

1. Uber Caps Usage of AI Tools Like Claude Code to Manage Costs

Source: Simon Willison's Weblog | Published: 2026-06-03T12:01:27+00:00

Link: <https://simonwillison.net/2026/Jun/3/uber-caps-usage/#atom-everything>

Uber Caps Usage of AI Tools Like Claude Code to Manage Costs I wrote the other day about Uber blowing its 2026 AI budget in four months, and how that wasn't particularly surprising given they would have set that budget in 2025, before anyone could have predicted how popular token-burning coding agents were about to become. Natalie Lung for Bloomberg: The rideshare giant is limiting all employees to \$1,500 in monthly token spending per AI coding tool, an Uber spokesperson said in response to a Bloomberg News inquiry. That means spending on one tool doesn't have a bearing on the budget for another. The limits, which have been instituted in recent months, only apply to agentic coding software such as Cursor or Anthropic PBC's Claude Code. A \$1,500 monthly limit per tool strikes me as a rational policy response to over-spending, and much more sensible than those tokenmaxxing leaderboards encouraging employees to compete for as much AI usage as possible. It's also interesting in that it hints at a real dollar value for what Uber is getting out of these tools. If we assume two actively used tools per engineer that's $\$3,000 * 12 = \$36,000$ cap per engineer per year. Levels.fyi lists the m...

2. California Brown Pelican

Source: Simon Willison's Weblog | Published: 2026-06-02T18:17:03+00:00

California Brown Pelican, in Fort Mason, CA, US I'm at the Microsoft Build conference today, held at Fort Mason in San Francisco. There are California Brown Pelicans diving into the water directly behind venue! Tags: microsoft , ai , generative-ai , llms , llm-release

3. Pasted File Editor

Source: Simon Willison's Weblog | Published: 2026-06-02T04:13:36+00:00

Link: <https://simonwillison.net/2026/Jun/2/pasted-file-editor/#atom-everything>

Tool: Pasted File Editor I really like how you can paste a large volume of text into claude.ai (or the Claude desktop/mobile apps) and it will detect it as a large paste and turn it into a file attachment instead. I decided to have Codex desktop build me a version of that as a prototype. You can also open files directly - including images which will be shown as thumbnails - or drag files onto the textarea. 4. Scott Pelley on Leaving 60 Minutes?: Incompetence and Unprofessionalism in the New Management Have Wreaked Havoc?

Source: Daring Fireball | Published: 2026-06-03T23:19:28Z

Link: https://www.instagram.com/p/DZHIWAoG3_3/?img_index=1

Scott Pelley, in a statement posted on Instagram (which I'll quote in full, as the original is locked behind a dickwall if you're not signed in to an Instagram account): There has never been anything in America like 60 Minutes. The Sunday tradition is the most successful program of any kind in history. For more than a decade, its innovative growth on every major online platform has extended its reach to countless millions around the world. This spring, at the end of our 58th season, 60 Minutes grew rapidly with an unheard-of 9% jump in viewers on CBS. 60 has been the number-one program in America for decades because our beloved audience finds integrity, quality, and humanity in our stories. When stewardship of the program passed to my colleagues and me, our responsibility was to expand energetically into a new age of media technology while preserving the values our audience expects. Now, the new owner of our network is casting this legend aside, apparently to curry a moment of favor with the Trump administration. The waste is heartbreaking. Last month, 60 Minutes lost its DNA when our entire senior leadership and two of our best on-air correspondents were cruelly fired without c...

5. The '60 Minutes' Purge

Source: Daring Fireball | Published: 2026-06-03T21:32:52Z

Link: [https://www.paramountpressexpress.com/cbs-news-and-stations/shows/60-minutes/talent/Paramount's 'Press Express' page promoting 60 Minutes still lists all eight correspondent from the 2025-2026 season, the program's 58th. \(Perhaps they fired the person responsible for keeping the cast page up to date.\) In the order they appear on Paramount's listing: Lesley Stahl Scott Pelley fired today Bill Whitaker Anderson Cooper left on his own after 20 years Sharyn Alfonsi fired last week L. Jon Wertheim Cecilia Vega fired last week Norah O'Donnell](https://www.paramountpressexpress.com/cbs-news-and-stations/shows/60-minutes/talent/Paramount's%20Press%20Express%20page%20promoting%2060%20Minutes%20still%20lists%20all%20eight%20correspondents%20from%20the%202025%202026%20season%2C%20the%20program's%2058th.%20(Perhaps%20they%20fired%20the%20person%20responsible%20for%20keeping%20the%20cast%20page%20up%20to%20date.)%20In%20the%20order%20they%20appear%20on%20Paramount's%20listing%3A%20Lesley%20Stahl%20Scott%20Pelley%20fired%20today%20Bill%20Whitaker%20Anderson%20Cooper%20left%20on%20his%20own%20after%2020%20years%20Sharyn%20Alfonsi%20fired%20last%20week%20L.%20Jon%20Wertheim%20Cecilia%20Vega%20fired%20last%20week%20Norah%20O'Donnell)
A big part of the brand for 60 Minutes is that the show doesn't change. Someone who last saw it 40 years ago would instantly recognize it today. There's no silly fucking theme song. There's no glossy set. There's a ticking stopwatch, a logotype set in Microgramma/Eurostile, and correspondents sit against a black background. And correspondents measure their tenure not by years but by decades. Of the original hosts, Harry Reasoner was there for 23 years (and left the cast only upon his death at 68 in 1991), Dan Rather was there for 38 years, Mike Wallace for 40, and Morley Safer for 48. 48 years! Of the current hosts, Lesley Stahl has been there since 1991. I graduated high school that year. In just six months since David...

6. CBS News Fires Scott Pelley of '60 Minutes'

Source: Daring Fireball | Published: 2026-06-03T19:49:56Z

Link: <https://www.nytimes.com/2026/06/02/business/media/scott-pelley-cbs-bari-weiss.html>
Benjamin Mullin and Michael M. Grynbaum: In a formal letter to Mr. Pelley, which was obtained by The New York Times, Mr. Bilton wrote that the correspondent had been "terminated for cause effective immediately." The letter is a must-read. No summary of it can capture just how pathetic a man Nick Bilton is. He disputes nothing Pelley said in the Monday staff meeting, and firing Pelley proves that Pelley was exactly right. Mr. Pelley, in a telephone interview on Tuesday evening shortly after he was fired, said he had devoted decades of his life to '60 Minutes,' which he said he still cared about deeply. "I have been in combat in Afghanistan," Mr. Pelley said. "I have been in combat in Iraq. I have been in the war zone in Ukraine multiple times, risking my life and the happiness of my family because of my devotion to the broadcast." [...] Earlier on Tuesday, Mr. Pelley sent a statement to The Times that assailed the new leadership of CBS News, writing that "incompetence and unprofessionalism in the new management have wreaked havoc" at the network. "He added, "The collapse of values at the top has become untenable." Mr. Pelley also wrote that senior managers at CBS News had pressured...

7. Rotation revisited: Another unidirectional algorithm

Source: The Old New Thing | Published: Tue, 02 Jun 2026 14:00:00 +0000

Moving in a straight line, in a different way. The post Rotation revisited: Another unidirectional algorithm appeared first on The Old New Thing.

8. Now that your newsletter is AI-generated, I've Unsubscribed

Source: Software and Tech stories from an Insider - iDiallo.com | Published: Wed, 03 Jun 2026 21:10:00 GMT

Link: <https://idiallo.com/blog/unsubscribed-from-ai-generated-newsletters?src=feed>

I've remained subscribed to some newsletters for over 20 years. The authors managed to keep my attention all that time. But then, one day, they decided to switch to an AI-generated newsletter without making any announcement. After a couple of weeks of blue high-tech image thumbnails, I simply hit unsubscribe. Here's what happened: a person earned my trust. He maintained that trust for all those years. But then he thought the best way to improve was to take himself out of the equation. If you're just going to present me with prompt-generated content, I hate to break it to you but I have access to ChatGPT, and I can do that myself. The reason the human voice matters to me is because there's real experience behind the words. The oldest newsletter in my inbox is from when I was just 12 years old. It was from a French writer I used to read. After a decade of following him, the emails stopped coming. I was only reminded

a few years later, when the emails started coming back. I didn't jump on it immediately. I didn't even remember who it was. But when I read one at random, the words were different, the tone was nostalgic, and the name was unfamiliar. I dug deeper and found that the autho...

9. Naively summing an alternating series

Source: John D. Cook | Published: Wed, 03 Jun 2026 15:13:24 +0000

Link: <https://www.johndcook.com/blog/2026/06/03/naive-sum/>

Suppose you run across the power series for the exponential function and decide to code it up. Good idea: you'll probably learn something, though maybe not what you expect. Maybe you decide a tolerance of 10^{-12} is good enough, and so you sum the terms until the next term to add is below the tolerance. [?] The post Naively summing an alternating series first appeared on John D. Cook .

10. My GNU Emacs completion setup (as of June 2026)

Source: Chris's Wiki :: blog | Published: 2026-06-03T21:09:07Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/programming/EmacsCompletion-2026-06>

In GNU Emacs, completion of things is a complex subject . There are at least two sorts of completion (in the minibuffer and in buffers you're editing) and many options for how things work. There's a whole ecology of third party packages for changing how both sorts of completion operate, some of which have become built in to GNU Emacs over time. For various reasons (cf) I'm going to write down my current setup for this. For minibuffer completion I use: vertico to show more completion candidates, with some significant customizations and custom code to complete MH folder names , and also some forced completion categories . marginalia to add more information about completion candidates, except that I've then arranged for completion of GNU Emacs functions and variables to show less information because I mostly want to see their docstrings, not type and argument information. (Doing this isn't a standard marginalia option and instead requires somewhat annoying hacks.) orderless to provide more powerful completion options, except I use orderless in an unusually minimal configuration . Orderless technically can be used for completion in buffers, but I don't have that connected up in an...

11. A wish for automatic or semi-automatic disk setup in Linux server installers

Source: Chris's Wiki :: blog | Published: 2026-06-03T02:45:22Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/linux/InstallerAutomatedDiskSetupWish>

An extremely common pattern for our Ubuntu servers is that they have exactly two disks and we want those two disks to be set up as mirrored system disks, with a UEFI boot partition in each and the root filesystem in a mirrored RAID array taking up all of the rest of the space (and for /boot/efi to come from the first disk). If a system has a single disk, we want the single-disk, non-mirrored version of this; if the system has more than one or two disks, the installer shouldn't try to do anything because we have an unusual system that needs hand holding; it should either stop to ask for help or abort. As far as I can tell, this isn't something you can readily express in Ubuntu's server installer or really anything else that Canonical offers, although the server installer is entirely capable of creating this layout if you set it up by hand. I'm not sure it's very available in any Linux server installer, although I haven't looked outside of Ubuntu. (Some installers can run scripts that can rewrite the installer instructions, so you could in theory write a script that sniffed around the system, detected everything, possibly did some initial setup, and then rewrote the installer instru...

12. Skills Registry Threat Models

Source: Andrew Nesbitt | Published: 2026-06-03T15:00:00+00:00

Link: <https://nesbitt.io/2026/06/03/skills-registry-threat-models.html>

Agent skills bundle prompts, scripts, dependencies, and tool permissions for AI agents to load on demand. A skills registry is the distribution channel for them: a hosted marketplace, an indexed hub, or in many cases just a curated list of GitHub repos. ClawHub , Tessel , and skills.sh have all launched in the past year, mostly modelled on existing package registries. Because a skill can declare dependencies on packages from npm, pip, cargo, brew, go, apt, or

anything else, often several at once, a skills registry is a strict superset of a package-manager client. Installing one skill runs install commands across several package managers on the user's machine, on behalf of a manifest the user never read, so every threat the package-manager world has spent the last decade documenting still applies inside a skill's install path. A skill body joins the agent's system prompt on activation, making it a prompt-injection vector as well as a code-execution one, which packages can't be. Tool permissions are inherited from the runtime, so a skill runs with whatever bash, file edit, and network grants the session has already approved. And the resolution path in most loaders accepts an arbitrar...

13. A survey of inlining heuristics

Source: Max Bernstein's Blog | Published: Wed, 03 Jun 2026 00:00:00 +0000

Link: https://bernsteinbear.com/blog/inlining-heuristics/?utm_source=rss

Compilers, especially method just-in-time compilers, operate on one function at a time. It is a natural code unit size, especially for a dynamic language JIT: at a given point in time, what more information can you gather about other parts of a running, changing system? I don't have any data to back this up?maybe I should go gather some?but on average, methods are small. Especially in languages such as Ruby that use method dispatch for everything, even instance variable (attribute, field, ?) lookups, they are small. And everywhere. This makes the compiler sad. If we are to continue to anthropomorphize them, compilers like having more context so they can optimize better. Consider the following silly-looking example that is actually representative of a surprising amount of real-world code:

```
class Point attr_reader :x, :y def initialize ( x , y ) @x = x @y = y end def distance ( other ) Math . sqrt (( @x - other . x ) ** 2 + ( @y - other . y ) ** 2 ) end end def distance_from_origin ( x , y ) Point . new ( x , y ) . distance ( Point . new ( 0 , 0 ) ) end
```

 Right now, in the distance_from_origin method, I count 8 different method calls: Point.new Point#initialize Point.new Point#initiali...

14. Welcoming the Philippine Government to Have I Been Pwned

Source: Troy Hunt | Published: Wed, 03 Jun 2026 03:40:17 GMT

Link: <https://www.troyhunt.com/welcoming-the-philippine-government-to-have-i-been-pwned/>

Today, we welcome the 46th government onboarded to Have I Been Pwned's free gov service: the Philippines. The Philippines' National CERT, working with the Department of Information and Communications Technology, now has access to monitor official government domains against the data in HIBP. This gives their Cyber

15. Is datacentre sovereignty really that important?

Source: Martin Alderson | Published: Thu, 04 Jun 2026 00:00:00 GMT

Link: https://martinalderson.com/posts/is-datacentre-sovereignty-really-that-important/?utm_source=rss&utm_medium=rss&utm_campaign=feed

The UK is obsessed with building AI datacentres at home. But the arguments for sovereignty - latency, tax, control - mostly don't hold up.

16. Modern C++ for C Programmers: Part 4

Source: Bert Hubert's writings | Published: Thu, 12 Jul 2018 13:07:40 +0200

Link: <https://berthub.eu/articles/posts/cpp-4/>

Welcome back! In part 3 I discussed classes, polymorphism, references and templates, and finally built a source indexer out of basic containers that achieves 60MB/s indexing speed. In this part we continue with further C++ features that you can use to spice up your code ?line by line?, without immediately having to use all 1400 pages of ?The C++ Programming Language?. There is frequent reference to the indexing example from part 3 so you may want to make sure you know what that is about.

17. Werving nieuwe collega's: niet zo moeilijk, toch gaat het fout

Source: Bert Hubert's writings | Published: Mon, 09 Jul 2018 11:05:31 +0200

Link: <https://berthub.eu/articles/posts/werving/>

Welkom! Veel bedrijven en scholen in mijn omgeving worstelen op dit moment met het vinden van personeel. Sinds 1999 neem ik mensen aan en help ik bij werving, voor mijn eigen bedrijf & dat van anderen, maar ook voor scholen en instellingen. En als ik eerlijk ben, ik ben er inmiddels best goed in. In ieder geval ben ik onvoorstelbaar trots op de uitstekende mensen die ik heb kunnen overtuigen bij me te werken!

18. Modern C++ for C Programmers: Part 3

Source: Bert Hubert's writings | Published: Mon, 02 Jul 2018 21:30:31 +0200

Link: <https://berthub.eu/articles/posts/cpp-3/>

Welcome back! In part 2 I discussed basic classes, threading, atomic operations, smart pointers, resource acquisition and (very briefly) namespaces. In this part we continue with further C++ features that you can use to spice up your code ?line by line?, without immediately having to use all 1400 pages of ?The C++ Programming Language?. Various code samples discussed here can be found on GitHub. If you have any favorite things you'd like to see discussed or questions, please hit me up on @bert_hu_bert or bert@hubertnet.
