

1. microsoft/VibeVoice

Source: Simon Willison's Weblog | Published: 2026-04-27T23:46:56+00:00

Link: <https://simonwillison.net/2026/Apr/27/vibevoice/#atom-everything>

microsoft/VibeVoice VibeVoice is Microsoft's Whisper-style audio model for speech-to-text, MIT licensed and with speaker diarization built into the model. Microsoft released it on January 21st, 2026 but I hadn't tried it until today. Here's a one-liner to run it on a Mac with uv , mlx-audio (by Prince Canuma) and the 5.71GB mlx-community/VibeVoice-ASR-4bit MLX conversion of the 17.3GB VibeVoice-ASR model, in this case against a downloaded copy of my recent podcast appearance with Lenny Rachitsky : `uv run --with mlx-audio mlx_audio.stt.generate \ --model mlx-community/VibeVoice-ASR-4bit \ --audio lenny.mp3 --output-path lenny \ --format json --verbose --max-tokens 32768` The tool reported back: Processing time: 524.79 seconds Prompt: 26615 tokens, 50.718 tokens-per-sec Generation: 20248 tokens, 38.585 tokens-per-sec Peak memory: 30.44 GB So that's 8 minutes 45 seconds for an hour of audio (running on a 128GB M5 Max MacBook Pro). I've tested it against .wav and .mp3 files and they both worked fine. If you omit --max-tokens it defaults to 8192, which is enough for about 25 minutes of audio. I discovered that through trial-and-error and quadrupled it to guarantee I'd get the full hour....

2. Tracking the history of the now-deceased OpenAI Microsoft AGI clause

Link: <https://simonwillison.net/2026/Apr/27/now-deceased-agi-clause/#atom-everything>

For many years, Microsoft and OpenAI's relationship has included a weird clause saying that, should AGI be achieved, Microsoft's commercial IP rights to OpenAI's technology would be null and void. That clause appeared to end today. I decided to try and track its expression over time on openai.com . OpenAI, July 22nd 2019 in Microsoft invests in and partners with OpenAI to support us building beneficial AGI (emphasis mine): OpenAI is producing a sequence of increasingly powerful AI technologies, which requires a lot of capital for computational power. The most obvious way to cover costs is to build a product, but that would mean changing our focus. Instead, we intend to license some of our pre-AGI technologies , with Microsoft becoming our preferred partner for commercializing them. But what is AGI? The OpenAI Charter was first published in April 2018 and has remained unchanged at least since this March 11th 2019 archive.org capture : OpenAI's mission is to ensure that artificial general intelligence (AGI)?by which we mean highly autonomous systems that outperform humans at most economically valuable work?benefits all of humanity. Here's the problem: if you're going to sign an agree...

3. Speech translation in Google Meet is now rolling out to mobile devices

Source: Simon Willison's Weblog | Published: 2026-04-27T17:37:47+00:00

Link: <https://simonwillison.net/2026/Apr/27/speech-translation-in-google-meet-is-now-rolling-out-to-mobile-d/#atom-everything>

Speech translation in Google Meet is now rolling out to mobile devices I just encountered this feature via a "try this out now" prompt in a Google Meet meeting. It kind-of worked! This is Google's implementation of the ultimate sci-fi translation app, where two people can talk to each other in two separate languages and Meet translates from one to the other and - with a short delay - repeats the text in your preferred language, with a rough imitation of the original speaker's voice. It can only handle English, Spanish, French, German, Portuguese, and Italian at the moment. It's also still very alpha - I ran it successfully between two laptops running web browsers, but then when I tried between an iPhone and an iPad it didn't seem to work. Tags: google , translation

4. Don't use localhost:3000, use your own custom domain

Source: iDiallo.com | Published: Mon, 27 Apr 2026 23:17:54 GMT

Link: <https://idiallo.com/blog/say-no-to-localhost3000-use-custom-domains?src=feed>

After presenting a demo of how an internal tool works, I was flooded with questions. Not about

the tool, but about why I had bought a domain just to run the demo. "Why didn't you use the staging server?" they asked. I was confused. I didn't buy a domain. I was running it locally. But instead of the URL being localhost:3002, it was a fully formed domain. www.internaltool.com. In fact, some people told me that they couldn't access the website on their devices. They thought I had to whitelist their IP to grant them access. To feel young again... Setting up a custom domain locally was common practice when I started web programming. But with the advent of Node.js (and rails?), everyone has resorted to just pointing to localhost with an incrementing port number. The main reason is that the webserver is often bundled into the application itself. It's easy to just run `npm start` and call it a day. However, if you have multiple long-term projects running locally, especially if they need to communicate with one another, then managing a mental map of ports like 3000, 8080, and 5173 quickly gets tiring. This is where my old school approach shines. By combining the system hosts file with a...

5. Rec League

Source: Daring Fireball | Published: 2026-04-28T00:48:30Z

Link: https://recleague.com/?lyr_campaign=df

My thanks to Rec League for sponsoring last week at DF. Rec League is a new app/social network for sharing what you're into. (Get it? The "rec" in "Rec League" is for recommendations. It's a damn clever name, and sometimes a clever name is half the battle.) It's really well done, with a great simple brand aesthetic and obvious navigation and mechanics. You can easily use Rec League just to catalog your own collections: restaurants, books, movies, gadgets, whatever. The social aspects are totally low key. You find people whose taste you dig and you follow them. When you see something you like you can favorite or just save it. That's it. It's an old-school social network where the point is just fun and surprise and sharing. Rec League was featured as the "Best New App" in the App Store, and one of their users called it "the only social media I feel better after using", which feels like a perfect description. It's just cool people recommending things they think are cool. I've already bought some stuff and added some movies to my watch list from using it, and I've started a little list of restaurants I recommend in Philadelphia. Download Rec League and check it out. I, uh, recommend...

6. Sponsor The Talk Show

Source: Daring Fireball | Published: 2026-04-27T23:42:25Z

Link: <https://daringfireball.net/feeds/sponsors/>

Weekly "sponsor the whole week at DF" spots are sold out until August 24. That's a great sign that sponsorships here work. But it's not so great if you have a product or service that you'd like to promote now, or soon, to the DF audience - savvy listeners and readers obsessed with high quality and good design. The good news on that front is that the sponsorship schedule for The Talk Show has openings, including for the next few episodes, starting this week and into next month. The general rule of thumb is that sponsorship spots on The Talk Show cost one-third the rate for the weekly spots on DF. I'm happy to work out deals a little lower than that for first-time sponsors. If you've got a product or service you'd like to hear pitched on America's favorite three-star podcast, get in touch. ?

7. Yours Truly on The Vergecast

Source: Daring Fireball | Published: 2026-04-27T18:46:32Z

Link: <https://www.theverge.com/podcast/917965/apple-ceo-cook-ternus-transition>

David Pierce: On this episode of The Vergecast, David and Nilay are joined by Daring Fireball's John Gruber to talk about their reactions to the news, the (mostly) smooth transition Apple seems to have pulled off, and what we should really make of Tim Cook's legacy as a product person. Really, the question is: Do we blame Cook for the Touch Bar, or do we blame him for not trying hard enough to make the Touch Bar great? I know that sounds like a joke but I really do think the biggest problem with the Touch Bar wasn't that the first crack at it wasn't good enough, but that they never took a second crack at it. Going back to dumb fiddly F-keys with functional icons printed on them was uncharacteristically lazy for Apple. ?

8. Looking at consequences of passing too few register parameters to a C function on various architectures

9. Pluralistic: The enshittification multiverse (27 Apr 2026)

Source: Pluralistic: Daily links from Cory Doctorow | Published: Mon, 27 Apr 2026 08:39:48 +0000

Link: <https://pluralistic.net/2026/04/27/analogs-and-analogies/>

Today's links The enshittification multiverse: It's a useful analogy. Hey look at this:

Delights to delectate. Object permanence: Every complex ecosystem has parasites; Prison for "attempted infringement"; When We Were Robots in Egypt; Golfing in The Blitz; Copyright vs privacy (NZ edn); GOP support for pedophile Hastert; EFF's music license; RIP Jane Jacobs; California is fanfic; DMCA v medical implants; "Burglar's Guide to the City"; Flaming river; Fantasy accounting. Upcoming appearances: Berlin, NYC, Barcelona, Hay-on-Wye, London, NYC. Recent appearances: Where I've been. Latest books: You keep readin' em, I'll keep writin' 'em. Upcoming books: Like I said, I'll keep writin' 'em. Colophon: All the rest. The enshittification multiverse (permalink) It's official: you have my consent and enthusiastic blessing to apply "enshittification" to things that aren't digital platforms! Semantic drift is good, actually:

<https://pluralistic.net/2024/10/14/pearl-clutching/#this-toilet-has-no-central-nervous-system>

With that out of the way, let's talk about how enshittification can be usefully applied to gambits that worsen something in order to shift value from the users of that thing to the...

10. Browsers, OCSP, and a view of the web in practice

Source: Chris's Wiki :: blog | Published: 2026-04-27T03:43:20Z

Link: <https://utcc.utoronto.ca/~cks/space/blog/web/BrowsersAndWhoCanChange>

I recently read Geoff Huston's Revocation of X.509 certificates , which in part talks about OCSP 's failure. One of the pragmatic reasons for OCSP being dead is that Chrome dropped support for it more than a decade ago. Specifically, Chrome's replacement for certificate revocation was for Chrome to have an internal set of revoked certificates . Recently, Firefox has adopted a similar approach (with a different technical implementation). One of my views of this is that it shows browsers recognizing and accepting that if they want something, they have to do it themselves and they can't rely on the behavior of outside parties, especially the behavior of a lot of outside parties. Another way to put it is that browsers can change themselves to get something done but they often have a hard time getting other people to change . OCSP had two groups of outside parties; Certificate Authorities for direct CA OCSP checks, and web servers for OCSP stapling, and in the end browsers clearly couldn't rely on either group. In my own experience, direct use of CA OCSP checks by Firefox failed so often because of problems with CA OCSP servers that turning it off was my first reaction any time I ran i...

11. The stages of package installation

Source: Andrew Nesbitt | Published: 2026-04-27T10:00:00+00:00

Link: <https://nesbitt.io/2026/04/27/the-stages-of-package-installation.html>

Suppose, hypothetically, that someone had been spending their evenings reimplementing bits of several package managers from scratch, not to ship anything but as a test bed for swapping different resolvers, index formats, and registry APIs in and out to see what actually changes. One of the first things such a person would want is a clean decomposition of the install command into stages with well-defined inputs and outputs, so that each stage can be replaced independently and so that it's obvious which parts need the network, which parts run untrusted code, and which parts are pure functions over data you already have. 1. Fetching metadata The

package manager talks to one or more registries to discover what exists: package names, the list of versions available for each, and the dependency constraints each version declares on other packages. This might be one big index file pulled down in a single request, as with a Packagist packages.json , RubyGems? compact index , or a crates.io index clone, or it might be per-package documents fetched on demand from something like the npm registry or PyPI?s JSON API. Either way, the only thing this stage needs is outbound network access to a kno...

12. Theatre Review: Hadestown ?????

Source: Terence Eden?s Blog | Published: Mon, 27 Apr 2026 11:34:27 +0000

Link: <https://shkspr.mobi/blog/2026/04/theatre-review-hadestown/>

Anai?s Mitchell has created something magical. I felt like giving a standing ovation after every song. Just pure theatrical joy delivered by a cast who know how to squeeze every drop of emotion from an audience. Perhaps it was sitting right at the front of the stalls, but the opening of Hadestown feels like dinner theatre; almost cosy in its intimacy. The first act is so busy - there are a ?

13. The Loop: everything has happened before, and everything will happen again

Source: Westenberg. | Published: Mon, 27 Apr 2026 22:38:38 GMT

Link: <https://www.joanwestenberg.com/the-loop-everything-has-happened-before-and-everything-will-happen-again/>

We keep replaying the same human mistakes -bubbles, strongmen, scapegoats, and panics -because the operating system in our skulls hasn?t updated in ten thousand years.

14. What I've been thinking about this weekend - More open questions, intelligence vs power, the problem of verification in science, the parallel discovery of Darwinism

Source: Dwarkesh Podcast | Published: Mon, 27 Apr 2026 13:51:32 GMT

Hodge podge of things I was thinking about this weekend.

15. Collective Speed Is Not the Summation of Individual Speed

Source: Jim Nielsen?s Blog | Published: Sun, 26 Apr 2026 19:00:00 GMT

Link: <https://blog.jim-nielsen.com/2026/collective-speed-isnt-the-sum-of-individual-speed/>

I?ve been thinking about speed which is why Chris Coyier caught my attention in his latest piece discussing how AI might be 10?ing the speed with which we code, but it?s not making our software 10? better: Faster individuals don?t make a fast company My mind immediately went to the 4?100 relay at the Olympics. (Not sure which race that is? Watch the London 2012 one .) Imagine you were put in charge of winning the 4?100 relay. All you gotta do is find the four faster sprinters in your country ? right? I?m no track and field expert, but I doubt it?s that simple. In a relay race, the baton is arguably the most critical element. Passing it cleanly is vital because if you fumble it you?re easily behind a few meters or maybe even disqualified. So, one could argue, a sprinter?s ability to pass and receive the baton is more important than speed because all the speed in the world won?t help you overcome a dropped baton. (There are other considerations too, like which leg each runner takes, which sequence works best given individual pairings and rapport, and whether a slower veteran might perform better in the heat of the moment.) Faster runners won?t guarantee a faster team. And faster cod...

16. Recensie: Een spoor van vernieuwing, door Arthur Docters van Leeuwen en Lars Kuipers

Reeds vorig jaar verschenen, maar zonder de aandacht gekregen te hebben die dit boek verdient. Uitgeverij Prometheus, 460 pagina?s. bol.com, amazon.nl & kindle ?Een spoor van vernieuwing? laat zich lezen als memoires van een markante topambtenaar, maar ook als een interessante geschiedenis van de ontwikkeling van de rampenbestrijding, de inrichting van de politie en de opsporing, de BVD (voorloper AIVD) en de oprichting en ontwikkeling van wat we nu kennen als de

AFM.

17. Practical Reed-Solomon for Programmers

Source: Bert Hubert's writings | Published: Sun, 13 Jun 2021 06:38:15 +0200

Link: <https://berthub.eu/articles/posts/reed-solomon-for-programmers/>

Recently I was doing some work decoding the new Galileo High Accuracy Service data. In short, this new service will allow Galileo (?European GPS?) users to achieve decimeter-level accuracy, which is nice. This ?HAS? data is transmitted highly redundantly by making good use of Reed-Solomon encoding. To work with this data, I attempted to learn more about Reed-Solomon and I found almost all explanations were useless to me - oodles of advanced math, but no guidance of how to use R-S in practice.

18. Corona Update eind mei 2021

Source: Bert Hubert's writings | Published: Mon, 24 May 2021 14:16:45 +0200

Link: <https://berthub.eu/articles/posts/corona-update-eind-mei-2021/>

Ja daar zijn we weer! De vorige update uit maart was getiteld ?Licht aan het einde van de tunnel?. Nou wil ik niet al te veel pochen, en resultaten uit het verleden bieden geen garanties voor de toekomst, maar het klopte allemaal best behoorlijk. De spectaculaire daling in ziekenhuiscijfers kwam in werkelijkheid een week later dan ik verwacht had. Ok. Ik wil graag mijn Facebook- en IRC-vrienden bedanken voor hun vele goede vragen en suggesties voor deze post - want er zijn nog genoeg goede vragen over.
