

1. New release of LLM adds support for reasoning traces, OpenAI Responses, server-side tools, and smarter logging

Source: Simon Willison's Weblog | Published: 2026-08-04T23:58:24+00:00

Link: <https://simonwillison.net/2026/Aug/4/new-release-of-llm/#atom-everything>

I released LLM 0.32 this morning, the most significant new version of LLM since the initial launch of the project. The new version includes support for visible reasoning traces, server-side provider tools, redesigned content-addressable SQLite logs, new models, and new features enabled by the OpenAI Responses API. I also released a new version of the llm-anthropic plugin with substantial updates of its own. Headline features for LLM CLI users

Running LLM against reasoning models now displays their reasoning traces to standard error, so you can see what they are "thinking" without that information being included in the standard output that you might pipe to another tool. Add `-R/--hide-reasoning` to turn this off. LLM includes support out-of-the-box for the GPT-5.6 model family, and the new default model used with llm "prompt" is now the inexpensive but capable GPT-5.6 Luna. LLM calls can now use server-side tools from various providers. OpenAI provide a code execution environment as a server-side tool; LLM can now run prompts that benefit from that like so: `llm --tool CodeInterpreter 'Show current python and SQLite versions'` OpenAI also gets a WebSearch tool. The llm-anthropic p...

2. llm-anthropic 0.26

Source: Simon Willison's Weblog | Published: 2026-08-04T22:00:58+00:00

Link: <https://simonwillison.net/2026/Aug/4/llm-anthropic/#atom-everything>

Release: llm-anthropic 0.26 Includes new features enabled by LLM 0.32 : New models: claude-fable-5, claude-sonnet-5, and claude-opus-5. #75, #76 Added server-side tools for WebSearch, WebFetch, CodeExecution, and AnthropicMCP, available through LLM's -T interface or Python tools=. The previous -o web_search* options have been removed in favor of -T WebSearch. #79 Upgraded to llm>=0.32. Reasoning, tool calls, tool results, and server-side tool results now stream as typed events. Reasoning for llm CLI prompts now displays to standard error unless you pass --hide-reasoning/-R. Simplified extended thinking to thinking and thinking_effort (low, medium, high, xhigh, or max). Claude 5 models think by default; -o thinking 0 disables thinking for Sonnet 5 and Opus 5, while Fable 5 always thinks. -R/--hide-reasoning now omits reasoning from responses and logs. The thinking_budget, thinking_display, and thinking_adaptive options have been removed. #80 Tags: llm, anthropic, claude, model-context-protocol

3. PipeNetwork/minimax-h3-mlx

Source: Simon Willison's Weblog | Published: 2026-08-04T19:10:09+00:00

Link: <https://simonwillison.net/2026/Aug/4/minimax-h3-mlx/#atom-everything>

PipeNetwork/minimax-h3-mlx MiniMax released MiniMax-H3 two days ago - they describe it as a "a general-purpose, omni-modal generative system", which in practice means it accepts text, images, audio and video and can use them to generate up to 15 second video clips with audio included. This Python package ports it to MLX for running on Apple Silicon. I got it running on my M5 Max MacBook Pro. I cloned the repo and ran the model like this: # First download the models `uvx --from huggingface_hub hf download MiniMaxAI/MiniMax-H3 --include 'FL2VA/*' --exclude 'FL2VA/transformer/*' uvx --from huggingface_hub hf download pipenetwork/MiniMax-H3-MLX-8bit` # Now run the prompt `uv run --with mlx-mlm --with-requirements requirements.txt python scripts/generate.py "a rainbow colored skunk leaps over a mossy log in a supermarket" -o skunk.mp4 -c ~/.cache/huggingface/hub/models--MiniMaxAI--MiniMax-H3/snapshots/fa9c8ab1eaa21c8ae25e7e40b83b2e6002f340af/FL2VA -t ~/.cache/huggingface/hub/models--pipenetwork--MiniMax-H3-MLX-8bit/snapshots/3ac52081470b0488921c3ec3ba84a39097bf2361` Here's the video I got for the prompt: a rainbow colored skunk leaps over a mossy log in a supermarket Your brows...

4. ? OpenAI Responds to Apple?s Lawsuit and Motion for Preliminary Injunction: ?Apple Is Getting This Wrong?

Source: Daring Fireball | Published: 2026-08-04T22:51:19Z

Link: https://daringfireball.net/2026/08/openai_apple_is_getting_this_wrong

A blog post is an unusual way to respond to a high-stakes lawsuit, but OpenAI is an unusual company. A few snippets from their post, and some commentary.

TBPB seems like a show I wouldn?t enjoy guesting on, but I actually enjoy it quite a bit. ?

6. Apple Seeks Preliminary Injunction Against OpenAI in Trade Secrets Case

Source: Daring Fireball | Published: 2026-08-04T16:02:35Z

Link: <https://www.reuters.com/legal/litigation/apple-seeks-preliminary-injunction-against-openai-trade-secrets-case-2026-08-04/>

Reuters: Apple on Monday asked a U.S. judge for a preliminary injunction barring two former employees ?and OpenAI from accessing, acquiring, using or disclosing alleged confidential information as it moves ahead with its trade secrets case. [...] The iPhone maker also filed a concurrent motion on Monday seeking expedited discovery, including production of documents relating to the defendants? alleged access ?of Apple?s proprietary and trade secret information. It asked the judge to order the two ?former Apple employees named in the lawsuit, Chang Liu and Tang Yew Tan, to sit for depositions, along with OpenAI employee Yu-Ting Peng and an unnamed OpenAI employee who previously worked at ?Apple. The request for expedited discovery and the depositions, I understand. Apple wants to move fast, and they want to get depositions (especially, I?m sure, with Tan) now. The preliminary injunction request, though, I think Reuters is underplaying here. I suggest reading Apple?s actual motion , not the news coverage. From Apple?s motion: OpenAI, its people, and partners should not be permitted to develop, release, and benefit from products using and developed with the benefit of Apple?s trade se...

7. Creating a fake agile wrapper that is technically agile but is not useful outside its home apartment, part 2

Link: <https://www.johndcook.com/blog/2026/08/04/metallic-alchemy/>

After writing the previous post about metallic ratios, I thought about the analogy to alchemy and the attempt to make precious metals out of base metals. When can you make one metallic ratio out of another? Can you make the golden ratio out of the lead ratio? Before we can make gold out of lead, [?] The post Mathematical alchemy first appeared on John D. Cook .

9. Ratio of metallic ratios

Link: <https://www.johndcook.com/blog/2026/08/04/ratio-of-metallic-ratios/>

The golden ratio is the first and best known of the metallic ratios. I?ve written about the silver ratio a few times, most recently here. And I?ve mentioned the bronze ratio a couple times. The metallic ratios after bronze don?t have standard names. The n th metallic ratio $M(n)$ is the number whose continued fraction representation [?] The post Ratio of metallic ratios first appeared on John D. Cook .

10. brew install actions/checkout

Source: Andrew Nesbitt | Published: 2026-08-04T10:00:00+00:00

Link: <https://nesbitt.io/2026/08/04/brew-install-actions-checkout.html>

In December I went through why uses: is a package manager with no lockfile, no integrity hashes and no transitive visibility , and in April through the run of incidents that followed from that. GitHub's 2026 security roadmap has since committed to a lockfile, now in preview as gh-actions-lock , and made immutable actions the preferred resolution path. Neither of those changes adds any review between an action author tagging a release and the runner executing it. Homebrew has run that kind of curated index for fifteen years and, as of the immutable-actions rollout, stores its artifacts as OCI manifests on ghcr.io alongside the actions themselves, so I spent some time working out how much of a GitHub Actions registry you could assemble from Homebrew parts. Shared storage Immutable actions and Homebrew bottles are both OCI artifacts on ghcr.io: actions/publish-immutable-action tars the action directory, pushes it as a layer with artifactType: application/vnd.github.actions.package.v1+json , attaches a sigstore bundle through the OCI referrers API, and tags the manifest with the semver, after which a workflow referencing actions/checkout@4.2.2 resolves through pkg.actions.githubuserco...

Americans face the same digital sovereignty risk. America is a lawless place now, where a pliable Supreme Court and supine Congress have affirmed that "it's not...

13. Gig Review: Belle & Sebastian - If You're Feeling Sinister at Margate Dreamland ?????

Source: Terence Eden's Blog | Published: Tue, 04 Aug 2026 11:34:22 +0000

Link: <https://shkspr.mobi/blog/2026/08/gig-review-belle-sebastian-if-youre-feeling-sinister-at-margate-dreamland/>

It's 1998 and Doogie, the guy across the hall in our student accommodation, will not stop playing The Boy With The Arab Strap. Eventually I crack and ask him who the band are. He infodumps on me with all the authority of an 18 year old music snob about this cool new Scottish band called Belle & Sebastian. I slip him a tenner, a couple of Smirnoff Ice, and the promise of my help on the next?
