

1. Halide Mark III

Source: Daring Fireball | Published: 2026-06-07T00:49:15Z

Link: <https://www.lux.camera/halide-mark-iii/>

Ben Sandofsky, writing on the Lux Camera blog: After decades of shooting digital, I returned to analog photography in 2023. I thought it would be challenging, given the limited selection of film stocks, only to be surprised by how freeing it felt. It felt so much better to have a handful of amazing choices rather than photo-editor with thousands of presets. We owe that to film engineers who spent years developing versatile film stocks that work in a variety of situations. Inspired by "Less, but better," we partnered with the renowned Hollywood colorist Cullen Kelly to develop a succinct set of gorgeous, physically accurate processes exclusive to Halide. Each look was engineered with a specific intent. We verified every look thousands of times on real-world reference photos. Put another way: every look is a banger. Halide has always been a great "maybe the great" iPhone camera app for shooting RAW, with the intention of developing your images by hand in post. It's a great camera technically and a great app UI-wise. Mark II introduced Process Zero, which, in their own description, "uses zero AI and zero computational photography to produce beautiful, film-like natural photos". Pr...

2. 60 Minutes Correspondents Lesley Stahl, Bill Whitaker, and the Other Guy Will Stay at Show

Source: Daring Fireball | Published: 2026-06-06T20:04:06Z

Link: https://www.nytimes.com/2026/06/05/business/media/60-minutes-cbs-stahl-whitaker-wertheim.html?unlocked_article_code=1.oFA.xooG.Pz8cQv8odz7Z

Lesley Stahl, Bill Whitaker, and Jon Wertheim, in a memo to the 60 Minutes staff obtained by The New York Times (gift links): We have had a hard time deciding whether to stay at 60 Minutes. We're still deeply upset by the firings of Tanya and Draggan, strong leaders who everyone respected. As far as we can tell "because no explanation has ever been offered, they were expelled because they fought for our 60 Minutes values and stood up to protect our independence and integrity. Newsrooms are not supposed to be run like dictatorships. Collaboration and argument are the way we have always worked at 60. Don Hewitt actually encouraged loud passionate advocacy for our pieces. [...] We feared that our returning might be construed as an endorsement of the existing power structure. That is simply, categorically not the case. Here's why we're staying: We don't want to see 60 Minutes die. We'll see how long this lasts."

3. Trump Lawyer Argues Trump Can Tear Down Statue of Liberty

Source: Daring Fireball | Published: 2026-06-06T19:56:01Z

Link:

<https://talkingpointsmemo.com/edblog/trump-can-tear-down-statue-of-liberty-says-trump-lawyer>

Josh Marshall: In a hearing today about the president's bulldozing of the East Wing of the White House and plans to build a vast ballroom, a judge asked if the president could also bulldoze the Statue of Liberty and be subject to no legal challenge. The DOJ lawyer, Yaakov Roth, said that yes, President Trump could decide tomorrow to bulldoze the Statue of Liberty and no one could stop him. It was a good question from DC Court of Appeals Judge Patricia Millett since it brings the arguments and their implications clearly into the open. Reframe the question and the absurdity of this proposition becomes even more clear. If you hire someone to administer your estate, can they burn down the buildings on your estate or chop it up into parcels and sell it off? Presumably not. You hired them to run it, not to destroy it or sell it. It's not theirs. They were hired for a specific task. That person is your employee. The president is hired to administer the country and enforce its laws for four years. He doesn't own the country or its properties. Pathetic lickspittles, one and all."

4. micropython-wasm 0.1a2

Source: Simon Willison's Weblog | Published: 2026-06-06T04:26:06+00:00

Link: <https://simonwillison.net/2026/Jun/6/micropython-wasm/#atom-everything>

Release: micropython-wasm 0.1a2 I added a CLI to micropython-wasm (issue #7), inspired by the first draft of the blog entry when I realized it would be a great way to illustrate the Try it yourself section. Tags: python , sandboxing , webassembly , micropython

5. Running Python code in a sandbox with MicroPython and WASM

Source: Simon Willison's Weblog | Published: 2026-06-06T03:53:34+00:00

Link: <https://simonwillison.net/2026/Jun/6/micropython-in-a-sandbox/#atom-everything>

I've been experimenting with different approaches to running code in a sandbox for several years now, but my latest attempt feels like it might finally have all of the characteristics I've been looking for. I've released it as an alpha package called micropython-wasm , and I'm using it for a code execution sandbox plugin for Datasette Agent called datasette-agent-micropython . Why do I want a sandbox? What I want from a sandbox WebAssembly looks really promising here MicroPython in WebAssembly Building the first version Try it yourself Should you trust my vibe-coded sandbox? Why do I want a sandbox? My key open source projects - Datasette , LLM , even sqlite-utils - all support plugins. I absolutely love plugins as a mechanism for extending software. A carefully designed plugin system reduces the risk involved in trying new things to almost nothing - even the wildest ideas won't leave a lasting influence on the core application itself. My software can grow a new feature overnight and I don't even have to review a pull request! There's one major drawback: my plugin systems all use Python and Pluggy , and plugin code executes with full privileges within my applications. A buggy or m...

6. Communities of Not

Source: Armin Ronacher's Thoughts and Writings | Published: 2026-06-06T00:00:00+00:00

Link: <https://lucumr.pocoo.org/2026/6/6/communities-of-not/>

There is a strange thing that happens in communities that gather around abstinence from something: identity from opposition. At their best these communities are not just negative: childfree spaces can be about autonomy, choice and acceptance, anti-car spaces about safer streets and transit, and LLM-skeptical developer spaces about the future of labor, code quality and slop 1 . But the thing being refused often does not go away and instead becomes the main subject of the community's identity. That would be fine if it stayed at criticism, maybe even angry criticism, but more often than not it turns into policing and hatred towards others. An influencer without children becomes a parent, an urban bike commuter by choice buys a Porsche, a respected developer tries LLMs, and the community feels betrayed because it assumed they were members of the same tribe. The expulsion of that person (who never signed up to be a community member) is entirely imaginary but the punishment that the community unleashes is not: people pile on and shame them, quote them out of context and turn their weakest moments into proof that the person was always unserious, a sharlatan or should not be listened to....

7. How Many Tokens Did You Burn Today

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Wed, 27 May 2026 00:31:22 GMT

Link: <https://idiallo.com/blog/how-many-tokens-did-you-burn-today>

Early in my career, a manager at one of the big firms where I worked made a request so absurd it remains etched in my memory. I walked back to the team, repeated what he had asked, and couldn't finish the story without laughing. He wanted me to create a pie chart, of lines of code, per developer, per week. We all lost it. Our lead developer asked if, by any chance, the manager's eyes looked glassy. We laughed even harder. Because yes. Yes, they did. He was always high. That was twenty years ago. I've repeated that story countless times, and it always drew chuckles as we discussed the disconnect between software teams and management. Any software engineer could relate. We all knew that lines of code were a meaningless metric. A junior could write a thousand lines of spaghetti. A senior could fix the same problem with forty elegant ones. But then, last week, I found my name at the top of a leaderboard. My employer had been

exploring productivity tools and trialed one they thought would be useful. After the trial, they were quoted \$500k a year. The tool tracked developer productivity and integrated with Atlassian products, Microsoft, and many other services we used. The price was too...

8. Amber Alert sends Spam URL?

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Tue, 26 May 2026 03:25:17 GMT

Link: <https://idiallo.com/byte-size/amber-alert-with-spam-link>

Well that was weird. I just received an Amber Alert and the link led to a spammy looking website. Spam? The link leads to a 3gp file converter which is highly unusual. But the more I look at it, I have the impression it's a mistake. Most likely, they have exceeded the maximum number of characters for the Emergency Service alert. Here is the message: AN AMBER ALERT HAS BEEN ACTIVATED BY THE CALIFORNIA HIGHWAY PATROL. DALEZA FREGOSO WAS LAST SEEN ON MAY 24, 2026 AT 0400 HOURS IN LOS ANGELES COUNTY. THE SUSPECT VEHICLE IS A WHITE 2019 WHITE LAND ROVER DISCOVERY CA 9DAW715. CLICK ON THE LINK FOR ADDITIONAL INFORMATION. <https://bit.ly/A0> It seems like the total character count is 288. I'm not sure if the title should be included but if I add Child abduction (Amber alert) and the double space after, then we have 320 characters. Is this the character limit for emergency services? When I clicked on it, it took me to the bitly preview page: And clicking on the continue to destination button, I'm taken here: Suspicious Link I was starting to wonder if this was even a real Amber alert, and if somehow this was a spam message that was sent through. But unfortunately, it is a real amber alert,...

9. The commencement speech that shook the world

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Sat, 23 May 2026 01:14:24 GMT

Link: <https://idiallo.com/blog/the-commencement-speech-that-shook-the-world>

There he was, the man at the helm of innovation. Eric Schmidt, the former CEO of Google. The man who once said, google doesn't need to record your conversation, it already knows everything about you. Yet he didn't see this one coming. In his speech, he looked clear-eyed into the crowd of graduates and told them that AI is inevitable. There was a group of people who will have a hard time joining the workforce. Companies keep using AI as the excuse for laying off workers. Dario keeps telling us by next year, AI will take over all jobs and there is nothing we can do. They will have nothing, and they better embrace it and be happy. Well, they will have a school loan, but that's it. If you were an external observer, maybe an alien watching humanity from a distance, you would think that AI is a new species that emerged from a lake and is taking over the world. You would never tell that the people spreading this fear are also the ones selling the tool that they swear will turn us all into gods. It's not just a capable tool that can be useful for coding, writing, and retrieving existing information. No. It's the word itself. The all or nothing. The alpha and the omega. And it comes as a m...

10. From Kepler to Bessel

Source: John D. Cook | Published: Sat, 06 Jun 2026 18:46:02 +0000

Link: <https://www.johndcook.com/blog/2026/06/06/from-kepler-to-bessel/>

The previous post very briefly said that the integral representation for Bessel functions was motivated by solving Kepler's equation. This post will go into more detail. Kepler's equation There are multiple ways to describe the position of a planet in an elliptical orbit around a star. For historical reasons, these descriptions have arcane names such [?] The post From Kepler to Bessel first appeared on John D. Cook .

11. This Week in Package Management: 6 June 2026

Source: Andrew Nesbitt | Published: 2026-06-06T10:00:00+00:00

Link: <https://nesbitt.io/2026/06/06/this-week-in-package-management.html>

Third week of the roundup, built from the package manager OPML feed collection and whatever I've posted or boosted on Mastodon . Five new project blog feeds and the NixOS announcements feed landed in the OPML this week. Security Bundler 4.0.13 ships Cooldown , a configurable time

window that holds back resolution to gem versions younger than N days, so a freshly published malicious release ages past the window before a bundle install will pick it up. The companion RubyGems 4.0.13 release blocks gem extraction from escaping the destination directory via pre-existing symlinks. The Packagist supply-chain series continues. Closing Composer's Download Fallback Paths covers how the dist-to-source fallback, originally designed for resilience, can be used to fetch a different artifact than the one Composer expected. Blocking Malware Downloads for Every Composer Version describes how Private Packagist enforces malware blocking for installs from Composer versions older than 2.10, before the dependency policy framework existed. Enforce a Safe Composer Version Across Your Organization closes the loop by letting Private Packagist organisations restrict which Composer client versions can fetch...

13. There's still no point in gigabit broadband

Source: Terence Eden's Blog | Published: Sat, 06 Jun 2026 11:34:57 +0000

Link: <https://shkspr.mobi/blog/2026/06/theres-still-no-point-in-gigabit-broadband/>

Six years ago, I nearly got my ISP to upgrade our fibre connection to 1Gbps. As I said at the time: This is a curmudgeonly post which is going to look ridiculously outdated in a few years. What's the point of Gigabit broadband? Well, it's a few years later and Virgin Media have just given me their Gig1 package for £30 per month. Nice! With all the inflation related price rises, it's great to ?

14. Update: ending paid subscriptions, + Substack

Source: Westenberg. | Published: Sat, 06 Jun 2026 23:11:51 GMT

Link: <https://www.joanwestenberg.com/update-ending-paid-subscriptions-substack/>

Hi everyone, I'm making a change this week: I'm turning off paid subscriptions. I'm no longer comfortable putting my writing and work behind a paywall. I want it to be free, open, and accessible to anyone who finds it useful. My work is already

15. Our Great War is a Spiritual War

Source: the singularity is nearer | Published: 2026-06-06T00:00:00-07:00

Link: <https://geohot.github.io/blog/jekyll/update/2026/06/06/our-great-war.html>

I often come back to the question of why this is happening. Why do people want the centralized world? Why do people want the administered reality? Why do people want to be managed? Why do people not want root? The answer is that those people prioritize convenience, safety, and comfort. But in the coming world, if these are your priorities, you will die . There used to be natural checks on these things. Life couldn't be too convenient, there were jobs that needed doing. Life couldn't be too safe, there were diseases, violence, death in childbirth, etc? Life couldn't be too comfortable, it was cold and you were forced into interactions with other people . Technology will remove all of these frictions. Machines will do all the work, you will never leave your house, and you will never be forced into an interaction you don't want . The people who lean into it will be 100% at the whim of whatever organizations offer it to them. A purposeless serf in a neo-feudal empire, not even valued for their labor, but valued because of a sadistic desire by their master to control others. Their entire agentic loop managed by something else. A complete outsourcing of the self. There's no coming back...

16. Pluralistic: Criticizing the everything machine (06 Jun 2026)
