published: 2026-05-10T10:00:00+00:00

Link: <https://nesbitt.io/2026/05/10/madame-semver-will-see-you-now.html>

The tent is at the back of the fairground, past the fudge stall. The velvet over the entrance is the exact red of a failed CI badge. Madame Semver is already shuffling when you sit. She does not ask your question. She turns the first card and it says $\wedge 1.0.0$, just that, black ink on cream. $\wedge$ The caret. It permits everything that comes after, and you put it there yourself, which is the part people forget. $\wedge$ She sets it down. $\wedge$ You came here to ask if you should archive the repository. You will not. We both know you will not. So let me tell you what happens instead. $\wedge$ $\wedge$ She turns three cards in a row and barely glances at them. $\wedge$ In June you receive a pull request. It is polite. It has tests. The tests pass. The code is wrong in a way that costs you most of a Saturday, and at the bottom of the description there is a co-author you cannot find a photograph of. You will merge two more from him before you learn to check. $\wedge$ $\wedge$ In August a stranger opens an issue explaining what your library does. He is mistaken but very sure, and cites a source you cannot argue with. The next week somebody else publishes the package he was describing, under a name one letter from yours, and by September it has t...

11. [RSS Club] A Sneak Preview of Upcoming Posts

Psssst! This top secret post is only available to RSS subscribers! As a little thank-you for being a member of RSS Club I thought I'd show you some trailers for upcoming blog posts. I use the brilliant Editorial Calendar Plugin to organise all my scheduled blog posts. Here's what you can expect over the next month: I tend to write in bursts - rather than once per day - and then spread the?

12. Welcoming the Costa Rican Government to Have I Been Pwned

Source: Troy Hunt | Published: Mon, 11 May 2026 00:24:17 GMT

Link: <https://www.troyhunt.com/welcoming-the-costa-rican-government-to-have-i-been-pwned/>

Today, we welcome the 42nd government onboarded to Have I Been Pwned's free gov service: Costa Rica. The CSIRT of the Government of Costa Rica now has access to monitor government domains against the data in HIBP. This enables their national cybersecurity incident response team to identify exposure

13. Weekly Update 503

Source: Troy Hunt | Published: Sun, 10 May 2026 23:52:52 GMT

Link: <https://www.troyhunt.com/weekly-update-503/>

Well, it's the day before the Instructure "pay or leak" deadline (at least by my Aussie watch),

and the company remains removed from the ShinyHunters website. In its place sits a press statement that amounts to "we're not making any statements". So

14. History of PowerDNS: 2003-2013

Source: Bert Hubert's writings | Published: Sun, 29 Nov 2020 16:24:11 +0100

Link: <https://berthub.eu/articles/posts/history-of-powerdns-2003-2013/>

This is part two of the PowerDNS history as I recall it. As noted in part one, some of this stuff is rather old, and it is entirely possible I am misremembering things. Please do let me know if you find any important omissions or mistakes! At the end of 2002, beginning of 2003, PowerDNS as a going concern was gone. There were no more employees, there were no paying customers.

15. Mijn nieuwe part-time baan

Source: Bert Hubert's writings | Published: Fri, 27 Nov 2020 13:00:22 +0100

Link: <https://berthub.eu/articles/posts/mijn-nieuwe-part-time-baan/>

Dit is waarschijnlijk de laatste keer dat ik zal bloggen over mijn nieuwe (part-time) baan. Met ingang van 1 december ben ik ØØn van de drie leden van de commissie die lasten voor de Nederlandse inlichtingen- en veiligheidsdiensten toetst, de Toetsingscommissie Inzet Bevoegdheden (TIB). Als een van de civiele of militaire inlichtingen- en veiligheidsdiensten van Nederland gebruik wil maken van hun bevoegdheden tot aftappen, afluisteren, SIGINT- of hacking moeten ze eerst hun eigen juristen overtuigen, dan hun ministerie en tenslotte de TIB.

16. My New Part Time Job

Source: Bert Hubert's writings | Published: Fri, 27 Nov 2020 12:55:54 +0100

Link: <https://berthub.eu/articles/posts/my-new-part-time-job/>

So this is likely the last time you see me blog about my new (part time) job. Update: I have left this post in September 2022 (Nederlandse versie hier). Starting December 1st, I am one of the three members of the board that checks warrants for the Dutch intelligence and security services. This board is called ?Toetsingscommissie Inzet Bevoegdheden? or TIB. If either of the civil or the military intelligence and security services of The Netherlands want to use their lawful intercept, SIGINT or hacking (& some other) legal powers, they have to first convince their own jurists, then their ministry and finally the TIB.
