

1. Changes to App Tracking Transparency in the E.U.

Source: Daring Fireball | Published: 2026-09-23T23:41:46Z

Link: <https://developer.apple.com/app-store/user-privacy-and-data-use/>

Apple Developer: As part of agreements with select European competition authorities, Apple is introducing changes to its App Tracking Transparency framework in the European Union. Beginning with iOS 27.2 and iPadOS 27.2, developers will have the option to use an alternative version of the App Tracking Transparency system prompt in the EU. The requirements for when you must seek permission to track users will remain the same. Due to legal requirements, only the alternative version of the system prompt is available for apps distributed in Germany, France, Italy, Poland, and Romania. In addition, for users in the European Union, you can reprompt [sic] a user via the App Tracking Transparency system prompt one year after the user's previous choice in your app's App Tracking Transparency system prompt, regardless of whether that choice was to accept or reject. A user cannot be re-prompted if they have disabled "Allow Apps to Request to Track" (renamed to "Allow Apps to Request to Link Your Activity Across Companies" in the EU) in their device's Settings. As Benjamin Mayo notes , "Allow Apps to Request to Link Your Activity Across Companies" is catchy. The gist of this is that there a...

2. "The iPhone 4 "Antennagate" Press Conference Q&A " Finally

I don't know what truck this video fell off the back of, why it took 16 years, or how it came into the hands of "Sir Mix-A-Lot Rare Music", but I'm sure glad it did.

3. "Prepare to Ship" Is a Clever Software Solution That Allows iPhone 18 Pro Max to Ship With a Battery That Would Otherwise Exceed International Shipping Regulations

Source: Daring Fireball | Published: 2026-09-23T20:12:16Z

Link: <https://support.apple.com/en-us/127848>

Apple Support: iPhone 18 Pro Max offers a huge increase in battery life, in part due to increasing the battery capacity to over 20 watt-hours (Wh). Devices with a single-cell battery over 20 Wh have additional shipping requirements in most countries and regions. To address these requirements, iPhone 18 Pro Max uses an innovative battery-firmware solution that limits battery capacity to below 20 Wh from the time it's manufactured through its transport from the factory. When you activate your iPhone, the limit is removed and the battery's full charging capacity is available. After activation, if you need to ship your iPhone 18 Pro Max for a repair, trade-in, return, or as a gift for example, use the Prepare to Ship feature in Settings. This feature discharges your battery to below 20 Wh and sets a charge limit so your iPhone stays below this limit while shipping. This can be reversed and you can reset your charge limit after shipping. The battery in iPhone 18 Pro Max is safe, including for shipping and air travel. This process is needed only to meet shipping requirements and isn't required while traveling or for any other iPhone model. (Via The Verge .) ?

4. Gemini 3.8 TTS Playground

Source: Simon Willison's Weblog | Published: 2026-09-23T17:12:27+00:00

Tool: Gemini 3.8 TTS Playground Google released two new Gemini text-to-speech models today - gemini-3.8-flash-tts and gemini-3.8-flash-lite-tts . They come with a library of over 2,000 voices, plus the ability to create a custom voice with "just a 30-second audio sample of your voice or a voice you have the rights to use". I vibe coded this bring-your-own-key playground interface with GPT-6 Astra, taking advantage of the open CORS policy of the underlying Gemini API. A notable feature of the API is that it makes it easy to define a full conversation between multiple characters, each with different voices and voice style instructions. Here's a short demo clip of a conversation between two pelicans debating if they should move to the

Pacifica Pier . I had Claude 4.5 Opus write the script and generate a URL to render it using the tool . Your browser does not support the audio element. It took ~20 seconds to generate 1m 18s of audio using Gemini 3.8 Flash TTS (not the cheaper Flash-Lite), at a cost of 2.74 cents.

Hey, you know it's like super obvious if you're using AI to write your scripts for TikTok and YouTube, right? [...] It's not just the general AI-isms of "it's not X, it's Y", or the rule of three, or the really weird broken staccato-like way of writing where you just say a lot of things with all these punctuation marks. and it sounds really deep, but it's not. It's the lack of anything . It's the lack of a definitive sort of spear of your voice. It's the fact I can tell you don't have opinions about the thing that you're talking about. ? @therealcornpop , on TikTok Tags: tiktok , ai , ai-misuse

In the novel Carry On, Mr. Bowditch, a sailor asked Nathaniel Bowditch to teach him how to do navigational calculations, but the man only knows how to add and subtract by counting on his fingers. He had not heard of multiplication. Bowditch is surprised, but realizes if he made tables of logs of trig functions, [?] The post Navigation with only addition, subtraction, and tables first appeared on John D. Cook .

10. Make Money to Make More Websites

Source: Jim Nielsen's Blog | Published: Wed, 23 Sep 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/make-money-to-make-more-websites/>

I was listening to the episode ?Make Your Own Thing? from the Off Protocol podcast where Jim Ray interviews John Gruber. They cover a variety of topics, including Gruber's thoughts on the dilution of personal brand by publishing through ?chain? platforms like Substack (I quite enjoyed the metaphor of a personal website where you publish your stuff to that of a chef/restaurant, but that's a separate post). Around ~1:13:00, Gruber quotes Walt Disney who said, ?We don't make movies to make money, we make money to make more movies.? And he goes on to argue that when you're forced to choose one of these priorities over the other ? because you will undoubtedly face decisions where the two sets of values come into direct opposition ? the company that prioritizes making movies over making money is fundamentally a different company

than the one that chooses making money over making movies. If you ultimately prioritize making money, then what's going to be ultimately great about your company is you make a lot of money (for shareholders, for owners, for yourself, for whomever). Conversely, if you ultimately prioritize making movies, then what's going to be ultimately great about your company...

11. The Year AI Came For Us: Teaching Entrepreneurship Will Never Be The Same

Source: Steve Blank | Published: Wed, 23 Sep 2026 13:00:12 +0000

This post previously appeared in Poets and Quants. 15 years ago, my Lean LaunchPad class changed how entrepreneurship is taught. The class is now taught in hundreds of universities worldwide and helped launch thousands of startups. But this past summer, I got thinking about whether AI killed our Lean LaunchPad class, and with it the [?]
