Release: datasette-auth-github 1.0 I run this GitHub login plugin on the agent.datasette.io demo site and I noticed that my authenticated sessions weren't lasting very long. It turned out that the plugin was setting cookies without a Max-Age parameter, so they were expiring at the end of a browser session (which in Mobile Safari seems to happen pretty often, independently of how you are using the app.) I fixed that in #80 and, since this plugin has been around for quite a while and is tested against both Datasette 0.65.x and Datasette 1.0ax, I decided to bump it up to a 1.0 release. I'm trying to get better at promoting stable plugins to 1.0. Tags: github , plugins , datasette

2. California Sea Lion, Brandt's Cormorant

Source: Simon Willison's Weblog | Published: 2026-09-19T17:10:08+00:00

Link: <https://simonwillison.net/2026/Sep/19/sighting-401567341/>

California Sea Lion, Brandt's Cormorant, in Pillar Point Harbor, CA, US I only noticed this after I had taken the photo: Morris the Northern Gannet is peeking out from behind the base of the sign. Tags: wildlife

3. The Creative Spirit of Who Framed Roger Rabbit

Source: Simon Willison's Weblog | Published: 2026-09-18T14:36:41+00:00

The Creative Spirit of Who Framed Roger Rabbit I love Who Framed Roger Rabbit , the 1988 movie by Robert Zemeckis. I haven't watched it in quite a few years, and Cypress Frankenfeld just pointed out this sequence from early in the movie: It's a pelican riding a bicycle! Look closely and you'll note that the pelican is animated while the bicycle is a real bicycle. Apparently they filled the wheels with water to add stability, then set it running and guided it with a cable. Cypress gathered more details on the scene. What a delight. 4. Tyler Stalman's iPhone 18 Pro Camera Review

Source: Daring Fireball | Published: 2026-09-19T16:29:00Z

Link: <https://www.youtube.com/watch?v=m6cDErtCKAc>

Splendid video. Love that Stalman shot photos side-by-side with a film SLR using Kodak Portra 400, for comparison to Apple's new film-look Photographic Styles. ?

5. Austin Mann's iPhone 18 Pro Camera Review, From Dunton, Colorado

Source: Daring Fireball | Published: 2026-09-19T15:37:39Z

Link: <https://www.austinmann.com/trek/iphone-18-pro-camera-review-dunton>

Austin Mann: I'm here at the beautiful Dunton River Camp in southwest Colorado, where I've spent the last week testing the new camera and features on the iPhone 18 Pro. Beyond the variable aperture and Pro Controls, Apple also built in a bunch of other new features like Photographic Styles 3 with film texture and grain control, 4K Time-lapse and Focus Tracking. As always, when I start a field test I'm asking one question: How will this new tech make our pictures and videos better? Outstanding example photos, a terrific video that illustrates how some of the new ?pro controls? in the Camera app work, and some terrific examples of Photographic Styles 3. (I love how Mann takes these new phones to exotic locales around the globe each year, and I take them to the hardware store .) ?

6. Warren Buffett, at 96, Steps Down as Chairman at Berkshire Hathaway

Source: Daring Fireball | Published: 2026-09-18T19:29:12Z

Link: <https://www.berkshirehathaway.com/news/sep1826.pdf>

Warren Buffett, in a letter to Berkshire shareholders: Recently, I celebrated my 96th birthday with family and friends, including one of my great-grandchildren, who had just turned one. He's moving a bit faster than I am these days. [...] So the timing is right to complete the transition. I will become Chairman Emeritus and remain a Director. My son, Howard, will succeed me as Chairman. Howard has been a Berkshire Director for 33 years. That is a longer apprenticeship than I served before taking the reins at the age of 34. Greg runs the company; Howard will guard its culture and values — both worth more than anything on our balance sheet. Think of Howard as a policy the shareholders own and hope never to claim against. Not many 71-year-olds rise to the position of chairman at leading corporations. ?

7. Grit your teeth and ship it

Source: seangoedecke.com RSS feed | Published: Sun, 20 Sep 2026 00:00:00 GMT

Link: <https://seangoedecke.com/grit-your-teeth-and-ship-it/>

Being good at building and being good at shipping are two separate skills. In the short term, they're actually countervailing: if you have a gift for building, you're likely to be worse at shipping. Ira Glass has a classic quote about this. All of us who do creative work, we get into it because we have good taste. But there is this gap. For the first couple years you make stuff, it's just not that good. It's trying to be good, it has potential, but it's not. But your taste, the thing that got you into the game, is still killer. And your taste is why your work disappoints you. The only way around this is to grit your teeth and ship it . You have to force yourself to publish things you've made even when you think they're crap. Programming Gifted programmers have a nearly pathological desire to build elegant, correct, neat systems. That's what motivates them to learn the arcane details of their languages, or to spend time polishing and refactoring over and over again. But it's also what makes them reluctant to ship. Any flaws in the software bother them on an emotional level. If they ship with those flaws, they feel like people will think they weren't paying enough attention to notic...

8. Finding Bugs

Source: matklad | Published: 2026-09-19T00:00:00+00:00

Link: <https://matklad.github.io/2026/09/19/finding-bugs.html>

Are generative (randomized) tests significantly more effective than example-based unit-tests at discovering bugs? There's an interesting discussion about this on lobste.rs. One argument in favor of unit tests is, paraphrasing

9. This Week in Package Management: 19 September 2026

Source: Andrew Nesbitt | Published: 2026-09-19T10:00:00+00:00

Link: <https://nesbitt.io/2026/09/19/this-week-in-package-management.html>

Week eighteen of the roundup, built from the package manager OPML feed collection and whatever I've posted or boosted on Mastodon . I added nineteen feeds to the OPML this week, mostly project blogs, plus GNU Guix, Zig and the Reproducible Builds monthly reports. Releases Homebrew 7.0.0 overlaps package preparation with downloads for faster installs, sandboxes formula and cask operations (home-directory reads are blocked by default), and adds brew vulns , backed by a new CC0-licensed OSV-format advisory database. It also ships BrewUI, a native macOS app for browsing and installing packages, drops macOS 10.15 support, and moves Intel Macs to Tier 3. Patch releases through 7.0.4 fix Perl bottle relocation under the shorter prefix and restrict which files are verified when tapping. Swift 6.4 makes Swift Build the default build system in SwiftPM and adds SBOM generation in SPDX and CycloneDX formats via SE-0509 . pnpm 12.5 extends the Python support added in 12.4: each workspace project selects its own interpreter against requires-python (downloaded from python-build-standalone if missing), projects with a [build-system] install as editable, and a shared-environment setting resolves m...

AirBnB's housing accelerator, rising steel prices, a resurgence of US coal power, low-head dams, and more.

11. Notes on discrete-time Fourier series and transform

Source: Eli Bendersky's website | Published: 2026-09-19T09:39:00-07:00

Link: <https://eli.thegreenplace.net/2026/notes-on-discrete-time-fourier-series-and-transform/>

The following are my notes on discrete-time Fourier series (DTFS), as well as the discrete-time Fourier transform (DTFT). These topics serve as an important theoretical underpinning to the digital processing of signals by computers using the DFT (which will be covered in a future post). For discrete-time signals, we use ?
