

### 1. System One models like Jev can train their own replacements

Source: seangoedecke.com RSS feed | Published: Sun, 20 Sep 2026 00:00:00 GMT

Link: <https://seangoedecke.com/system-one-models-can-train-their-own-replacements/>

?System One? models like Jev are fast general classifiers. Classifiers have existed since 1958, but they have to be trained for specific tasks: if you build a classifier to identify images of dogs, it can't be used to tell you if a streetlight is red, or if a letter is urgent. Like a LLM, Jev can be prompted for a wide variety of tasks, from sorting email to playing Doom. I think models like this are going to be important. There are many tasks that a LLM could do in theory but are too slow and expensive in practice (for instance, reading each new message in Slack 1 and deciding whether to notify you or not). While you could train a specific classifier for these tasks, there are two main problems with that: Despite being a well-understood ML problem, training a bespoke classifier is outside of the skillset of most ordinary engineering teams Training a classifier requires assembling a large dataset Jev obviously solves the first problem. Any engineering team can plug in a System One model with a prompt like ?Based on {list of criteria}, should the user be notified about this message?? But I think it solves the second problem too. For serious work, a specific hand-built classifier...

### 2. Quoting voxium

It has been half a month since I started a new role at a big company. Nobody knows anything here. The specs, code, tests, PRDs, tickets, resolution of those tickets, reports, etc., everything is made by Claude Code. Nobody on my team likes this. They are being forced to ship as much as they can. I have heard multiple times from higher management that pushing code is not a bottleneck, so why are we slow? People are working 12 to 13 hours a day just to press enter. Nobody is reading anything. Everyone, literally everyone, from an L1 to an L7 engineer here is doing the same thing. Talk to Claude. ? voxium Tags: ai-misuse , llms , ai , generative-ai

### 3. llm-keys-ui 0.1

Source: Simon Willison's Weblog | Published: 2026-09-20T19:22:19+00:00

Link: <https://simonwillison.net/2026/Sep/20/llm-keys-ui/>

Release: llm-keys-ui 0.1 This plugin solves a very specific problem. I've started using Codex Remote to run coding agents on various machines while controlling them from my phone. Sometimes I use those machines to hack on LLM projects, and occasionally that means I need to configure an API key. I don't like pasting API keys into agent sessions, so I wanted a way to get those keys onto a machine without pasting them into the ChatGPT app directly. With this plugin, I can tell Codex to run: `uvx --with llm-keys-ui llm keys-ui --all` Then have it tell me the URL - including local network or Tailscale device IPs - for an interface to save additional API keys. Then later it can use a command like `llm keys get anthropic` as part of a shell command when it needs to use a key. Tags: llm , coding-agents , codex

### 4. datasette-explain 0.2.2

Source: Simon Willison's Weblog | Published: 2026-09-20T00:22:04+00:00

Link: <https://simonwillison.net/2026/Sep/20/datasette-explain/>

Release: datasette-explain 0.2.2 Explain plans now work on read-only stored-query pages. I upgraded datasette.simonwillison.net to Datasette 1.0a40, which inspired me to ship a new version of this explain plugin. Tags: sqlite , datasette

### 5. Apple TV to Finally Air ?The Savant? in Early 2027, Supposedly

Source: Daring Fireball | Published: 2026-09-21T00:49:55Z

Link:

<https://deadline.com/2026/09/jessica-chastain-the-savant-new-release-date-apple-tv-1237108228/>  
Nellie Andreeva, reporting for Deadline: The release of The Savant is back on. A year after Apple TV put the thriller starring Jessica Chastain on hold three days before it was slated to premiere on Sept. 26, 2025, the streamer has rescheduled it for spring, 2027. The exact timing, which is still being finalized, will make the series eligible for the 2027 Emmys, I hear. As Deadline reported at the time of the postponement, The Savant 's last-minute benching was due to its storyline about preventing extremist attacks and some imagery, including sniper attacks, that were considered potentially triggering two weeks after the assassination of right-wing political activist Charlie Kirk. The only people who were potentially 'triggered' by this would be whoever answers the phone in Cupertino when the White House calls. Variety and Dark Horizons both echo Deadline's reporting that Apple TV is finally going to air The Savant early next year, but Apple TV's own press page still lists it as 'Premiere Date: Coming Soon'. ?

6. Yours Truly on CNBC's 'Squawk on the Street' Friday

I genuinely enjoyed that Sara Eisen laughed a little when introducing me as having written a 5,000-word review of the iPhone 18 Pro. ?

7. WorkOS: How SSO Works and the Fastest Way to Add It  
Source: Daring Fireball | Published: 2026-09-20T17:35:31Z  
Link: [https://workos.com/guide/the-developers-guide-to-sso?utm\\_source=daringfireball&utm\\_medium=newsletter&utm\\_campaign=q32026](https://workos.com/guide/the-developers-guide-to-sso?utm_source=daringfireball&utm_medium=newsletter&utm_campaign=q32026)

My thanks to WorkOS for sponsoring this last week ' a big week ' at DF. SSO is table stakes for enterprise deals, but building it into your app yourself means writing SAML controllers, parsing XML assertions, and handling IdP-specific quirks for each provider. Learn how SAML flows work, the tradeoffs between building or buying, and best practices for security, routing, and UX. Or, skip the hassle and add SSO with WorkOS . Read their developer's guide to learn more . ?

9. Book Review: How to Build a Space Station by Jonathan Morrison ?????  
Source: Terence Eden's Blog | Published: Sun, 20 Sep 2026 11:34:30 +0000  
Link: <https://shkspr.mobi/blog/2026/09/book-review-how-to-build-a-space-station-by-jonathan-morrison/>  
This book, by The Times' former Architecture Correspondent, stands in direct opposition to A City on Mars. Whereas that book presented a (perhaps too) sceptical look at the realities of living on other planets, Jonathan Morrison's book goes (perhaps too far) in the opposite direction. How to Build a Space Station is a beautiful examination of just how important architecture will be to our?

10. The iPhone Model Hall of Fame  
Source: Jim Nielsen's Blog | Published: Sun, 20 Sep 2026 19:00:00 GMT  
Link: <https://blog.jim-nielsen.com/2026/iphone-hall-of-fame/>  
John Gruber makes his picks for the iPhone Hall of Fame: iPhone (original) iPhone 4 iPhone 5S iPhone X iPhone 17 Pro Ok, my turn. Here's my iPhone Hall of Fame: iPhone (original) iPhone 4 iPhone X iPhone 12 Mini iPod Touch Notes: How do you not put the OG iPhone at the top spot? It's like doing a Mount Rushmore and not putting the first president first. It's gotta be George. Aesthetically, the 4 was the best. Just an absolute beauty to behold (and use, so long as you held it right ). Aesthetically, the X was a close second to the 4. But in terms of form, X was best. (Shout out to the 3GS, that curved back felt great in the palm.) The Minis (12/13)

stand as proof that commercial success doesn't always equate with greatness. Ahead of their time, those ones. Oh, and you're probably wondering: "The Touch? That's not even an iPhone!" I disagree. The Touch was The iPhone For The Rest of Us?. When you couldn't get one of those early iPhones (because of price, because of geographic location, because of \_\_\_\_ ) the Touch was your gateway drug. For me, it was price. I was a poor kid in college in 2007, and the iPhone was \$\$ (and it was on AT&T, which was even more \$\$). Eventually, I was able t...

#### 11. a new world airport and its baggage

Source: computers are bad | Published: 20 Sep 2026 00:00:00 UT

Link: <https://computer.rip/2026-09-20-denver-baggage.html>

Aviation came to Denver mainly in the form of mail. Like much of the inland West, the first airfields served a smattering of passenger flights (both expensive and uncomfortable in the 1930s) and a regular schedule of contract mail carriers. Postal Service air mail contracts built many of the nation's major airlines—and its major airports. One of Denver's simple airstrips, Denver Municipal Airport, transformed from a mail stop to a busy airport when Continental Airlines moved its headquarters to Denver 1937, and then again when a modern passenger terminal was completed in 1946. Along the way, it had been renamed for the mayor who oversaw much of its development: Stapleton. The Second World War, and then the post-war return, brought both a boom in aviation generally and in Denver specifically. The city's population grew by almost 10,000 a year from 1940 to 1960. During the '60s, Stapleton gained an additional runway and a new terminal as the schedule grew from under forty departures a day to over one hundred. When airline deregulation prompted a total restructuring of the industry, both by consolidation and widespread adoption of a "hub and spoke" model, Denver's central location ma...
