Release: llm 0.37.1 A bugfix release for LLM , with contributions from Steven Huang , Tao An , Arjan Mossel , and XQ . Tags: llm

3. Salon Ceases Publication
Source: Daring Fireball | Published: 2026-11-05T21:31:04Z
Link: https://www.salon.com/2026/11/05/goodbye-from-salon/
Salon, in an unsigned goodbye post: Thirty-one years is a remarkable run, but what matters most is what happened during those years: the journalism, the ideas, the voices, the conversations and the community that grew around them. Salon helped demonstrate what digital journalism could be and could become. We hope that legacy will continue to matter long after today. Andy Baio : I hope the archives stay online, but considering the care taken for this announcement, I doubt it. Salon felt old and established when I started Daring Fireball in 2002. They were pioneers of treating the web as a first-class medium. A quick search indicates that I?ve linked to Salon in 27 posts here, starting with this one in 2003 (which was primarily a retort to a Paul Boutin column for Slate), and most recently with this April 2025 post that linked to a 2013 Salon article . ?

4. Meta Releases Mac Version of Edits
Source: Daring Fireball | Published: 2026-11-05T20:27:05Z
Link: https://edits.instagram.com/blog/edits-desktop-video-editor/
From Instagram?s Edits blog: I?m Brett Westervelt, and I lead the Edits app. In just over a year, 50 million people have made Edits part of how they bring ideas to life, and we?re excited to expand what Edits can do for creators. Today we?re bringing Edits to the big screen. The first version of our desktop editor is now available for macOS. We?ve designed it to support more involved projects, where a larger screen and the precision of a mouse and keyboard really matter. Just like Edits on mobile, we?ll be updating our desktop app every week, so let us know what you think and what you?d like to see next. Edits isn?t an app I need but I?m glad to see the resurgence in native Mac app development continue. I mean Instagram waited 15 years before they supported the iPad with their main app. Now they?ve got a native Mac video editor. That?s cool, and the app seems good. Looks like it?s SwiftUI? Someone on the team needs to go through the entire menu bar and properly title-case all the menu item commands, but overall it passes the sniff test. (It supports MacOS 15 Sequoia, but the icon looks lame ? a sharp-cornered square .) But I can?t help but think this just shows how Apple has ceded...

5. The New York Times (et al.) Sues Brave for Copyright Infringement, Selling Scraped Content to AI Companies for Model Training
Source: Daring Fireball | Published: 2026-11-03T15:46:25Z
Link: https://www.theverge.com/tech/1024588/brave-lawsuit-ai-scraping-new-york-times
Jay Peters, The Verge: The New York Times and a group of other publications have filed lawsuits against the company that makes the Brave web browser over alleged unlawful scraping to train AI and also letting users bypass their paywalls, as reported by Reuters . According to a complaint filed by the New York Daily News, the Chicago Tribune, and the Orlando Sentinel, Brave Software

has monetized its index of scraped websites by, in part, providing AI companies with paid access to ?real-time online content from the Brave Index.? The AI companies then use that index to train their models, access content to ?respond to specific user queries,? or both. Brave has allegedly provided ?stolen copyrighted content? to ?many? AI companies including Anthropic, Perplexity, Mistral, xAI, and Cohere. Brave also promotes ?hundreds of top publishers? as being accessible through its ?Paywall blocker? feature in its browser. Brave?s monetization strategies have long been shifty AF . ?

6. It’s unbreakable in theory
Source: Software and Tech stories from an Insider - iDiallo.com | Published: Thu, 05 Nov 2026 20:20:10 GMT
Link: https://idiallo.com/byte-size/unbreakable-in-theory
I’ve seen the picture of the iPhone Duo, still in the store, perched on a stand, its screen flickering with broken white lines. Apple has touted testing the screen hinge, opening it mechanically thousands of times. The phone survived every test it was put through. Yet here it is, on the stand, with a broken screen. Wait till the product meets its first customer. I’m sure the tests worked in theory and in the delicate hands of its engineers. But customers’ hands are anything but delicate. Remember Elon Musk’s wrecking ball? They must have tested the Cybertruck’s window beforehand, but it took just one person outside the test group to break the glass with a single throw. I remember when my nephew was barely a year old, not even able to walk. I handed him a wooden spoon in the living room as a distraction while I ran to the kitchen to get some food. As soon as I got there, I heard a snap. I came back to find this little boy holding the spoon, broken in two. It was a hard spoon, and there was no way his one-year-old hands could break it in half, yet there was the proof in front of me. So yes, Apple tested the rigidity of the screen with fancy machines, but the iPhone Duo never stood a...

7. A database is a store for global variables
Source: seangoedecke.com RSS feed | Published: Fri, 06 Nov 2026 00:00:00 GMT
Link: https://seangoedecke.com/a-database-is-a-store-for-global-variables/
Databases are for storing global variables. We usually call them ?rows? or ?records? instead, but they?re definitionally global variables: any part of your program can read or write them. Isn?t this kind of weird? It?s common programming advice that global variables are bad, and yet many elegant programs rely on databases. Either the common advice is wrong, or there?s something special about databases that makes them the exception to the rule. What?s so bad about global variables? Here?s the two main 1 reasons, in my view: They allow any part of your program to implicitly send data to any other part instead of passing it around via function signatures They couple different parts of your program: if one part depends on a variable having some value, any other part can break it Both of these apply to databases. Any part of your program that makes a query can send and receive data from any other part of your program. In practice this happens all the time: one function will save some data on a record, and another one will check for it. And if you haven?t seen bugs where some piece of code makes some incorrect expectation about the shape 2 of a database column, you haven?t been working...

8. You shouldn?t change the style of a Win32 static control after it has been created
Source: The Old New Thing | Published: Thu, 05 Nov 2026 15:00:00 +0000
Link: https://devblogs.microsoft.com/oldnewthing/20261105-00/?p=112835/
It doesn’t really handle that case. The post You shouldn?t change the style of a Win32 static control after it has been created appeared first on The Old New Thing .

9. Gadget Review: Tozo NC9 Pro Bluetooth Headphones ?????
Source: Terence Eden?s Blog | Published: Thu, 05 Nov 2026 12:34:17 +0000
Link: https://shkspr.mobi/blog/2026/11/gadget-review-tozo-nc9-pro-bluetooth-headphones/
The most interesting thing about these headphones isn’t the headphones; it’s their case. The good folks at Tozo have sent me a pair of their new ear-blasters. They’re a fairly standard

pair of in-ear headphones. Sound quality is good, noise cancelling is excellent, battery life is fine. You know, all pretty standard. But what's actually a little bit special is the charging case. As well?

10. Pluralistic: Without CDA 230, Facebook will own the internet forever (05 Nov 2026)
Source: Pluralistic: Daily links from Cory Doctorow | Published: Thu, 05 Nov 2026 08:53:45 +0000
Link: https://pluralistic.net/2026/11/05/see-you-in-court/
Today's links Without CDA 230, Facebook will own the internet forever: Small, well-managed online communities are especially vulnerable to legal threats. Hey look at this: Delights to delectate. Object permanence: "Perfect Thing"; Recruiters tell students Iraq war is over; Toothpick Final Fantasy replicas; "Eleanor & Park"; Voter Suppression Trail; "Science Comics Computers." Upcoming appearances: Kilkenny, Courtenay, Vancouver, Folkestone, Oxford, Sheffield, Virtual, Oxford, Montreal. Recent appearances: Where I've been. Latest books: You keep readin' em, I'll keep writin' 'em. Upcoming books: Like I said, I'll keep writin' 'em. Colophon: All the rest. Without CDA 230, Facebook will own the internet forever (permalink) The road to hell is paved with the depraved indifference to badly considered tech policy. The internet is one of those charismatic hyperobjects that wraps around our lives in myriad ways, so tech policy changes have a big blast radius. This isn't a counsel of despair. I firmly believe that we can make tech policy, and furthermore, that we must, but that policy has to be crafted in a way that's mindful of collateral damage. Take scraping. Most creative workers are r...

11. The benchmark where AIs have to lie to win
