1. datasette #3046: Don’t serve link: rel=next HTTP headers to Firefox for HTML pages
Source: Simon Willison’s Weblog | Published: 2026-11-07T23:57:46+00:00
Link: https://simonwillison.net/2026/Nov/7/link-rel-next/
datasette #3046: Don’t serve link: rel=next HTTP headers to Firefox for HTML pages I was looking at the Firefox network panel today when I noticed that requests to a Datasette table page were triggering an HTTP prefetch to the next page of rows in that table. This was happening because Datasette pages serve an HTTP link header like this: link: ; rel="next" This is bad. A tiny fraction of the visitors to one of those pages will click the "next" link, which means their browser is fetching unnecessary data and the Datasette server is having to render an entire page that then gets thrown away. I dug in and learned that Firefox has an issue that has been open for 24 years about this behavior... And one of the early comments on that issue links to my blog post from 2002 complaining about this feature. I hadn’t just forgotten that I had written about it, I had forgotten the feature entirely! 2. Yours Truly on Full Stack Creator, Talking About the New MacBook Pros With PROLED XDR Displays
Source: Daring Fireball | Published: 2026-11-07T21:14:09Z
Link: https://www.youtube.com/watch?v=f2GZtWuUPl0
Tyler Stalman and David Altizer were kind enough to have me on their show this week. These new MacBook Pros are very fun computers that are very fun to talk about. (We even sneak in some love for Ricoh?s legendary GR line of compact cameras. I used my original GR-D from 20 years ago to shoot this 2010 photo of Steve Jobs and Walt Mossberg that I linked to in my feature-length ? Touch and Glow ? piece yesterday.) ?

3. Steve Jobs on His Final Quarterly Analyst Call: ?We Think the Open Versus Closed Argument Is Just a Smokescreen?
Source: Daring Fireball | Published: 2026-11-03T15:40:34Z
Link: https://www.macworld.com/article/208438/jobs_transcript.html
After linking to it earlier today, I re-read Steve Jobs?s remarks from his last appearance on a quarterly analyst call. It?s a banger of a good read: You know, even if Google were right, and the real issue is ?closed? versus ?open,? it is worthwhile to remember that open systems don?t always win. Take Microsoft?s ?Plays For Sure? music strategy, which used the PC model ? which Android uses as well ? of separating the software components from the hardware components. Even Microsoft finally abandoned this ?open? strategy in favor of copying Apple?s integrated approach with their Zune player, unfortunately leaving their OEMs empty-handed in the process. Google flirted with this integrated approach with their Nexus One phone. In reality, we think the open versus closed argument is just a smokescreen to try and hide the real issue, which is, ?What?s best for the customer ? fragmented versus integrated?? We think Android is very, very fragmented, and becoming more fragmented by the day. And as you know, Apple strives for the integrated model so that the user isn?t forced to be the systems integrator. We see tremendous value at having Apple, rather than our users, be the systems integrat...

4. Chance Miller Reviews the New A20 Pro iPad Mini
Source: Daring Fireball | Published: 2026-11-03T14:51:14Z
Link: https://9to5mac.com/2026/11/03/new-ipad-mini-a20-pro-review/
Chance Miller, writing at 9to5Mac: Unfortunately, the new iPad mini?s screen has one limitation: it doesn?t support ProMotion, or a 120Hz refresh rate of any kind. Instead, it?s still locked to 60Hz. This is an incredibly frustrating decision that I can?t quite wrap my head around. Apple touts the iPad mini?s OLED screen as offering significantly faster pixel response time than the previous generation?s LCD panel, leading to improvements like smoother scrolling and reduced motion blur. I?ve noticed that things like swiping between Home Screen

pages, scrolling social media, and system animations are noticeably smoother. They aren?t, however, as smooth as an Apple device with a ProMotion display, and they?re not a substitute for a higher refresh-rate display. Apple is very stingy with ProMotion. Until last year it was exclusively available in iPhones, iPads, and MacBooks that had ?Pro? in their name. Last year they added ProMotion to two products without ?Pro? in their names: the iPhone 17 and iPhone Air. This year?s $2,000 iPhone Duo of course offers it now too. Apple refreshed the $1,600 Studio Display last year but it still only supports 60 Hz ; only the $3,300 Studio Display XDR...

5. A bit about email
Source: Maurycy’s Blog | Published: Fri, 06 Nov 2026 00:00:00 +0000
Link: https://maurycyz.com/misc/email/
Before you torch and pitchfork me, I’m aware most of this is simplified and doesn’t go into edge cases, even though the internet is composed entirely of edge cases. Otherwise, I’d be writing a whole book. First, some terminology; A typical email will past through many different components on it’s way to the recipient: 1. Sender’s MUA [Via SMTP on port 465] 2. Sending MSA 3. Sending MTA [Via SMTP on port 25] 4. Receiving MTA 5. Receiving LDA and message store [Via IMAP] 7. Receiver’s MUA (These aren’t all necessarily different machines or even different programs, but it is helpful to give a name for each step.) The mail user agent (MUA) runs on the user’s computer and is what they use to send or read messages. Let’s say they send something: that message will be uploaded to to the submission agent (MSA) which checks the user’s password before handing off to the mail transfer agent (MTA). The transfer agent’s job is to talk to the other mail servers and get the message to the receiving side’s MTA. Once received, it’s given to the local delivery agent (LDA) to be stored until the recipient checks their email. The name "LDA" is non-standard, but I use it to avoid having four different...

6. Reading List 11/7/2026

Florida?s property tax rollback, projected PCB shortages, the end of Tesla?s Cybertruck, the lack of progress in carbon storage, and more.

7. This Week in Package Management: 7 November 2026
Source: Andrew Nesbitt | Published: 2026-11-07T10:00:00+00:00
Link: https://nesbitt.io/2026/11/07/this-week-in-package-management.html
This week?s package management news, gathered from the package manager OPML feed collection , my posts and boosts on Mastodon , and anything people sent me. Version control and forge news is in the Wednesday This Week in Source Control roundup. Security Vox Pupuli fixed three critical vulnerabilities that a Neodyme researcher reported in OpenVox, the community fork of Puppet. OpenVox Server deserialised Ruby objects embedded in agent run reports, which allowed remote code execution. The shared Trapperkeeper authorisation library matched every plain-string rule in auth.conf as a wildcard, so a certificate for evil.target.example.com was accepted as target.example.com . The OpenVoxDB container image allowed any certificate to reach its API because its allowlist script failed on startup. All known Puppet implementations are affected, and the fixes are in openvox-agent 8.32.0 and 9.3.0 and openvox-server and openvoxdb 8.18.0 and 9.2.0. Updates to open source Puppet, including security fixes, have ended, so Vox Pupuli recommends migrating to OpenVox. An issue on actions/runner-images reports that GitHub?s public macOS runners still accept certificates from the compromised eMudhra inter...

8. Pluralistic: JS Tan and Clarissa Redwine’s "Against Tech Oligarchy" (07 Nov 2026)
Source: Pluralistic: Daily links from Cory Doctorow | Published: Sat, 07 Nov 2026 13:03:46 +0000
