

1. Prolost Watches 1.0

Source: Daring Fireball | Published: 2026-05-07T21:27:27Z

Link: <https://prolost.com/blog/prolostwatches>

Stu Maschwitz: Prolost Watches is an iPhone app for managing your watch collection. It's part database, part journal; designed for the detail-obsessed mind of the watch fanatic. As you log each day's choice of watch, insights are revealed. Wear logs trace a path on the map. Events from the past are resurfaced at opportune times. Finances manage themselves as you buy and sell. Your entire collection lives in your pocket, and you get to enjoy all your watches, even the ones you're not wearing. [...] Prolost Watches is a one-time purchase. There's no subscription, no ads, no account, and no server. Your data is secure and private, and never leaves your device. Pre-order now for US\$14.99, with expected release on June 16 at US\$19.99. I'm friends with Stu, I have my own little obsessively curated watch collection, and, for some of my interests in life, I love keeping a log of activity. So I jumped at the chance to beta test Prolost Watches. And it turns out, my watches are not one of those things I want to track in a log or database. I just want to continue doing what I've been doing ever since I went from owning only one watch to two: I pick the one I'm in the mood for that morning and...

2. The Greatest Match Cut in Cinematic History, Improved by Amazon Prime

Source: Daring Fireball | Published: 2026-05-07T15:21:34Z

Link: <https://bsky.app/profile/gethill.bsky.social/post/3ml6fyfv7kc2l>

I'm sure there's a scene marker right at the cut, so that's why an ad got inserted there. But, my god. Someone at Amazon should go to prison for this. (I think it's a total coincidence that the Febreze ad seems roughly color-matched to the sky. But scroll down in the Bluesky thread for some links to the absolute genius campaign from Cerveza Cristal beer, with spots specifically designed to integrate into Star Wars when it was broadcast on commercial TV in Chile. ? Your father wanted you to have this when you were old enough ? might be the funniest TV commercial ever made.) Update: Here's Todd Vaziri's 2026 HD remaster of the original jump cut , for your comparison. Enjoy. ?

3. ? Software as the Product of Obsession Times Voice

Source: Daring Fireball | Published: 2026-05-05T21:01:05Z

Link: https://daringfireball.net/2026/05/software_as_the_product_of_obsession_times_voice

You might think it counterintuitive that a movement obsessed with software would be spearheading a severe decline in the design quality of software, but in Patel's definition, there's no concept of software as art, as a practice, as a craft. Software brain is purely an obsession with software as a medium in and of itself. A means with no consideration for the end.

4. Llm-gemini 0.31

Source: Simon Willison's Weblog | Published: 2026-05-07T19:57:06+00:00

Link: <https://simonwillison.net/2026/May/7/llm-gemini/#atom-everything>

Release: Llm-gemini 0.31 gemini-3.1-flash-lite is no longer a preview . Here's my write-up of the Gemini 3.1 Flash-Lite Preview model back in March. I don't believe this new non-preview model has changed since then. Tags: llm-release , gemini , llm , google , generative-ai , ai , llms

5. Big Words

Double click or double tap the page to access a form for modifying the different options. Tags: vibe-coding , tools

6. Behind the Scenes Hardening Firefox with Claude Mythos Preview

Source: Simon Willison's Weblog | Published: 2026-05-07T17:56:25+00:00

Link: <https://simonwillison.net/2026/May/7/firefox-claude-mythos/#atom-everything>

Behind the Scenes Hardening Firefox with Claude Mythos Preview Fascinating, in-depth details on how Mozilla used their access to the Claude Mythos preview to locate and then fix hundreds of vulnerabilities in Firefox: Suddenly, the bugs are very good Just a few months ago, AI-generated security bug reports to open source projects were mostly known for being unwanted slop. Dealing with reports that look plausibly correct but are wrong imposes an asymmetric cost on project maintainers: it's cheap and easy to prompt an LLM to find a ?problem? in code, but slow and expensive to respond to it. It is difficult to overstate how much this dynamic changed for us over a few short months. This was due to a combination of two main factors. First, the models got a lot more capable. Second, we dramatically improved our techniques for harnessing these models ? steering them, scaling them, and stacking them to generate large amounts of signal and filter out the noise. They include some detailed bug descriptions too, including a 20-year old XSLT bug and a 15-year-old bug in the element. A lot of the attempts made by the harness were blocked by Firefox's existing defense-in-depth measures, which is...

7. Why hasn't longer-horizon training slowed AI progress?

Source: seangoedecke.com RSS feed | Published: Thu, 07 May 2026 00:00:00 GMT

Link: <https://seangoedecke.com/why-hasnt-longer-horizon-training-slowed-ai-progress/>

Dwarkesh Patel 1 recently posted an award for the best answers to four key questions about AI. It's partly a challenge and partly a job interview, since some of the winners will get offered a role as a ?research collaborator?. I don't want the job, but I do want to write down my answer to his first question: why hasn't AI progress slowed down more? There are a few reasons we might think AI progress would slow down. The particular reason Dwarkesh is interested in goes like this. Training a model (specifically reinforcement learning) requires the model to perform a task and then get ?graded? on the output. As models get more powerful and tasks become harder, they take longer and require more FLOPs 2 to complete, and thus more FLOPs to train: thus training harder models will take longer. But intuitively, AI progress hasn't slowed down that much. The famous METR horizon-length graph shows that AI systems are capable of more and more complex tasks over time, and that this process is accelerating, not slowing down. Why would that be? What's in a FLOP? Firstly, it might just be the case that newer models are benefiting from orders of magnitude more FLOPs . Of course, AI labs aren't stand...

8. When you upgrade your resource strings to Unicode, don't forget to specify the L prefix

Source: The Old New Thing | Published: Thu, 07 May 2026 14:00:00 +0000

The previous post constructed a triangular analog of the squircle, the unit circle in the p-norm where p is typically around 4. The case $p = 2$ is a Euclidean circle and the limit as $p \rightarrow \infty$ is a Euclidean square. The previous post introduced three functions $L_i(x, y)$ such the level set of each function forms a [?] The post Smoothed polygons first appeared on John D. Cook .

10. Your Linux distribution may no longer auto-generate new SSH host keys

Source: Chris's Wiki :: blog | Published: 2026-05-07T14:30:47Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/linux/SSHHostKeysAndAutogeneration>

All Linux distributions (and all systems) face the need to generate SSH host keys when your system gets installed. One traditional way this was done was if the system started and discovered it had no SSH host keys, it would generate new ones. One way this was handy was that if you wanted to generate new SSH host keys for some reason, you could remove the existing ones and either reboot or restart the SSH daemon (which would usually trigger this). As I found out the hard way the other day, some Linux distributions don't do this any more. In particular, Ubuntu doesn't. If you remove your SSH host keys, your SSH daemon will refuse to (re)start, and as far as I know there's no convenient, simple way to regenerate the necessary keys. If you make this mistake (as I did), you'll get to have fun looking up the ssh-keygen arguments you need (and then typing them in on the system console or a serial connection). Before I started writing this entry, I would have guessed that this was common behavior across multiple distributions, because in this day and age it makes sense for your SSH keys to be set up in the installer rather than (possibly) on system boot, in a situation where the kernel's...

11. Maybe you shouldn't install new software for a bit

Source: Xe Iaso's blog | Published: Thu, 07 May 2026 00:00:00 GMT

12. I've found just the right paper for my Bottom Hole problem

Source: Terence Eden's Blog | Published: Thu, 07 May 2026 11:34:54 +0000

Link:

<https://shkspr.mobi/blog/2026/05/ive-found-just-the-right-paper-for-my-bottom-hole-problem/>

A few weeks ago, I went on a mad quest to find the newspaper used in 1995's Bottom Hole TV show. During the episode, Eddie starts reading this newspaper: Obviously, the "Hammersmith Bugle" is not a real paper and they never ran a headline "No News Shocker". But judging from all the other shots, the prop is based on a real newspaper. So I decided to rip off Dirty Feed's shtick and find out?

13. Free as in Tribbles

Source: Andrew Nesbitt | Published: 2026-05-07T10:00:00+00:00

Link: <https://nesbitt.io/2026/05/07/free-as-in-tribbles.html>

The free software movement gave us two prepositions to argue over. Free as in beer : it costs you nothing. Free as in speech : you can do what you like with it. Stallman spent decades insisting the second was the one that mattered and the first was nearly a distraction, which is why the FSF ended up maintaining a page about the word ?free? that runs longer than most licences. Somewhere around the time open source started turning up in procurement meetings, a third variant appeared: free as in puppy . The software costs nothing to take home, but now it needs feeding, walking, and trips to the vet, and someone has to look after it when you're on holiday. It was the total-cost-of-ownership argument with fur on, and it was a useful corrective because it moved the conversation from the licence to the lifecycle. I liked it enough to give a whole talk under that title at Bath Ruby in 2018, so consider what follows me retiring my own metaphor rather than picking a fight with someone else's. The puppy metaphor fit the era it came from, and I think it fit the point I was making then. You'd bring in one big open source thing, a database or an application server or a CMS, and your ops team wo...

14. How Long Do We Wait for New Inventions?

17. Article previews in RSS

Source: Entropic Thoughts | Published: Thu, 07 May 2026 00:00:00 +0200

Link: <https://entropicthoughts.com/article-previews-in-rss>

Since about three years past time immemorial, the RSS feed for this site has been very anaemic. It had article titles and dates, and that was it. Many readers have requested that I include the full article in the feed, or at least a preview, but I've always put it off because it has sounded difficult to accomplish technically. The way the RSS feed for this site is generated is in two steps: First a little loop in Emacs Lisp runs through the first few items of a sorted and filtered list of files belonging to this project. This loop constructs an org-element syntax tree for the RSS feed, and renders it out to a temporary file as an Org mode file. Then the regular Org exporting framework takes over and exports that file as an RSS file using the ox-rss backend. (Continue reading the full article on the web.)

18. Monitor your devices with LibreNMS on FreeBSD

Source: IT Notes | Published: Thu, 07 May 2026 10:45:00 +0000

Link: <https://it-notes.dragas.net/2026/05/07/monitor-your-services-with-librenms-on-freebsd/>

LibreNMS has been a faithful companion for years now. It quietly handles the monitoring of my servers, devices, and services without demanding much in return - exactly what you want from a tool whose job is to watch over everything else. It's a solid alternative to heavier solutions like Zabbix, and it gives you alerts, data, and graphs on virtually anything reachable over SNMP. I usually install it on a host that is not reachable from the outside, then let it poll all the devices through a VPN: a single observation point, clean perimeter. The ability to create multiple dashboards - and to filter them by user - has also let me give clients a transparent window onto their own servers. Transparency, in my experience, is always the better long-term bet. Together with Uptime-Kuma (and the good old Nagios/Munin pair), LibreNMS lives in a FreeBSD jail on my monitoring servers and just does its job. This post walks through a plain installation of LibreNMS on FreeBSD: package-based, no reverse proxy, no HTTPS, no fancy hardening. The goal is to get to a working setup you can build on top of. Assumptions FreeBSD 15.0-RELEASE, in a jail or on a dedicated VM/host nginx + php-fpm + MySQL 8.4...

19. The Intolerable Hypocrisy of Cyberlibertarianism
